METHODS OF RESEARCH COURSE

!WELCOME TO THE WRITING PROCESS

In this step-by-step support area, you will find everything you need to know about writing a paper from start to finish.

Have you ever received a writing assignment, thought “this won’t take long” and then stayed up all night writing the night before your assignment was due because it ended up taking a lot longer than you thought it would? If you have, you’re not alone. Many beginning writers struggle to plan well when it comes to a writing assignment, and this results in writing that is just not as good as it could be. When you wait until the last minute and fail to engage in a good writing process, you’re not doing your best work—even if you did “get all A’s in high school” as a procrastinator.

Research on writing tells us that the best thing writers can do to improve their writing is improve their writing process! With that in mind, this area of the Excelsior OWL is going to take you through the steps of a thorough writing process—one that involves many stages that will help you become a better writer.

You will learn about the recursive nature of the writing process, and you’ll be taken through each step of writing a paper with instruction, activities, and videos. With support for prewriting activities, you’ll learn how to generate and organize your ideas, and with support for paragraph building, you’ll learn how to turn those ideas into well-organized paragraphs. You’ll also learn about how rhetoric can help make your writing stronger, and you can even get some advice from fellow students about what to expect in college writing courses. If you’re writing a paper and need help with any of the steps along the way, The Writing Process area is here to help.

Writing Process Overview

Do you know what a Slinky® is?

It's a toy that can serve as a metaphor for the writing process.

A Slinky is one piece of material that's coiled in many loops. Writing is a large process that's made up of smaller ones—processes that connect and loop around each other.

A Slinky, after the first nudge, travels down stairs on its own, step by step. An experienced writer, after the first nudge of an idea or observation, moves through the writing process step by step, with the option to loop back up the stairs as well as down.

Okay, that's as far as the metaphor stretches (and yes, that's a bad pun). But you get the idea through the visual example. Writing is a process.

Writing is the tangible result of thinking. And learning how to think—how to develop your own ideas and concepts—is the purpose of a college education. Even though the end result of writing is a product, writing itself is a process through which you ask questions; create, develop, hone, and organize ideas; argue a point; search for evidence to support your ideas...and so on. The point here is that writing really involves creative and critical thinking processes. Like any creative process, it often starts in a jumble as you develop, sort, and sift through ideas. But it doesn't need to stay in disarray. Your writing will gain direction as you start examining those ideas. It just doesn't happen all at once. Writing is a process that happens over time. And like any process, there are certain steps or stages.

These are some of the major stages in a strong writing process:

1. Thinking about your assignment
2. Developing ideas (often called prewriting)
3. Narrowing a topic
4. Gathering information
5. Ordering and drafting
6. Revising and editing

Developing Ideas

A person writing on paper. Writers need to have something to write about. In college, you'll be expected to provide your own observations and ideas. Even in a research paper on an assigned topic, you'll be expected to offer your own thinking about what your sources say. The purpose of writing in college is to show your own analysis and thought processes on the concepts that you're learning about.

Writers develop ideas in many ways, including the following:

Journaling

Freewriting

Brainstorming

Mapping or diagramming

Listing

Asking defining questions

Noting Pros & Cons

Narrowing a Topic

Once you have decided what you want to write about, you need to stop and consider if you have chosen a feasible topic that meets the assignment's purpose.

If you have chosen a very large topic for a research paper assignment, you need to create a feasible focus that's researchable. For example, you might write about something like the Vietnam War, specifically the economic impact of the war on the U.S. economy.

If you have chosen a topic for a non-research assignment, you still need to narrow the focus of the paper to something manageable that allows you to go in-depth in the writing. For instance, you might have a goal of writing about the nursing profession but with a specific focus on what the daily routine is like for a nurse at your local pediatric hospital.

The important thing is to think about your assignment requirements, including length requirements, and make sure you have found a topic that is specific enough to be engaging and interesting and will fit within the assignment requirements.

Gathering Information

It's easier to gather information once you have a relatively narrow topic. A good analogy is when you conduct a search in an online database. You'll get thousands (if not more) entries if you use the key words **Vietnam War** as opposed to fewer and more focused entries if you use terms related to economic impact of the war on the U.S.

Or, if you're analyzing *The Great Gatsby*, you'll be able to gather more specific information from the novel if you focus on a character, a theme, etc. instead of all elements of the novel at once.

It may help to use the image of a hand fan in order to understand gathering information. Think of your narrow topic as the end of the fan, the point at which all of the slats are linked together. As you gather information about your narrow topic, the fan spreads out, but the information is still all connected to the narrow topic.

Ordering & Drafting

Before you begin to draft, it can be helpful to create an outline to help you organize your thoughts. You can refer to the prewriting if you have organized thoughts already using a prewriting strategy, such as mapping. The important thing is to list out your main ideas, including your thesis, to help you visualize where you are going with your essay. An outline will also help you see before you begin drafting if your ideas will support your thesis.

The actual writing occurs after you have a focus and enough information to support that focus. Drafting involves making choices about how much information to offer and what information to put where. Your outline will be a guide, but you may find that you need to revise the order once you begin drafting.

Consider the following points as you draft:

- Is there enough information to provide evidence for your assertions? If not, circle back to gathering information.
- Is there a basic idea that needs to be offered first so that readers understand subsequent ideas?
- Are there related ideas that logically should be grouped together?

- Are there some ideas that are more important than others and, if so, what is the best place in the writing to emphasize those ideas?
- Are there logical linkages between ideas, so readers don't get lost moving from one idea to the next?

Drafting consists of building the paragraphs of your writing and linking them together. And, remember, your draft you create at this point is not your final draft. There are additional steps of the writing process to consider before you are ready to submit your work.

Revising & Editing Basics

Revising

Many students often try to lump revising and editing into one, but they are really two separate activities. **Revising** is about your content while **editing** is about sentence-level issues and typos. It's important to remember to allow yourself time to complete both parts of this process carefully.

Revision is about seeing your writing again. Revising is an important step in the writing process, because it enables you to look at your writing more objectively, from a reader's view. Set your writing aside for a time. Then go back to it and work from big to small as you ask and answer revising questions.

Basic Big Revision Questions—Ask These First:

- Are there places that are not **clear**?
- Are there places that need **more information**?
- Are there places that need **less information**, because the information seems to diverge too much from your main point?
- Does some of the information need to be **re-ordered** in order to make sense to a reader who may not have much background on this topic?

As you see, these basic revision questions concern themselves with the amount, clarity, and order of information. That's what the revision process is all about—making sure that your

concepts and supporting information are presented in the clearest, most logical way for most readers to understand.

Once you deal with the big things (amount and order of information), then you can move to the small things—the language, grammar, spelling, and punctuation.

Editing

Once you have your content the way you want it and have completed your revisions, it's time to think about editing your paper. When you edit, you are looking for issues with sentence structure, spelling, punctuation, capitalization, etc. And, when you edit, it's important to realize that it's difficult to catch all of these errors in one editing pass. A thorough editing process is one that involves several editing passes. Research on student writing indicates that most of the errors in college essays are related to careless editing. With that in mind, it's important to take steps to ensure you are engaging in a good editing process.

Questions to Consider When You Edit

- Is the **language** clear and easy to read and understand? Are difficult terms defined?
- Is the **sentence structure** clear and easy to understand?
- Are the sentences **grammatically correct**?
- Have I **proofread** and checked for typos and misspellings?
- What **errors** might my spell checker and grammar checker have missed?

The Research Process

An Overview

Writing a research paper is often the most complex writing task you'll engage in during your college career. The process of [locating sources](#), [note-taking](#), [drafting](#), and [editing](#) offers you the opportunity to delve into a specific question on a topic. The result can be deeply rewarding; when you finish a well-researched and well-crafted paper, you'll feel as though you truly own your material and your assessment of the topic as an expert.

In some classes, your professor will assign a topic. In other classes, you may be asked to choose among selected topics. And, sometimes, your professor may leave the topic entirely up to you.

Whichever strategy your professor uses, you'll need to know how to get started and how to ultimately create a polished piece of writing. For your paper to be successful, you need to think through the steps of the research process and make sure that you allow yourself enough time for all the stages of research and writing that will be explained in detail in the pages that follow.

It's important to remember that a good research and writing process is **recursive**. This means the steps are not always linear. For example, when you revise, you may realize you need to go back a few steps and add more research to your paper. Or, perhaps, as you edit, you realize you need to go back to the beginning, to the analysis stage, and reconsider your audience, as you think about the language choices you make. These steps are signs of a thoughtful research process.

Writing a research paper isn't hard if you're considerate of the process, plan carefully, and keep yourself on task.

Drafting & Integrating

You have done a lot of work so far, and, now, it's time to put all of that work together and begin drafting your research paper. Using your outline as a guide, you'll begin to develop your ideas and integrate your source information.

When you develop your essay, you'll be using your source materials to offer specific support for the points you're making. You're able to develop support using three different integration strategies:

1. **Summarizing** main ideas.
2. **Paraphrasing** supporting materials.
3. **Quoting** specific text.

Your authority as a scholar will be enhanced when you demonstrate your ability to use and integrate outside sources in a fair and attentive manner. By doing so, you help to demonstrate that you have carefully read and considered the material on your topic. Your reader sees not only your ideas alone, but also your points contextualized by the conversations of others. In this way, you establish yourself as one of the members of the community of scholars engaged with the same idea.

And, as you draft, remember that your writing doesn't have to be perfect. It is important to work to get your ideas down and your source material integrated, which will be discussed in this step of the research writing process. However, you still have other steps of the process, [revision and editing](#), which you'll use to polish your work.

Revising & Editing a Research Paper

Revising isn't the first step in the process of writing a research paper, but it is perhaps the most important. Many students skip the revision process, mistaking editing for revision. While editing is also very important, revision is an integral part of any good writing process. During revision, you should try to see your work from different perspectives and different angles. When you revise, it's particularly important to keep your target audience in mind. You may need to make changes to content and organization. You may have to go back to the research stage of your process to find more information. You may need to cut out information that doesn't relate to your thesis or focus. Revision is about making big changes to your writing to improve flow, development, and focus.

It's best to allow some time between drafting and revision. If you can take a break from your writing and come back to it a few days or even a week later, you're more likely to be able to see where you need to revise.

You shouldn't begin editing until you feel confident in your revisions. Once you feel your content is where you need it to be, it's time to begin a thorough editing process. Editing is about making changes to your sentences and surface features in your research paper. When you edit, you should check for things like grammatical errors, punctuation errors, spelling, and issues related to documentation.

Too often, students think that they can edit well with one pass or count on a grammar checker to "fix" everything, but to be a good editor, you should read over your essay many times yourself, each time focusing on a different issue. Grammar checkers are helpful tools are needed very much.

A good editing practice also involves spending extra time on the issues you may have had trouble with in the past. For example, if you know you have trouble with commas, you might review the guidelines on the [comma](#) in the [Grammar Essentials](#) area of the Excelsior OWL. Then, with those guidelines fresh in your mind, edit your essay, just paying attention to your use

of commas. You might then make another pass, just looking to make sure your in-text citations are correct.

Another helpful strategy is to read your essay in reverse, starting with your last sentence and going from there. This takes away the flow as you read your essay, will slow you down, and can give you an opportunity to see each sentence on its own.

Literature Reviews

The literature of a literature review is not made up of novels and short stories and poetry—but is the collection of writing and research that has been produced on a particular topic.

The purpose of the literature review is to give you an overview of a particular topic. Your job is to discover the research that has been done, the major perspectives, and the significant thinkers and writers (experts) who have published on the topic you're interested in. In other words, it's a survey of what has been written and argued about your topic.

By the time you complete your literature review you should have written an essay that demonstrates that you:

- Understand the history of what's been written and researched on your topic.
- Know the significance of the current academic thinking on your topic, including what the controversies are.
- Have a perspective about what work remains to be done on your topic.

Thus, a literature review synthesizes your research into an explanation of what is known and what is not known on your topic. If the topic is one from which you want to embark on a major research project, doing a literature review will save you time and help you figure out where you might focus your attention so you don't duplicate research that has already been done.

Just to be clear: a literature review differs from a research paper in that a **literature review** is a summary and synthesis of the major arguments and thinking of experts on the topic you're investigating, whereas a **research paper** supports a position or an opinion you have developed yourself as a result of your own analysis of a topic.

Another advantage of doing a literature review is that it summarizes the intellectual discussion that has been going on over the decades—or centuries—on a specific topic and allows

you to join in that conversation (what academics call academic discourse) from a knowledgeable position.

The following presentation will provide you with the basic steps to follow as you work to complete a literature review.

Step 1 – Develop a Good Research Question

Think about this question as the question you hope to answer as you research. You may need to do some preliminary research and prewriting to help develop a good research question.

If you have already developed a strong research question as a part of the research and writing process, you are off to a great start!

Step 2 – Identify Major Scholars or Text on Your Topic

Your professor and the librarians can help you get started.

Find out about the most important journals and/or books on your topic and look for some research there.

Journal articles can be the most helpful, as journals are where scholars in a field "talk" to each other, in a formal way, on key issues in their fields.

It can also be helpful to follow the references at the end of the important books or articles, which can lead to additional, credible resources.

Be sure your sources are current. This is especially important in fields like the sciences and the social sciences.

Step 3 – Remember to Read and Think About Your Research as You Go

You need to understand what you are reading and all the different aspects of your topic and its thinkers. Some of the material may be dense and difficult to comprehend. Stop and read the articles you find, so you can begin to comprehend key points in the research on your topic.

As you continue and read more about your topic, you will grow in your understanding of the topic and begin to develop ideas to answer your research question.

Step 4 – Take Careful Notes

As you read, you should annotate each source but also take notes about the main ideas of your sources. You should work to put the main ideas in your own words, as this will help bring you to a better understanding of the source and the overall topic.

You may also keep track of a few key quotes, but the goal will be to write down what you understand in your own language to help avoid issues with plagiarism.

Step 5 – Begin Drafting

NOTE: A literature review is an essay and should include a strong introduction, body paragraphs, and a conclusion.

GOAL: You should not only summarize your sources but make connections between the sources, identify major trends and controversies, and focus on your research question.

Your introduction should set up your literature review, and your conclusion might address what issues still need to be resolved or researched.

But, remember, the end of the research process for your literature review is not the end of your writing process. You should engage in strong revision and editing of your literature review, just like you would any other essay!

Writers often create annotated bibliographies as a part of a research project, as a means of recording their thoughts and deciding which sources to actually use to support the purpose of their research. Some writers include annotated bibliographies at the end of a research paper as a way of offering their insights about the source's usability to their readers.

Instructors in college often assign annotated bibliographies as a means of helping students think through their source's quality and appropriateness to their research question or topic.

Although it may take a while to complete the annotated bibliography, the annotations themselves are relatively brief.

Annotations may include three things:

1. A brief summary of the information in that source.
2. A brief evaluation of the quality of the source's information.
3. A brief evaluation of whether the source is useful for the **ips on Writing an Annotated Bibliography**

4. You need a **relatively narrow focus** (a relatively narrow research question or a working thesis sentence with a clear angle) in order to gain value from doing an annotated bibliography.
5. As you research, **select the sources that seem most related** to your narrow focus. **Skim the sources first**; then more carefully read those that seem useful to your research focus.
6. In your annotation for each entry in your annotated bibliography, **summarize the source**. Reproduce the author's main ideas in your own words. Be careful to change the wording and the structure as you put the information from the source into your own words.
7. After you summarize, **analyze the source**. Ask yourself questions such as the following: Is there enough relevant information to address my narrow focus? Does the author delve deeply into the subject as opposed to offering a general overview? What type of evidence does the author use? Does the author use statistical information accurately, to the best of my knowledge?
8. Finally, **evaluate the source's usefulness** to the narrow focus of your research. Make connections between the source and your focus for your project.
9. Be sure to **use the assigned bibliographic style** (usually standard MLA or APA style) to create the bibliography entry that starts off each annotated source on your list.
10. In most annotated bibliographies, your summary, analysis, and evaluation for each source becomes the body of your annotation for that source. Some annotated bibliographies may not require all three of these elements, but most will. Be sure to consult your professor and ask questions if you're unsure about the required elements within each entry of your annotated bibliography.
11. purpose of the research.

Putting It All Together: Research and Citation & Documentation

The research writing process is a "recursive" process. This means the process is

- one where writers often have to go back to earlier steps, even though there is a basic order.
- not a real process at all.
- always written using cursive writing.
- always linear and in a rigid order.

The best thing to do as soon as you get your research paper assignment is

- wait until the due date is close, as pressure helps you write better.
- analyze your assignment using rhetorical concepts to help you make good decisions throughout your process.
- take a break and rest, as you can always wait until the last minute.
- immediately draft your rough draft.

Although the internet is a great place to get ideas when you begin your research process, what is the best place to go for sources to *cite* in an academic research paper?

- Databases available through your college library
- Professional blogging sites
- Newspaper archives
- Online encyclopedias like Wikipedia

Select all of the correct answers.

When evaluating a source you're considering for your research paper, you must consider

- authorship and credibility.
- usability.
- timeliness.

When you're writing for a general academic audience, who are you considering as your readers?

- The general public
- Your classmates and professors
- Friends and family members
- Professionals in your field
- **Select all of the correct answers.**

When documenting source information in your text, you should include citations for which of the following types of information:

- summarized information.
- quoted information.
- paraphrased information.

When formatting your References or Works Cited page for APA or MLA format, it's important to remember the following:

- Your sources should be listed in alphabetical order.
- Your margins should be both right and left justified, so they are straight on both sides.
- Your source information should be single spaced.
- All of the above

Citation & Documentation

Welcome to Citation & Documentation!

Here you'll find extensive support for APA, MLA, and Chicago documentation styles. This section features instructional videos that show you how to set up your papers in APA, MLA, and Chicago formats, interactive checklists, and visual support for both in-text documenting and referencing at the end of your paper. If you're new to documentation or just need a refresher, the Citations & Documentation area can help.

Research papers at the college level will require some kind of documentation style. Documentation styles provide students, teachers, and researchers standards and specifications to follow for paper set up, in-text documentation, and references. They also will have recommendations for writing style, word choice, and in some cases, organization.

The most common documentation styles are [APA](#) (from the American Psychological Association) and [MLA](#) (from the Modern Language Association), and some fields require [Chicago Style](#) (from the University of Chicago Press).

While it may feel tedious learning the different aspects of a documentation style, it's important to remember following style guidelines helps add credibility to your writing by providing you with a structured method for sharing your research with your audience.

MLA Style | 8th Edition

MLA stands for the Modern Language Association. Most papers that use MLA formatting and citation style are those written in the humanities, especially in languages and literature. In 2016, the *MLA Handbook* was updated in an effort to simplify much of the documentation process in MLA format.

MLA Formatting: The Basics

Papers constructed according to MLA guidelines should adhere to the following elements:

- Double-space all of the text of your paper, and use a clear font, such as Times New Roman or Courier 12-point font.
- Use one-inch margins on all sides, and indent the first line of a paragraph one half-inch from the left margin.
- List your name, your instructor's name, the course, and the date in the upper left-hand corner of the first page. This is your **heading**. There is no cover page.

- Type a header in the upper right-hand corner with your last name, a space, and then a page number. Pages should be numbered consecutively with Arabic numerals (1, 2, 3, 4, etc.), one-half inch from the top and flush with the right margin.
- Provide in-text citations for all quoted, paraphrased, and summarized information in your paper.
- Include a Works Cited page at the end of your paper that gives full bibliographic information for each item cited in your paper.
- If you use endnotes, include them on a separate page before your Works Cited page
- Your Works Cited page at the end of your project should line up with the in-text citations in the body of your essay.

The following pages in this section will provide you with more information regarding MLA basic formatting, in-text citations, and the Works Cited entries. The information in this section follows the [*MLA Handbook*](#), 8th edition. MLA guidelines do change over time, so it's important to be aware of the most current information.

Avoiding Plagiarism

Welcome to Avoiding Plagiarism!

We know you have come to this tutorial because you are a serious writer who wants to write well — and correctly! You have probably heard the word **plagiarism** and would like to understand it better. You have come to the right place. In this tutorial, you'll learn:

- What plagiarism is
- How to recognize seven different kinds of plagiarism
- The correct way to use 'open access' materials
- The consequences of plagiarism
- How to avoid plagiarism by doing the following:
 - Citing sources correctly

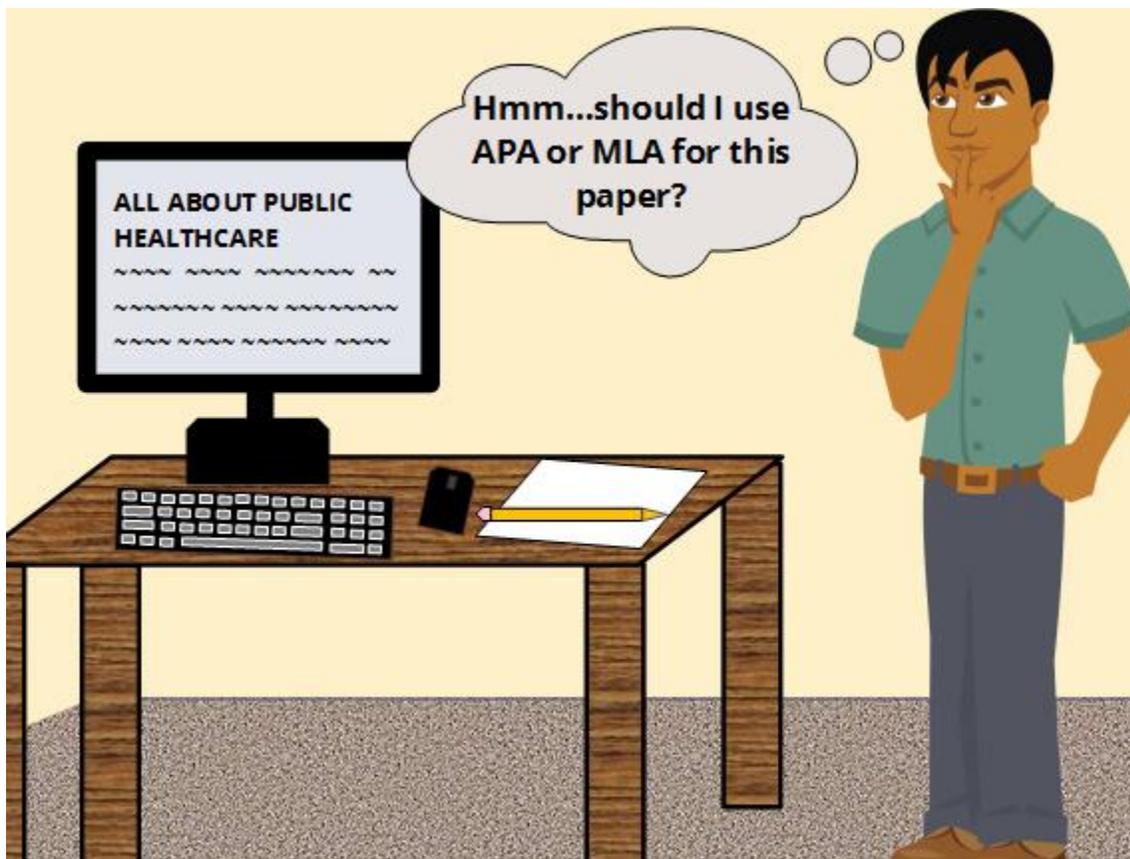

- Recognizing ‘common knowledge’
- Writing good paraphrases
- Writing good summaries
- Taking careful notes

How to Avoid Plagiarism

The best way to avoid plagiarism is to become a good writer! This requires a lot of hard work, and it takes time. So be sure to allow enough time to write your paper. Do not wait until the last minute!

On the following pages, you will see a series of specific suggestions on how to avoid plagiarism, including proper citation, paraphrasing, and summarizing.

How to Cite Sources

Direct Quotations

When you use the exact words of someone else in your paper, this is known as a verbatim quote. The words must be put inside quotation marks, and the source must be cited.

Example:

“Experience is the name everyone gives to their mistakes.” (Wilde, 1892).

NOTE: Direct quotations should be used sparingly. No more than 10% of your paper should be made up of direct quotations. When you want to use the idea but not the exact words, then use a paraphrase or summary.

Method of Citation

The citation may be made as an in-text citation, a footnote, or an endnote.

Example of in-text citation:

According to Levy (1997), the tutor-tool framework is useful.

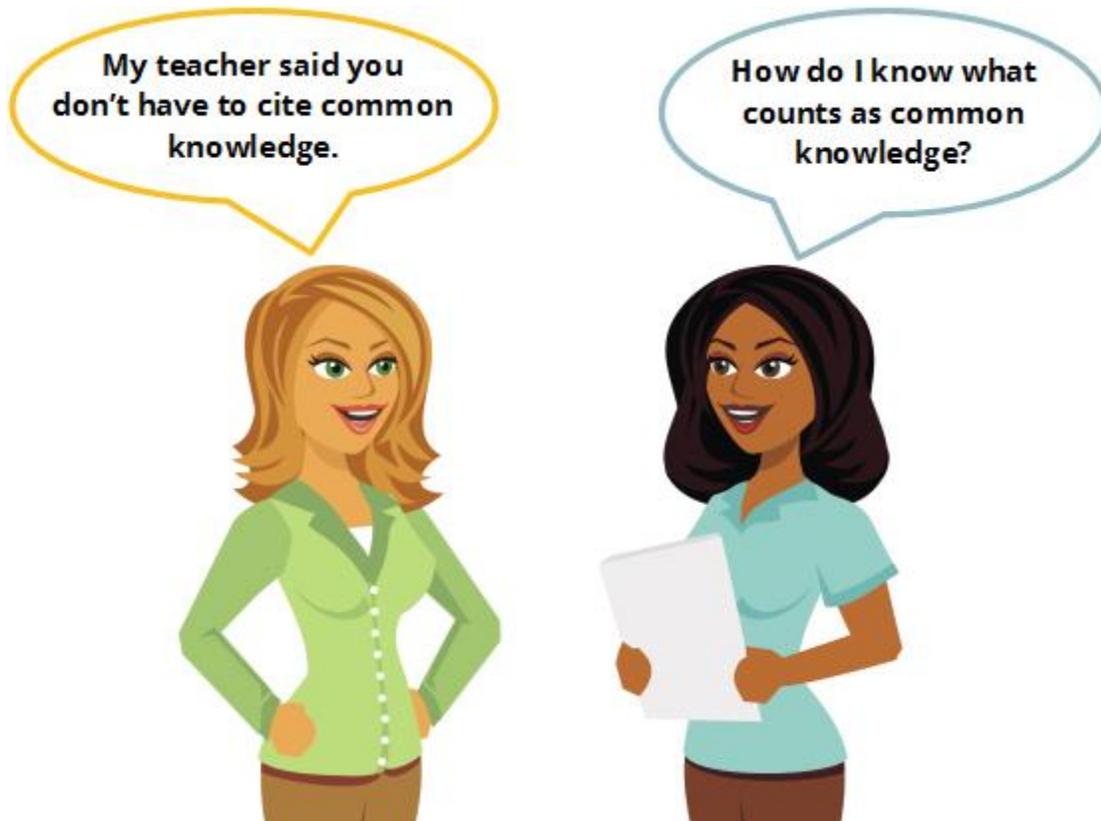

Example of footnote or endnote:

According to Levy, the tutor-tool framework is useful.¹

Bottom of page or chapter:

¹Michael Levy, *Computer-Assisted Language Learning: Context and Conceptualization* (New York: Oxford), 178.

Common Knowledge & Plagiarism

If information is very well known to most people, it may be considered “common knowledge,” and it does not need to be cited.

Examples of common knowledge:

- January is the first month of the year.
- Tokyo is the capital of Japan.
- The earth revolves around the sun.
- Soccer, or futbol, is a popular sport worldwide.
- Water freezes at 0 degrees Celsius.
- The Eifel Tower is located in Paris.
- Facebook is a social media network.
- An equilateral triangle is a triangle with three equal sides.
- The sun sets in the west.

- The Titanic was a ship that sank on its first voyage.

It is not always clear what “common knowledge” is. If the information is found in general references and if most people know it, it may be considered common knowledge.

However, what is commonly known in one field may not be known by the general public.

Paraphrasing & Plagiarism

When you paraphrase, you say something in different words. The length of your paraphrased text will be approximately the same as the original.

Original Example:

“Hand gestures, like other forms of nonverbal communication, can change the meaning of our words as well as carry meanings totally by themselves. Unless we understand the meanings attached to certain hand gestures in the different cultures, we are likely to send and receive unintended messages when dealing with people from other cultures. When two ordinary citizens from two different cultures miscommunicate through hand gestures, the result can be embarrassment or hard feelings” (Ferraro, 2001).

Paraphrased Example:

Both body language and words are used to convey meaning. Movements such as hand gestures can alter the meaning of spoken words, or be used alone to convey meaning. If we don't understand the meaning a person from another culture intends to convey through his hand gestures, and if that person doesn't understand the meaning of ours, there's a good chance we'll misunderstand each other and feel ill at ease or possibly offended (Ferraro, 2001).

Ferraro, Gary. (2001). *Cultural anthropology: An applied perspective* (4th ed.).

Wadsworth/Thomson Learning.

Summarizing & Plagiarism

When you summarize, you use different words and state the main idea of a passage. In the presentation below, you'll see some sample summaries to help you gain a better understanding of how to write an effective summary of a passage.

example

Original

"By custom, a Spanish woman retains her name after marriage. If, for example, a woman named María Fernandez marries a man called Antonio Rodriguez, her name becomes Señora María Fernandez de Rodríguez—the de implying, linguistically at least, that she is the property of her husband. The last names of their children, however, will be Rodriguez-Fernandez until the next generation, when the mother's last name (unless it is a famous one) is usually dropped." (Berlitz, 1982).

Summary:

A woman in Spain traditionally keeps her surname after marriage, adding "de" plus her husband's surname after her own, symbolically indicating she belongs to her husband. Her children use both surnames until they marry, usually dropping their mother's surname unless it is well known (Berlitz, 1982).

Berlitz, C. (1982). *Native tongues*. Grosset & Dunlap Publishers.

Note-Taking & Plagiarism

In order to avoid plagiarism, you should take careful notes as you do research for your paper. This presentation will give you some suggestions on taking good notes as you make your way through all of your source material.

Keep Track of Your Notes

Write down and store your notes on index cards, in a paper notebook, or in an app (e.g., Google Keep, Evernote, Simplenote, Notability, Zoho Notebook, Microsoft OneNote, and Apple Notes).

Use Quotation Marks When You Quote

In those places where your notes include verbatim (word for word) passages, be sure to surround them by quotation marks so that later on, you will know who wrote them.

PLANNING YOUR LITERATURE REVIEW

Writing a literature review will take time to gather and analyze the research relevant to your topic, so it best to start early and give yourself enough time to gather and analyze your sources. The process of writing a literature review usually covers the following steps:

1. Define your Research question
2. Plan your approach to your research and your review
3. Search the Literature
4. Analyze the material you've found
5. Managing the results of your research
6. Writing your Review

Defining Your Research Question

One of the hardest parts of a literature review is to develop a good research question. You don't want a research question that is so broad it encompasses too many research areas, and can't be reasonably answered.

Defining your topic may require an initial review of literature on your topic to get a sense of the scope about your topic. Select a topic of interest, and do a preliminary search to see what kinds of research is being done and what is trending in that topic area. This will give you a better sense of the topic, and help you focus your research question

In specifying your topic or research question, you should think about setting appropriate limitations on the research you are seeking. Limiting, for example, by time, personnel, gender, age, location, nationality etc. results in a more focused and meaningful topic.

Using an example from the Duke University Writing Studio, you may start with a general question:

Why did the chicken cross the road? This question is so general that you could be gathering relevant research for days.

A more precise research question might be:

What are some of the environmental factors that occurred in Pittsburgh, PA between January and February 2015 that would cause a chicken to cross Forbes Avenue? This research question is specific about a number of variables like time, geography, etc.

Questions to Ask

Some questions to think about as you develop your literature review:

- What is known about the subject?
- Are there any gaps in the knowledge of the subject?
- Have areas of further study been identified by other researchers that you may want to consider?
- Who are the significant research personalities in this area?
- Is there consensus about the topic?
- What aspects have generated significant debate on the topic?
- What methods or problems were identified by others studying in the field and how might they impact your research?
- What is the most productive methodology for your research based on the literature you have reviewed?
- What is the current status of research in this area?
- What sources of information or data were identified that might be useful to you?
- How detailed? Will it be a review of ALL relevant material or will the scope be limited to more recent material, e.g., the last five years.
- Are you focusing on methodological approaches; on theoretical issues; on qualitative or quantitative research?

How to Write a Literature Review

Learning how to effectively write a literature review is a critical tool for success for an academic, and perhaps even professional career. Being able to summarize and synthesize prior research pertaining to a certain topic not only demonstrates having a good grasp on available information for a topic, but it also assists in the learning process. Although literature reviews are important for one's academic career, they are often misunderstood and underdeveloped. This article is intended to provide both undergraduate and graduate students in the criminal justice field specifically, and social sciences more generally, skills and perspectives on how to develop and/or strengthen their skills in writing a literature review. Included in this discussion are foci on the structure, process, and art of writing a literature review.

What is a Literature Review?

In essence, a literature review is a comprehensive overview of prior research regarding a specific topic. The overview both shows the reader what is known about a topic, and what is not yet known, thereby setting up the rationale or need for a new investigation, which is what the actual

study to which the literature review is attached seeks to do. Stated a bit differently (Creswell 1994, pp. 20, 21) explains: The literature in a research study accomplishes several purposes: (a) It shares with the reader the results of other studies that are closely related to the study being reported (Fraenkel & Wallen, 1990. (b) It relates a study to the larger, ongoing dialog in the literature about a topic, filling in gaps and extending prior studies (Marshall & Rossman, 1989). (c) It provides a framework for establishing the importance of the study. As an overview, a well done literature review includes all of the main themes and subthemes found within the general topic chosen for the study. These themes and subthemes are usually interwoven with the methods or findings of the prior research. Also, a literature review sets the stage for and offers readers justifications for the purpose and methods of the original research being reported in a manuscript. Said a bit differently, “The literature review is where you identify the theories and previous research which have influenced your choice of research topic and the methodology you are choosing to adopt” (Ridley, 2008, p. 2).

The most common and most appropriate sources to draw upon and use as evidence in a review of a topic are articles found in academic journals and books. However, the availability of academic journal articles may vary tremendously depending on the research topic chosen. Other commonly accepted resources to use are governmental publications and newspaper articles to just name a few. The literature review needs to identify and discuss/explain all of the main points or findings of a specific topic. Also, both classic (if available) and the most recent studies need to be included to demonstrate an in-depth understanding of the topic at hand.

Why is it Important?

Literature reviews are important for a number of reasons. Primarily, literature reviews force a writer to educate him/herself on as much information as possible pertaining to the topic chosen. This will both assist in the learning process, and it will also help make the writing as strong as possible by knowing what has/has not been both studied and established as knowledge in prior research. Second, literature reviews demonstrate to readers that the author has a firm understanding of the topic. This provides credibility to the author and integrity to the work’s overall argument. And, by reviewing and reporting on all prior literature, weaknesses and shortcomings of prior literature will become more apparent. This will not only assist in finding or arguing for the need for a particular research question to explore, but will also help in better forming the argument for why further research is needed. In this way, the literature review of a research report “foreshadows the researcher’s own study” (Berg, 2009, p. 388).

It is important to keep in mind that it is not realistic to expect readers to be familiar with all of the relevant background and pre-existing knowledge about any topic. Scientific knowledge (about all topics) accumulates rapidly, and keeping up on any topic can be a challenge. This is not a new idea, three decades ago (Cooper, 1984, p. 9) argued:

Given the cumulative nature of science, trustworthy accounts of past research form a necessary condition for orderly knowledge building. Yet, research methods textbooks in the social sciences show a remarkable lack of attention to how an inquirer finds, evaluates, and integrates past research. This inattention is especially troubling today because the social sciences have recently undergone a huge increase in the amount of research being conducted ... (T)he need for trustworthy accounts of past research is also strengthened by growing specialization with the social sciences.

In regards to the professional importance of a good literature review for a manuscript that reports on the results of an original research project, it may be important to know that literature reviews are commonly focused upon components of manuscripts under review for publication. In a survey of criminal justice and criminology journal manuscript, reviewers Mustaine and Tewksbury (2008) reported that more than three-quarters (76.9%) of manuscript reviewers say that the quality of a manuscript's literature review is an important influence on their review. Similarly, surveyed criminal justice and sociology journal editors report that the literature review in a manuscript is a highly important aspect of a manuscript (Mustaine & Tewksbury, in press). And, when looking just at the content of reviews for manuscripts at the top tier journal *Justice Quarterly*, problems with literature reviews are the fourth (of nine) most commonly criticized portions of reviewed manuscripts, with fully 57% of manuscripts cited for problems in the literature review (Tewksbury & Mustaine, 2012). Interestingly, it is the graduate students and assistant professors who, as manuscript reviewers, are most likely to cite problems with reviewed manuscripts' literature reviews.

What Does a Literature Review Include?

First and foremost, literature reviews include a comprehensive overview of a general topic. For example, if there was a study on whether alcohol abuse leads to the tendency to commit violent crimes, then it would need to have an overview of substance abuse issues (not just alcohol abuse) and how such may influence all types of crime. First, the review of this literature should start with the general topic of substance abuse and how it influences committing all types of crime. Then, it should discuss different types of substance abuse (i.e. prescription drug abuse, alcohol abuse, etc.). Next, it would need to discuss the influence of substance abuse on general types of crime (i.e. petty theft, property crimes, violent crimes, etc.). Finally, it would need to focus on the primary subtopics of alcohol abuse (i.e. psychological affects, behavioral affects, etc.) and its direct influence on committing violent crimes. In essence, the literature review goes from a

broad overview to a specific focus by using subtopics of the general research question to guide the focus to a specific research question that the author wants to address.

One important characteristic of the review of the literature on a particular topic that is somewhat different from articles or manuscripts that report on the findings of individual studies is that whereas reports of individual studies almost always report findings that show the existence of a relationship, a literature review may conclude that there actually is not a relationship between particular concepts, variables, or issues (Baumeister & Leary, 1997). In this way, a literature review may be important for what it tells readers we know is not present in the social world.

Literature reviews can take on a number of different focuses that vary according to the type of research question that the review functions to set up in the current study. The primary focus will be related to the individual concepts of the general research question. However, how this is done will differ from study to study. Also, it is important that these concepts cover the entire (relevant and related) scope of previous literature pertaining to the current research topic, even if it does not directly coincide with it. When identifying and discussing/explaining these concepts, be sure to emphasize the findings of prior studies, or what the contribution to our knowledge about the topic is for each study. These reported findings should fall under the overarching concepts for the general research topic, and they should not be listed one after another. Rather, a literature review should educate the reader about what individual studies have contributed to our accumulated knowledge, but do so with a focus on discussing concepts or themes or types of issues related to the general topic. Generally speaking, literature reviews will have one of the three types of focuses (Cooper, 1984). Reviews may be integrative (summarizing past research based on overall conclusions of the past research), theoretical (identifying and critiquing the ability of different theories to explain a phenomenon, or methodological (highlighting different methodological approaches used in past research and the contributions of each type of research) in focus.

Regardless of the specific focus, it is crucial that there is a flow throughout the literature review, connecting the concepts somewhat seamlessly. A common error that reflects a mistargeted literature review is to string together a series of sentences or paragraphs that tell the reader study A found this, study B found this, and study C found this. A literature review should not read like a series of annotations about individual studies/articles. A literature review must have a clear focus on what the research question is that is going to be studied, and the organization of the discussion should lead the reader from the very broad general topic down to

the specific issue about which a manuscript is going to report a new piece of research. In this way, by the end of the literature review, the reader should have a solid understanding of what is already known about the topic, what is not yet known, and therefore a good idea of what exactly the current study is going to examine, and why.

What are Qualitative and Quantitative studies?

All research studies fall into one of two basic categories. These are the two categories of qualitative and quantitative studies. Qualitative studies are typically those that wish to gain understanding regarding the interactions that take place within a certain social world. For example, someone wanting to study how gang leaders function in their world, how they interact with others (including gang members, leaders of other gangs, and regular people) and how they perceive their role in the community would find that a qualitative approach would be best. Some of the most common ways to conduct a qualitative study are observation, participant observation, and interviews. It is best to think of qualitative studies as wanting to understand the actual ways that a social world functions and how the participants in a particular social world go about living, working, interacting, and feeling about their place in that setting.

A quantitative study is where researchers typically want to identify whether or not a statistical relationship exists between variables and how strong or prevalent such a relationship is. For example, if someone wants to understand the relationship between individuals' level of education and their tendency to commit property crime, then they would most likely have to examine this relationship through the quantitative approach. The most common way that this study would be conducted would be to use a survey or to construct measures of educational achievement and crimes committed from official sources, and then conduct statistical analyses to identify any potential relationships between the variables of education and crime type. Surveys in criminal justice and criminology official records are the most common form of data used for statistical analysis in quantitative social science studies. Whether the project at hand is a qualitative or quantitative study has a strong influence on the general design of the literature review that accompanies the reporting of a study (see Randolph, 2009). The research question typically dictates what type of methods a study will have to use (i.e. qualitative or quantitative). This topic will be addressed in further detail in the section below.

Differences Between Writing Literature Reviews for Quantitative and Qualitative Studies

Qualitative

Whether the research question is qualitative or quantitative, heavily determines how a literature review should be constructed. For qualitative research questions, literature reviews need to focus on how a research question—that is usually broader than a hypothesis to be tested in a quantitative study—is shown to be needed to be addressed. This means that in a literature review for a qualitative study, there needs to be an all inclusive approach to the general research topic. In continuance with the above example, if the research question is how alcohol abuse influences the tendency to commit violent crime, then it would be necessary to include the general theme of substance abuse and how it influences committing all forms of crime. Additionally, there needs to be only a minor degree of focus on the methods of previous studies and more focus on the specific findings of prior studies. This is a key difference between qualitative and quantitative that will be discussed in further detail in the quantitative section.

It is also important to discuss whether or not prior quantitative studies have been conducted on the current research topic. If there has been, then it is essential that there is a discussion or an explanation of why it is important for the research question being set up by the literature review to use a qualitative approach instead of a quantitative approach. This will help strengthen the argument for the current research and convince a reader that the new study being reported on is in fact important and contributing to the accumulation of knowledge about the topic at hand. Remember, although different, the two types of studies (quantitative and qualitative) can greatly strengthen each other and work together to provide a more complete understanding of the desired research topic.

It is also important to remember that each research type has its own set of limitations. For qualitative studies, the limitations generally are related to particularistic (i.e. small) samples or perhaps even a small scope of settings that are examined. It is often the case with qualitative studies that the literature review will borrow from several different themes or arguments to construct one all-inclusive theme. This all-inclusive theme will help in demonstrating why a new approach that prior studies have not done or completed is needed. By drawing on multiple themes/arguments, it will simultaneously strengthen the argument being made throughout the current study and give confidence to the readers that the current topic has been researched in great depth.

Quantitative

Literature reviews for quantitative studies need to discuss both what previous studies pertaining to the research topic have found/concluded and how such studies were done in terms of the specific variables used and the operationalizations of key (especially dependent) variables. Reviews used to introduce and set up quantitative studies also focus more heavily on the methods used in prior studies when compared to qualitative studies. The methods that need to be present in the literature review are both those that in previous studies are common as well as those that represent new “advances” in how to do a particular conceptual definition, measurement, or analysis. This will primarily depend on the specific variables and how prior research has been conducted on the research topic.

It may be best to think of quantitative literature reviews as defining and describing the shapes of pieces of a puzzle in order to construct the complete focus of the intended research topic. Here, the literature review will need to show how particular variables and/or findings are common (or not) across the field of existing studies about the current research topic. By providing documentation of particular variables and findings, this approach facilitates readers having more confidence in the validity and reliability of the findings in the current study.

Now that it is clear that literature reviews vary depending on the type of research question being investigated by a study, it is necessary to discuss the process of outlining. Outlining is perhaps the most important step in writing a successful literature review. Having a well-thought and planned outline will assist in searching for necessary types of information and sources, save time while writing, and allow for a clearer and stronger argument for readers.

Although most people hear the word “outline” and become worried and overwhelmed with properly ordering ideas, being certain they have a point #2 for every point #1, being sure that a subpoint A is followed by a subpoint B, etc., such strict structures are not necessary. Outlines are important, for as Machi and McEvoy (2009, p. 134) explain: “Outlining serves three purposes. It acts as (a) a mechanism for integrating and transforming ideas, (b) a mechanism of sequencing those ideas, and (c) a general plan for the composition.” The outline is simply the map of what you intend to discuss, and how.

The first step in creating an outline is choosing a general topic to study. This topic needs to be general because choosing a limited topic at the outset might severely reduce the amount and quality of sources to be found, and might even lead to wasting a fair amount of time. The key is choosing something of interest without too specific of a focus. For example, if one’s

interest was in felon disenfranchisement, they would not choose only felon disenfranchisement as the topic to be reviewed. This is too narrow of a topic that is likely to yield a relatively small body of work and sources to draw upon, and therefore, will be too limiting in allowing the writer to establish an overview of the topic.

As a result, it would be more appropriate to focus on a topic such as collateral consequences of felony convictions. These are two subcategories that are somewhat broad, but not too much to where it will hinder the process of identifying and discussing existing knowledge and sources of information. Also, each subcategory has several different subtopics/themes within that could be the focus of an entirely new study. It is also important to remember that it is okay to modify, revise, or refocus the topic after initially choosing one. This is a natural progression of developing an outline. New ideas and research questions will likely emerge throughout the entire outlining process, perhaps even when it is thought to be nearly complete. This emergence of new ideas and research questions will do nothing but strengthen the scope and soundness of the argument for the current study.

The second process in outlining is adding evidence to the general topic, leading to a more specific focus. This will also become a natural progression from finding what the general topic will be from the previous step and reading the available literature that addresses the general topic. Think of this process as similar to building a puzzle. Each source for the general topic will likely lead to several other useful sources with their own set of themes or subtopics, each being their own puzzle piece, until the entire picture is visible.

These sources will also likely present nearly all of the subtopics for the relevant topic, and will set the parameters for guiding where and how to look for other applicable sources. It is also important to note that all of the evidence needed to produce an adequate literature review will very rarely be found prior to the beginning of the writing process. As with finding other relevant sources, this is a natural progression of the writing process. New ideas will likely appear, and gaps that need to be filled will become more apparent once writing begins. This introduces the notion of the outline as being a “living” or “fluid” document. It not only is acceptable to constantly be altering the outline once an initial draft has been formed, but doing so is expected. Additionally, if an outline does not change once the writing process begins; it likely is going to be a weak literature review with several noticeable flaws——because the writer failed to pursue and include ideas and areas of knowledge that emerged in the writing process. Writers of literature reviews need to embrace the “living” nature of the outline as each minor change is leading to a stronger and more complete literature review. Similarly, when later working with

your outline and actually writing sentences, paragraphs, and sections, the process of revising and moving portions of text to different locations is natural and expected. Here, it is useful to think of the overall writing process in the way suggested by Machi and McEvoy (2009) who distinguish between the process of Writing to Understand and Writing to be Understood. The first is the goal of your outline and initial drafting of your manuscript. Once you have things down in a way that you can understand, your task shifts (in your revised and final drafts of a manuscript) to writing in such a way that a reader can and will understand.

In the outlining process, once the initial subtopics and themes for the general topic have been identified, the next step is to simply place them in a logical order. In other words, the subtopics need to be sign posts that direct the reader from the broad theme to the specific focus of what the current study will be about. The first type of sequence can sometimes come from the main topic itself as to what flow it will take. For example, if the current research topic is about whether juvenile substance abuse rehabilitation centers reduce recidivism, then the literature review could start with a brief history of juvenile substance abuse centers.

The brief history section would then be followed by, current numbers of juvenile substance abuse centers, known benefits of these programs, programming impact on recidivism, and what variety of centers are most successful in reducing recidivism. A different type of sequence for a literature review can be based on the commonality of themes. An example of organizing the literature review from most common to least common is doing a quantitative study on the relationship between education level and the likelihood of committing violent crimes.

The literature review would briefly introduce and discuss the idea of education and the influence of education on committing crime, then change focus from what the existing body of knowledge has established as the most common ways that education influences crime to the least common methods. As the ways by which education influences crime commission are chronicled within the discussion of each “way,” where there would be shown the studies that establish/support this as a means by which education influences crime as well. A third type of sequence is going from most positive issues to the most negative issues (or vice versa).

An example of this approach is when evaluating successful sex offender reentry programs to list the most successful programs to the least successful programs, and within the discussion of each type of program identifying and showing what previous research has established the fact that each particular type of reentry program is (or is not) successful. In this way, the literature

review functions to establish and support the need for the research question for the present study. Although each type of sequence is useful, choosing the correction sequence will largely depend upon the current research question.

As stated above, it is important to remember that outlines are “living” or “fluid” documents. The outline may seem complete, but obvious weaknesses may appear once the writing process of the actual literature review begins. It is inevitable that the subtopics, themes, organization, content, and even the main topic itself may all change throughout the writing process. Even though this may initially seem discouraging, it is as vital of a part to the writing process as writing itself. If time allows, it is helpful to develop the outline and let it sit a few days to help to make sure nothing obvious has been overlooked.

Sources

With the outline being the foundation, sources serve as the building blocks that construct the walls of the entire structure of the literature review. Adequate sources not only tell the reader about prior research regarding a topic, they also inform the author of prior research findings. Finding and reading the sources is an extended process of developing the themes and subtopics of what will be included within the literature review. Also, they help expand and elaborate upon the general research topic. However, it is essential to know where the sources are located, and which sources are acceptable to use in the literature review.

Where Are Sources Found?

Sources can be found in a number of ways. The main way is through the online databases at any university or college library website. These databases are usually searchable through the traditional Boolean search process that allows the user to enter key words of themes pertaining to the topic, resulting in a return of resources that the particular institution may have. This database primarily will feature academic journal articles that the library either does or does not subscribe to, and increasingly common with articles being available in digital format for download instantly. Although the majority of recently published articles are typically available for download, the availability of downloadable digital copies will vary from institution to institution, and from source to source. Remember that even if a library does not have a digital copy, they may very well have a physical copy of the journal in the library. At this point, it would be best to make a photocopy of the physical journal article at the library in order to be able to do work outside of the library. Also, this will allow for future reference to the article if at any point certain findings within it need to be clarified.

Most university libraries also have a system called Interlibrary Loan. This system allows for a network of libraries—often state school networks—to share their resources among one another. This becomes extremely helpful since most institutional libraries do not have every single journal subscription, article, and/or book needed. Each institution has their own way of requesting documents through Interlibrary Loan, but they usually take no longer than a few days to be available for pickup. This is why it is a key that if a literature review is due for a class that the project is planned and sources are found well in advance of the due date to avoid issues if Interlibrary Loan is needed.

Other sources, such as books and newspaper/magazine articles can also be found through online databases. These databases will usually disclose whether or not the institution has what is needed, and at many libraries it will also provide a link to the Interlibrary Loan to request the exact item. Alternative databases should be used with caution; however, they can still be helpful. Databases such as Google Scholar have become extremely useful resources that may allow access to journals that may not be possible through an institution's library.

What Types of Sources are Appropriate to Use?

There are a number of appropriate types of sources that can be utilized to make and support an argument in a literature review. Sources can be thought of as having varying degree of value, or “strength,” in a literature review. Berg (2009, p. 389) listed the potential sources and their relative value in the order of:

- (1) Scholarly empirical articles, dissertations, and books.
- (2) Scholarly, nonempirical articles and essays.
- (3) Textbooks, encyclopedias, and dictionaries.
- (4) Trade journal articles.
- (5) Certain nationally and internationally recognized “good” newsmagazines.

The top two most appropriate sources are academic journal articles and academic books (not textbooks). Although textbooks can be helpful for identifying basic information, they should not be used as citations in literature reviews (although, they often cite or discuss major or classic studies about a topic). Therefore, it is most appropriate to use academic journal articles and books. The number and quality of these two types of sources will vary tremendously from topic to topic.

Other appropriate sources are government publications (i.e. gray literature) newspaper articles, and magazine articles. Government publications typically cover program evaluations of certain programs operated by government agencies and even up-to-date statistics on particular governmental agencies. For example, the US Department of Justice, Bureau of Justice Statistics ([http:// www.bjs.gov](http://www.bjs.gov)) is an excellent source for governmental publications, especially when seeking the most recent statistics regarding specific crimes, criminal justice processes, populations, or governmental programs. Another excellent resource for criminal justice related documents is the Department of Justice website (<http://www.justice.gov/publications>). Other common types of alternative sources——newspaper and magazine articles——should be used sparingly and when no other information can be found. For example, if the current research topic is on budget cuts to juvenile substance abuse programs and anecdotal evidence is needed to support a theme found in research, then a newspaper/magazine article might be an excellent source to make this point. However, these supplementary sources should be used sparingly and with caution because heavily relying on these sources may send a red flag to the reader that (A) there may not be enough known about the current research topic to do any sufficient in-depth studies and/or (B) the literature review may have been constructed poorly (especially if other sources do exist and are not used). Therefore, it is crucial that a delicate balance is found and that alternative sources——such as newspaper and magazine articles——are only used when necessary. When in doubt, it is safest to use academic journal articles and books when available.

Inclusion of Classic/Major Pieces and More Recent Studies

The extensiveness of the available literature will vary tremendously from topic-to-topic. An example of this is comparing the availability of literature for a research question pertaining to social learning theory vs. a research question regarding computer privacy. In this case, it is purely a matter of the date when the research or issue began. However, the availability can be for several reasons. Other reasons for there being only a minimal amount of research available to draw upon include that perhaps the selected topic is a difficult subject matter——such as sexually deviant behaviors——that may have less research on them due to Institutional Review Board difficulties, lack of interest on the part of researchers, or stigmas attached to those who do such work or even legal and ethical reasons that limit the number of studies done on a topic. Obviously, other topics, such as stress experiences of law enforcement officers are likely to have much more research available. Therefore, it is vital that prior to beginning the outlining/writing process that the availability of sources is taken into consideration. Additionally, it is important

to assess what kind of a timeline is possible to establish for a topic; if something is truly a new phenomenon (such as, say the use of cell phones in prisons) there will be less available literature to work with than for a more established topic that has been a focus of research for a longer period of time. It is not necessary that this timeline is written down; however, it can do nothing but help in conceptually placing the available information on a continuum for clarity sake.

Although it is important to include a mixture of classic and more recent studies in the literature review, there also exists a balance that will vary from topic-to-topic. The best framework to follow when deciding what/what not to include in the classic studies is to only include the cornerstone research of the topic. For example, if the current topic was the stigma of being labeled a convicted felon and the social disenfranchisement that can accompany that label, then it would be necessary to include Erving Goffman's *Stigma: Notes on the Management of Spoiled Identity*. In addition, it may be useful to include Herbert Blumer's works on Symbolic Interactionism Theory that deals with how individuals use symbols and verbal/nonverbal cues to interact and communicate with one another. By including classic pieces of research, it demonstrates to readers that the author is well versed in the literature and has consulted most prior literature when forming their research topic. Additionally, this is a vital part of the learning process that will help in learning the material throughout to better form the argument and be confident in continuing with the current research question.

The inclusion of the most recent research is as vital, if not even more important, than the inclusion of classic pieces. This is because it shows that the author has consulted the most recent literature, and that the most up-to-date methods have been used or perhaps that the specific focus of the current study has not been examined previously. Consulting prior work is crucial because there is a strong possibility that someone may have already done the research question that was going to be examined; however, this does not mean that one cannot continue with the current research question. This may mean that one would have to look at a different angle of the research question, or perhaps simply examining an area that was omitted in prior research. Ultimately, the inclusion of the most recent research is just as important (if not more so) to demonstrate to readers that prior literature has been consulted in the formation of the current research topic.

What Needs to be Included from the Cited Studies?

First and foremost, the findings of the prior literature need to be the bulk of what is included from the cited studies. Again, this may vary for each research questions; however, this will almost always be the case. It is best to think of findings as providing the "big picture" of

the current research topic. Each theme and subtopic needs to be supported by as many findings known regarding the current topic. Findings of studies in journal articles are almost always found under the “findings” or “results” heading located in the second half of the journal article. For books, the location of findings varies, but they are usually located under the relevant chapter heading from the table of contents. as possible, so that both the author and the reader can have the entire picture of what is The literature reviews of other research can also be a valuable source in gaining insight into other relevant literature, themes/subtopics of the research question, and information regarding other sources. If citations are found through reading the literature reviews of prior research, it is important that the citations are double-checked to ensure that they were correctly cited in the original document. Also, the newly found resource may have other pertinent information that was left out of the literature review where the source was found. It is even possible that the additional citations revealed by reading additional literature reviews will bring awareness to a hole in the outline or even a missed theme. Remember that this is alright; this occurring will only further demonstrate the “fluid” nature of the “living” document that is the literature review being written.

Although the majority of literature reviews will focus on the findings of prior research, there are times where literature reviews need to focus on the methodology of prior research. This instance is typically found in studies that want to advance a new method for studying a certain topic or suggest a new way of defining a critical concept/variable. An example of this is a study that wants to advance a different way of statistical analysis. This study would need to primarily focus on the methodology of prior research since it is the subject of the current research question.

Here, it is a simple substitution of the methods for the findings in what is presented to readers. Similarly, if a literature review is being written to set up a study of sexual victimization of prison inmates in which a new way of defining “sexual victimization” is used, it is important to review how previous studies have defined the concept, focusing on what is and is not included in the definitions previously used. Even though substituting methodology for the findings may seem to be a radically different approach to reviewing literature, it is essentially the same idea and process, just with a different aspect of previous work as the focal point. Whereas the previous examples showed organizing findings to make an argument of what prior studies have not examined, this type of literature review makes the same type of argument discussing what prior methodology is/has not been capable of doing. By showing what prior methodological weaknesses exist, this helps establish the argument that a new way of doing methodology or perhaps an entirely new methodological concept is needed.

Theory

Theory is a highly developed form of reasoning for why certain events occur. In the criminal justice field, theory typically applies to ideas of why people commit crime and how the criminal justice agencies function. It is best to think of theory as the conscience behind the reasoning, methods, and what is ultimately found in the current study. Theory helps inform nearly all aspects of not just the literature review, but also the methodology and how to ultimately interpret the findings of the study.

The use of theory is not universal across all literature reviews. One example of a type of literature review that does not need to include a large discussion of theory is when a research question is new or in the early developmental stages. This can be the case even more so in exploratory work; however, this depends on how specific the topic or research question is. If theory is used, it is important that it is at least introduced and the reader told what the guiding perspective is for the study in the first few paragraphs of the literature review. This is important so as to establish a conceptual framework for the remaining portions of the literature review. It is best to think of theory in this sense as a lens to view the entire work through. This will help set up how and in what light the prior literature will be evaluated.

After the theory is briefly introduced, it is important to be reintroduced after a general overview of the topic has been discussed or outlined. This will allow the reader to have a broad understanding of the research question for the particular literature review without bogging them down with the theory as soon as they begin to read it. In this way, both the entire literature review and any actual section devoted to discussing a particular theory in specific can be thought of as “the theoretical core of an article” (Kotze, 2007, p. 19). Next, the theory needs to be discussed in depth, and explicitly shown as relevant to the topic at hand after the broad overview, in order for the reader to have the proper lens to analyze the prior findings or employed methodologies.

It is similar to think of this as expecting someone to play football who has never been exposed to the rules of the game before. They need to know how the objective of the game, how the game is played, what rules the game follows, and how their position fits into the big picture of the game. The best way to ensure that information overload does not occur is to provide a general overview of the theory, and then specifically how it applies to the current research question by informing or providing the framework. If these two concepts remain the focus, then the chances of overloading the reader with too much information is greatly reduced.

There are two directions that the theory section can take once an overview of why the theory pertains to the current research topic has been discussed. The first possible direction is to show why the theory that has been used in previous studies needs to continue to be used in the same fashion. Another option is how and why this theory is a productive way to approach the current topic and research question. The second possible direction is to argue why a new theory should be used and the shortcomings of other theories. If the latter direction is chosen, arguments are made best if they are done so simultaneously. The primary way of ensuring this is if one gives strong support for one particular theory, then this will simultaneously weaken the opposing view.

Funneling Idea

As has been alluded to throughout this discussion, it is best to think of the literature review collectively as a funnel that starts out as a big opening and travels to a much narrower, finite end. In essence, this means that the literature review needs to go from broad to specific. The broad beginning needs to open with a general research question, and then each theme/subtopic needs to naturally narrow the focus to a specific research question that will be addressed in the present study. After beginning the literature review by introducing the overall general idea, briefly discuss why the topic is important and why more research needs to be conducted. The introduction also needs to include a preview of each dimension of the topic that will be discussed in the following paragraphs.

After the introduction, each theme/subtopic needs to be placed in a sequential order that makes logical sense. This sequential order will vary from study to study, but it will need to assist in narrowing the focus purely by the themes or headings used. A helpful way of determining if a logical sequential order has been achieved is to examine the outline of themes/subtopics to see if these headings alone lead to the desired focus of the current research topic. If the order and flow of the themes/subtopics goes from broad to narrow with the desired outcome, then a correct order has been achieved. If not, then experiment with reordering some of the concepts, or perhaps return to the prior literature to see if there is a theme that was overlooked, or a logical order that others have used and could be replicated.

This will help ensure that a key piece of information that will distract the reader if not discussed will be included. Next, introduce the concept, briefly point out the relevance of the concept, and discuss what is known about it. Each theme or subsection needs to be ended by connecting it to the topic immediately following the current concept. It is best to think of this as

welding the pieces of a stairway together. Each weld needs to be as smooth as possible so that someone later examining the finished product cannot identify weaknesses in connection that may lead the stairway/discussion to collapse. Also, it is vital that these topics are placed in a logical order to both convey to the readers the intended argument and to demonstrate a firm understanding of prior literature to the readers. The “funneling concept” will assist in forming the literature review and making a coherent argument throughout the entire work.

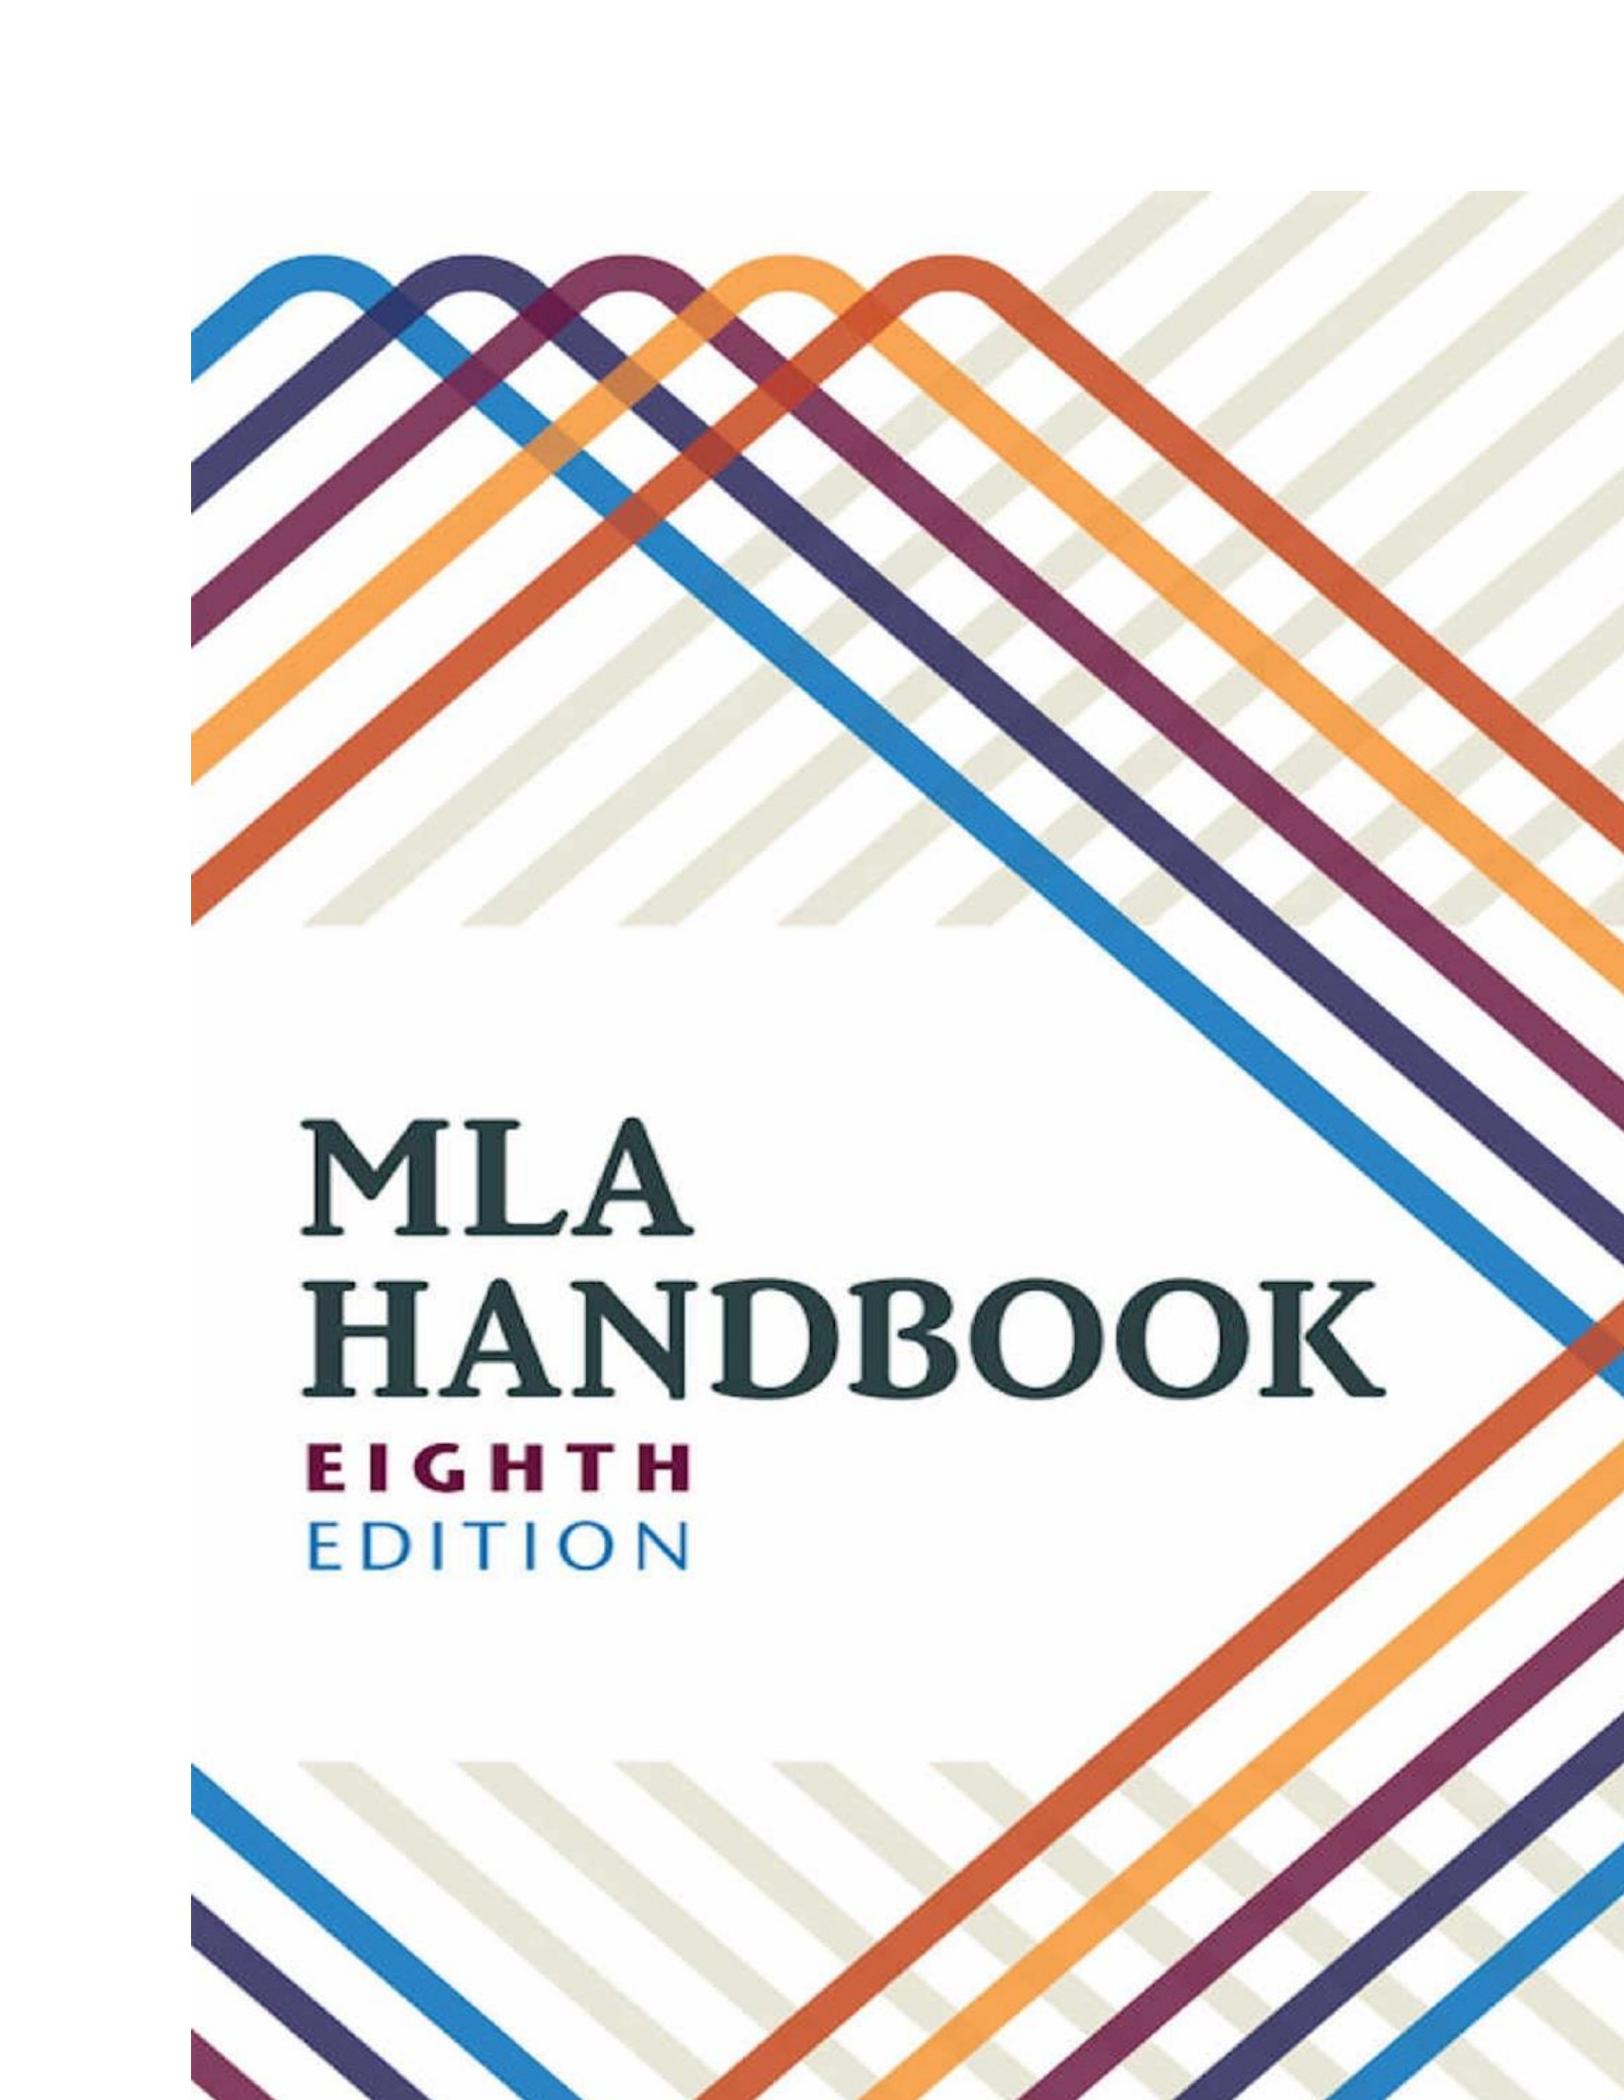

What is the Appropriate Way to End a Literature Review?

The end of the literature review serves as the bridge to the current study. Therefore, it must be a clear and concise summary of what was present in the literature review without getting bogged down with the extensive and too-specific-to-be-useful details. There needs to be a delicate balance between the primary findings/methodology of prior studies and demonstrating the need for the continued study of a certain research topic or perhaps a new way of methodology.

Up until this point, the argument of what the present study is examining has been demonstrated in providing the weaknesses or gaps in findings or the strengths/shortcomings of the methodology of prior research. However, it is at this point where the weaknesses in findings or the methodology of prior research are explicitly stated. Think of this as a criminal prosecutor spending several days describing to a jury that an individual is guilty of a crime. The prosecutor may have had several days to present their belief in the guilt of the individual to the jury (and do so by introducing then discussion/detailing individual pieces of evidence), but then at the end (in the closing argument) they need to summarize their argument and show the need for a particular outcome (such as a guilty verdict) in a limited amount of time so as to drive home this point to jurors. Readers are like the jurors in this example. They need to be able to walk away from the literature review by understanding what the topic is, all of the relevant literature on the topic, any weaknesses in prior findings/ methodology, and what this study is going to contribute to the further understanding of this topic.

If the above steps are followed, organizing and writing a literature review will become a more natural process with practice. Writing a literature review may never become easy because of the unique challenges that face each topic. However, following the steps, processes, and organization discussed above will help throughout the entire process of ensuring what the focus of current topic may be, and what types of necessary information to include. In addition, knowing how to adequately write a literature review will greatly assist in understanding and synthesizing vast amounts of information in addition to being able to more clearly recognize

arguments being made in readings across all disciplines. Learning how to write a literature review greatly assists in the learning process by being able to recognize the structure of others' writings that may have been less apparent beforehand. The importance of understanding, both as a researcher and as a reader of a research study, what is already known about a topic is primary to doing high quality and useful research. As Boote and Beile (2005, p. 3) explain it: "A substantive, thorough, sophisticated literature review is a precondition for doing substantive, thorough, sophisticated research." Therefore, learning how to write a high quality literature review is an invaluable tool for both the writing process and the learning process.

How to Use This E-Book

Part 1. Principles of MLA Style

You are encouraged to read the first part from start to finish. It explains how and why good writers use sources and introduces the core elements of entries in the works-cited list.

Part 2. Details of MLA Style

The second part is arranged in numbered sections. It offers systematic guidelines on borrowing from and documenting your sources.

Cross-References

Underlining in the text followed by a shaded plus sign (+) indicates a link to more information elsewhere in the book. When relevant, the plus sign is followed by a shaded description of the topic covered there and the section number.

Limitations

Although this e-book evokes the print design of the *MLA Handbook* as much as possible, it also responds to the limitations

of e-reader software and devices. You may not see all the fonts, underlining, and other design features. In particular, Kindle for iOS does not display the underlining denoting cross-references; only the plus sign will appear. If your e-reader software or device offers a “publisher default” option, select it to mitigate some of these limitations.

Foreword

In 1883 a small group of distinguished scholars came together with a radical idea: that modern languages deserved the same respect in higher education as classical languages (Greek and Latin). They decided to form an organization that would advocate language study, research, and the evolution of scholarship. The organization they founded is the Modern Language Association. Today the MLA has over 25,000 members in the United States, in Canada, and around the world.

Since its founding, the organization has been committed to sharing ideas and research. Its notable publications include the *MLA International Bibliography*, a major resource for researchers in literature and language, and *PMLA*, one of the most respected journals of literary studies. But the publication best known to the wider public is surely the *MLA Handbook*, which has served as the “style bible” for generations of students. Like the association, it has evolved in response to changing needs over the years.

I am especially pleased to present the eighth edition of the *MLA Handbook*, because it embodies so many of the values that define the association: a commitment to sharing ideas, a belief in scholarship as the work of a broad community, and a recognition that, while methods and media may change, basic principles of research stay the same. Designed in consultation with students, teachers, and researchers, this edition gives users more freedom to create references to fit their audiences. The recommendations continue to represent the

consensus of teachers and scholars but offer a greater flexibility that will better accommodate new media and new ways of doing research.

We release new editions of the *MLA Handbook* when developments in scholarly research and writing call for changes in MLA style. The eighth edition brings one of our greatest shifts ever and, we believe, will serve the needs of students, teachers, and scholars today and in coming years. As always, we will be happy to hear from readers of this edition so that we can improve future iterations of MLA style.

Rosemary G. Feal
Executive Director
Modern Language Association

Preface

“Has an element of fetishism perhaps crept into what was once a necessary academic practice?” So asks the writer and translator Tim Parks as he expresses his frustration with the process of creating the source documentation to be included in his forthcoming book—not least because he wonders whether the Internet has rendered that information superfluous. I am certain that many writers today experience similar frustration and raise similar doubts when detailing the sources with which they work. Given that this is the preface to the new edition of the authoritative guide to MLA documentation practice, you might expect that I intend to refute Parks’s question. I do take issue with it, but for reasons perhaps different from the ones you might assume. The author is right to note that scholarly documentation has over decades acquired increasingly complex rules and formats, as well as to suggest that some of the information traditionally included in citations may be dispensed with today. He’s not right, however, that documentation was “once” a necessity and is now obsolete thanks to search engines and full-text databases. If anything, the increasing use of such tools and resources by students and scholars makes the inclusion of a reliable data trail for future searchers even more important.

The problem, let me hasten to add, does not arise from the supposed ephemerality of digital tools and databases. Nor does this preface or the following guide assume that paper is secure and that bits, networks, and screens are fragile. The

problem, rather, is the increasing mobility of texts. The sources with which we work are often discovered in locations and formats different from those in which they were originally published, and we have no way of knowing today where those sources might end up tomorrow. Moreover, for all the wonders of Internet search engines, they cannot be counted on to yield the right references every time we issue a query, because the algorithms used by search engines often base the presentation of results on popularity or even sponsorship. If a quotation in a text lacks documentation, an Internet search may be the only way to locate the original source, but the search may yield irrelevant works that contain the same passage. And even if the search locates a copy of the source, readers can't be certain that it's a faithful copy and thus that they'll see the same thing in it that the author who quoted from the original saw. All this is to say that the reasons for documenting sources in academic writing extend beyond simply giving a generic credit to the work from which a quotation or other borrowing was derived. Documentation is the means through which scholarly conversations are recorded, and the specifics of those conversations matter.

This edition of the *MLA Handbook* works to foreground those conversations among authors and between writer and reader. Before we get to the goals and strategies of the volume you hold in your hands (or see on your screen or encounter in some way I haven't yet imagined), it's worth rehearsing the history of documentation practices and, in particular, the development of MLA style.

In 1951 William Riley Parker, then the executive director of the Modern Language Association, published *The MLA Style Sheet*, a thirtyone-page pamphlet that sought

to be a “more or less official” guide to the writing conventions then in use at more than eighty scholarly journals. The call issued by the style sheet for consistency in academic expression was tempered by an acknowledgment that “many problems of style cannot be reduced to rules even if everyone could agree” (3). The release of this document expanded the consensus, however; more journal and book publishers adopted MLA style for their publications, and numerous universities required it for student papers.

In addition to recommendations on the preparation of documents (“In general, TYPE your manuscript to meet the very practical needs of your editor and printer” [4]) and on conventional aspects of writing, including spelling and the use of quotations and numerals, *The MLA Style Sheet* proposed a coherent system for documenting sources. That system relied primarily on footnotes, examples of which were included in the style sheet and supported by a long accompanying list of abbreviations designed to keep the footnotes brief.

A revised and expanded edition of *The MLA Style Sheet* was published in 1970, updating MLA style to reduce the use of roman numerals and to add publishers’ names to bibliographic citations. It maintained a focus on the needs of scholars who intended to publish the results of their research. In 1977 the first edition of the *MLA Handbook* gave its attention to the needs of students. This 163-page guide adopted the expressly pedagogical aim of helping student writers of research papers understand and implement the conventions of academic prose. The second edition of the handbook (221 pages) was released in 1984 and was accompanied the following year by the first edition of the *MLA*

Style Manual, which took established scholars and graduate students as its audience, sharpening the handbook's focus on undergraduate writing.

This history suggests that while there is a temptation to think of MLA style as an unchanging monolith—a singular way of doing things—the style has in fact evolved, and it has at moments undergone radical transformation (such as the shift, in 1984, from footnotes to the list of works cited and corresponding in-text references). Modifications came about in response to developments in literary studies, as well as to the changing needs of students. Over the years, however, the handbook gained what some felt was a forbidding level of detail (the seventh edition was 292 pages long). It gradually became a reference work, which users consulted at need, rather than a guide that taught the principles underlying documentation.

In publishing the eighth edition of the *MLA Handbook*, we aim to better meet the needs of students today by offering a quick but thorough introduction to the hows and whys of using sources in academic writing. We hope that this reorientation will convey what we believe to be the most important aspect of academic writing: its engagement with the reader, which obligates the author to ensure that the reader has all the information necessary to understand the text at hand without being distracted from it by the citations.

In a citation-by-citation comparison, this new version of MLA style may appear to differ only slightly from established practice, but the approach we take in this volume foregrounds principles. While the seventh edition of the *MLA Handbook* described the style it presented as “flexible” and “modular,” providing “several sequences of elements that

can be combined to form entries” (129), the style was nonetheless based on defining a citation format for each kind of source. Thus, until now the handbook presented separate rules for citing a book, a journal article, a newspaper article, a personal letter, and all the rest in the ever-expanding range of sources that writers use in their work. As a result, with the emergence of each new media platform would come a new query: How do you cite a *YouTube* video? a blogpost? a tweet?

With the eighth edition, we shift our focus from a prescriptive list of formats to the overarching purpose of source documentation: enabling readers to participate fully in the conversations between writers and their sources. Such participation requires the presentation of reliable information in a clear, consistent structure, but we believe that if we concentrate on the principles undergirding MLA style and on the ways they can be applied in a broad range of cases, we can craft a truly flexible documentation practice that will continue to serve writers well in a changing environment. Moreover, this edition recognizes that different kinds of scholarly conversations require different kinds of documentation and thus that the application of principles might vary according to context. It therefore focuses on the writer’s decision making. It offers a new approach to thinking about MLA style, one centered not on a source’s publication format but rather on the elements common to most sources and on the means of flexibly combining those elements to create appropriate documentation for any source.

Change is perhaps the one constant of contemporary academic life. The first edition of the *MLA Style Manual* noted “numerous innovations affecting scholarly publication,”

including “the widespread use of word processors” (Achtert and Gibaldi vii), and change has only accelerated in recent years, making flexibility and openness increasingly important. In the eighth edition, we therefore embrace the fact that student research and writing today take many forms other than the research paper, and so we begin what we expect to be an ongoing exploration of the best means of documenting sources in new modes of academic writing. Just as research sources have become mobile, so too have the works that a researcher creates: they appear in print but are also projected on screens and displayed on reading devices. The citations a researcher today produces are appended to traditional, linear texts, but they are also attached to weblike texts and even to projects that aren’t texts at all. If this edition of the *MLA Handbook* lets go of some of what Parks called an “element of fetishism” in scholarly documentation practices, it nonetheless argues that documentation remains a core academic principle, one that can be adapted to new circumstances.

Developing this edition and the new understanding of MLA style that it conveys required the energy and attention of many scholars, instructors, editors, and librarians. The edition builds on the work done before me, including the important contributions of William Riley Parker, Walter S. Achtert, Joseph Gibaldi, and David G. Nicholls. Though I was primarily responsible for writing the text that follows, I could not have managed it without the efforts and wisdom of the MLA staff members who work most closely with MLA style day in and day out: Angela Gibson, Judy Goulding, James Hatch, Margit Longbrake, Sara Pastel, and Eric Wirth, who together rethought the principles of MLA style for the twenty-first century. We

consulted along the way with a wide range of MLA members, including members of the Committee on Information Technology, the Publications Committee, and the Executive Council. Many experts read early drafts of the manuscript; among this group we particularly thank Andi Adkins-Pogue, Carolyn Ayers, Rebecca Babcock, Delores Carlito, Brooke Carlson, Kelly Diamond, Keri Donovan, Michael Elam, Lindsay Hansen, Nicki Lerczak, Sara Marcus, Debra Ryals, Thomas Smith, Jeanne Swedo, Araceli Tinajero, and Belinda Wheeler.

Transforming the manuscript into a finished publication was also the work of many hands. The design, typesetting, electronic processing, and printing were handled by David F. Cope, Tom Lewek, Pamela Roller, Laurie Russell, and Patrice Sheridan, under the supervision of Judith Altreuter.

This edition of the *MLA Handbook* is accompanied by online resources (see style.mla.org). We hope that you will explore these resources and let us know what else you would find useful.

Finally, thanks are due to Rosemary G. Feal, the executive director of the MLA, and to the members of the MLA Executive Council for their vision and leadership in shaping the future of scholarly communication in the humanities.

PART 1

Principles of MLA
Style

INTRODUCTION

In today's world, forms of communication proliferate, and publications migrate readily from one medium to another. An article published in a print journal may be discovered and read online, through one of many databases; an episode of a television series may be watched through a service like *Hulu*; a blogpost may be republished as a book chapter. Even as we developed this edition of the *MLA Handbook*, new publication formats and platforms emerged.

As a result, now more than ever we need a system for documenting sources that begins with a few principles rather than a long list of rules. Rules remain important, and we will get to them in due course, but in this section we emphasize commonsense guidelines aimed at helping writers at various levels conduct research and provide their audiences with useful information about their sources.

Your use of MLA style should be guided by these principles:

Cite simple traits shared by most works.

In previous editions of the *MLA Handbook*, an entry in the works-cited list was based on the source's publication format (e.g., book, film, magazine article, Web publication). The writer first determined the format of the source and then collected the publication facts associated with the format. A consequence of that approach was that works in a new medium could not be documented until the MLA created instructions for it. This edition, by contrast, is not centered on publication formats. It deals instead with facts

common to most works—author, title, and so on. The writer examines the source and records its visible features, attending to the work itself and a set of universal guidelines. A work in a new medium thus can be documented without new instructions.

Remember that there is often more than one correct way to document a source.

Different situations call for different solutions. A writer whose primary purpose is to give credit for borrowed material may need to provide less information than a writer who is examining the distinguishing features of particular editions (or even specific copies) of source texts. Similarly, scholars working in specialized fields may need to cite details about their sources that other scholars making more general use of the same resources do not.

Make your documentation useful to readers.

Good writers understand why they create citations. The reasons include demonstrating the thoroughness of the writer's research, giving credit to original sources, and ensuring that readers can find the sources consulted in order to draw their own conclusions about the writer's argument. Writers achieve the goals of documentation by providing sufficient information in a comprehensible, consistent structure.

This edition of the *MLA Handbook* is designed to help writers *think* about the sources they are documenting, *select* the information about the sources that is appropriate to the project

they are creating, and *organize* it logically and without complication. Armed with a few rules and an understanding of the basic principles, a writer can generate useful documentation of any work, in any publication format.

WHY DOCUMENT SOURCES?

Documenting sources is an aspect of writing common to all academic fields. Across the natural sciences, the social sciences, and the humanities, authors use standard techniques to refer to the works that influenced or otherwise contributed to their research. Why?

Academic writing is at its root a conversation among scholars about a topic or question. Scholars write for their peers, communicating the results of their research through books, journal articles, and other forms of published work. In the course of a project, they seek out relevant publications, to learn from and build on earlier research. Through their own published work, they incorporate, modify, respond to, and refute previous publications.

Given the importance of this conversation to research, authors must have comprehensible, verifiable means of referring to one another's work. Such references enable them to give credit to the precursors whose ideas they borrow, build on, or contradict and allow future researchers interested in the history of the conversation to trace it back to its beginning. The references are formatted in a standard way so that they can be quickly understood and used by all, like a common language.

Students are called on to learn documentation styles in a range of courses throughout their education, but not because it is expected that all students will take up such research practices in their professional lives. Rather, learning the conventions of a form of writing—those of the research essay, for instance—prepares the student to write not just in that form but in other ones as well.

Learning a documentation style, in other words, prepares a writer to be on the lookout for the conventions to which every professional field expects its members to adhere in their writing. Legal documents must refer to prior legal documents in a standard way to be acceptable in the legal profession. Reports on scientific research must refer to earlier research in the fashion expected in a particular scientific field. Business documents point to published information and use a language and format that are accepted in business. Journalists similarly obey conventions for identifying their sources, structuring their stories, and so on. The conventions differ from one profession to another, but their purpose is the same.

Learning good documentation practices is also a key component of academic integrity. However, avoiding charges of plagiarism is not the only reason that a student should learn to document sources. The proper use of a field's preferred documentation style is a sign of competence in a writer. Among other benefits, it shows that the writer knows the importance of giving credit where credit is due. It therefore helps the writer become part of a community of scholars and assures readers that the writer's work can be trusted.

PLAGIARISM AND ACADEMIC DISHONESTY

You may have heard or read about cases in which a politician, a journalist, or another public figure was accused of plagiarism. No doubt you have also had classroom conversations about plagiarism and academic dishonesty. Your school may have an honor code that addresses academic dishonesty; it almost certainly has disciplinary procedures meant to address cases of plagiarism. But you may nonetheless find yourself with questions: What is plagiarism? What makes it a serious offense? What does it look like? And how can scrupulous research and documentation practices help you avoid it?

What Is Plagiarism?

Merriam-Webster's Collegiate Dictionary defines plagiarizing as committing “literary theft.” Plagiarism is presenting another person’s ideas, information, expressions, or entire work as one’s own. It is thus a kind of fraud: deceiving others to gain something of value. While plagiarism only sometimes has legal repercussions (e.g., when it involves copyright infringement—violating an author’s exclusive legal right to publication), it is always a serious moral and ethical offense.

What Makes Plagiarism a Serious Offense?

Plagiarists are seen not only as dishonest but also as incompetent, incapable of doing research and expressing original thoughts. When professional writers are exposed as plagiarists, they are likely to lose their jobs and are certain to suffer public embarrassment, diminished prestige, and loss of

future credibility. The same is true of other professionals who write in connection with their jobs, even when they are not writing for publication. The charge of plagiarism is serious because it calls into question everything about the writer's work: if *this* piece of writing is misrepresented as being original, how can a reader trust any work by the writer? One instance of plagiarism can cast a shadow across an entire career.

Schools consider plagiarism a grave matter for the same reason. If a student fails to give credit for the work of others in one project, how can a teacher trust any of the student's work? Plagiarism undermines the relationship between teachers and students, turning teachers into detectives instead of mentors, fostering suspicion instead of trust, and making it difficult for learning to take place. Students who plagiarize deprive themselves of the knowledge they would have gained if they had done their own writing. Plagiarism also can undermine public trust in educational institutions, if students are routinely allowed to pass courses and receive diplomas without doing the required work.

What Does Plagiarism Look Like?

Plagiarism can take a number of forms, including buying papers from a service on the Internet, reusing work done by another student, and copying text from published sources without giving credit to those who produced the sources. All forms of plagiarism have in common the misrepresentation of work not done by the writer as the writer's own. (And, yes, that includes work you pay for: while celebrities may put their names on work by ghostwriters, students may not.)

Even borrowing just a few words from an author without clearly indicating that you did so constitutes plagiarism. Moreover, you can plagiarize unintentionally; in hastily taken notes, it is easy to mistake a phrase copied from a source as your original thought and then to use it without crediting the source.

(Is it possible to plagiarize yourself? Yes, it is. If you reuse ideas or phrases that you used in prior work and do not cite the prior work, you have plagiarized. Many academic honesty policies prohibit the reuse of one's prior work, even with a citation. If you want to reuse your work, consult with your instructor.)

Imagine, for example, that you read the following passage in the course of your research (from Michael Agar's book *Language Shock*):

Everyone uses the word *language* and everybody these days talks about *culture*. . . .
“Languaculture” is a reminder, I hope, of the *necessary* connection between its two parts. . . .

If you wrote the following sentence, it would constitute plagiarism:

At the intersection of language and culture lies a concept that we might call “languaculture.”

This sentence borrows a word from Agar's work without giving credit for it. Placing the term in quotation marks is insufficient. If you use the term, you must give credit to its source:

At the intersection of language and culture lies a concept that Michael Agar has called “languaculture” (60).

In this version, a reference to the original author and a parenthetical citation indicate the source of the term; a corresponding entry in your list of works cited will give your reader full information about the source.

It's important to note that you need not copy an author's words to be guilty of plagiarism; if you paraphrase someone's ideas or arguments without giving credit for their origin, you have committed plagiarism. Imagine that you read the following passage (from Walter A. McDougall's *Promised Land, Crusader State: The American Encounter with the World since 1776*):

American Exceptionalism as our founders conceived it was defined by what America *was*, at home. Foreign policy existed to defend, not define, what America *was*.

If you write the following sentence, you have plagiarized, even though you changed some of the wording:

For the founding fathers America's exceptionalism was based on the country's domestic identity, which foreign policy did not shape but merely guarded.

In this sentence, you have borrowed an author's ideas without acknowledgment. You may use the ideas, however, if you properly give credit to your source:

As Walter A. McDougall argues, for the founding fathers America's exceptionalism was based on the country's domestic identity, which foreign policy did not shape but merely guarded (37).

In this revised sentence, which includes an in-text citation and clearly gives credit to McDougall as the source of the idea, there is no plagiarism.

How Can You Avoid Plagiarism?

Avoiding plagiarism begins with being scrupulous in your research and note-taking. Keep a complete and thorough list of all the sources that you discover during your research and wish to use, linking each source to the information you glean from it, so that you can double-check that your work acknowledges it. Take care in your notes to distinguish between what is not yours and what is yours, identifying ideas and phrases copied from sources you consult, summaries of your sources, and your own original ideas. As you write, carefully identify all borrowed material, including quoted words and phrases, paraphrased ideas, summarized arguments, and facts and other information.

Most important is that you check with your instructor if you are unsure about the way that you are using a particular source.

Does Absence of Documentation Indicate Plagiarism?

Documentation is not required for every type of borrowed material. Information and ideas that are common knowledge among your readers need not be documented. Common knowledge includes information widely available in reference works, such as basic biographical facts about prominent persons and the dates and circumstances of major historical events. When the facts are in dispute, however, or when your readers may want more information about your topic, it is good practice to document the material you borrow.

The rest of this section will guide you through the steps involved in giving credit for others' work. Documentation begins

well before you put together your list of works cited. Sound
academic use of sources starts with evaluating them and
selecting the appropriate information from them.

THINK: EVALUATING YOUR SOURCES

In writing a research paper, putting together a presentation, creating an online project, or doing other kinds of academic work, you will gather sources that inform, support, or otherwise help you shape your argument. The gathering of sources used to be more arduous than it is today: researchers had to spend hours in the library, tracking down printed indexes and bibliographies, locating the works uncovered, and then obtaining physical copies of the works. One part of this process used to be easier, however: a researcher could assume that the works found were reliable, since they were discovered through professionally compiled indexes and in professionally curated collections.

Today the Internet, with its many publications, databases, archives, and search engines, has accelerated the process of finding and retrieving sources—but at the same time it has complicated the researcher's assessment of their reliability. The amount and variety of information available have grown exponentially, but the origins of that information are too often unclear.

The first step, therefore, in gathering sources for your academic work is to evaluate them, asking yourself questions such as these:

Who is the author of the source? Is the author qualified to address the subject? Does the author draw on appropriate research and make a logical argument? Do you perceive bias or the possibility of it in the author's relation to the subject matter?

What is the source? Does it have a title, and does that title tell you anything about it? If it lacks a title, how would you describe it? Is it a primary source, such as an original document, creative work, or artifact, or a secondary source, which reports on or analyzes primary sources? If it is an edition, is it authoritative? Does the source document its own sources in a trustworthy manner?

How was the source produced? Does it have a recognized publisher or sponsoring organization? Was it subjected to a process of vetting, such as peer review, through which authorities in the field assessed its quality?

Where did you find the source? Was it cited in an authoritative work? Was it among the results of

a search you conducted through a scholarly database (such as the *MLA International Bibliography*) or a library's resources? Did you discover it through a commercial search engine that may weight results by popularity or even payment?

When was the source published? Could its information have been supplemented or replaced by more recent work?

These are only a few of the questions that you might consider as you evaluate the sources you use in your work. Both your judgment and your awareness of your readers' expectations are crucial at this stage.

(*Google* and *Wikipedia* are reasonable places to begin your research but not good places to end it. Follow up on the sources that *Wikipedia* entries cite. Be sure to read the

pages accompanying a *Wikipedia* entry, which give its history and the editors' discussions about it, since that information shows how the entry evolved and where the controversy in your subject lies.)

It is important to understand that research is a cyclic process. Scholars rarely find all the sources they need in a single search. You should expect to search, evaluate the sources you find, refocus or otherwise revise your searching strategy, and begin again.

As you do your research, keep complete, well-organized records that allow you to retrace your footsteps, since you may need to return to a source for more information. Keeping good notes will also simplify the task of documenting your sources. Digital reference managers can be helpful to this end, but they have limitations. They may overlook key information, capture the wrong information, or generate citations with improper formatting. You should understand how to create your own documentation even if you use a citation generator, so that you can correct the output and can produce it yourself if the citation generator is not available.

After gathering sources, evaluating them, and winnowing out those unsuitable for your research, you will record information about the ones you plan to consult. This information is the basis of your documentation.

SELECT: GATHERING INFORMATION ABOUT YOUR SOURCES

The source documentation in your finished project will be built from information you collect as you discover and read useful works. As you evaluated your sources, you asked yourself the following questions:

Who is the author of the source?

What is the title of the source?

How was the source published?

Where did you find the source?

When was the source published?

Each of these elements—author, title, publisher, location, publication date—has a place in your documentation, so keep track of them carefully. Be sure that you select the correct information about your sources. Examine the work itself for the facts about its publication.

+ Facts missing from source. [2.6.1](#) Do not rely on a listing found elsewhere, whether on the Web, in a library catalog, or in a reference book, because it may be erroneous or incomplete.

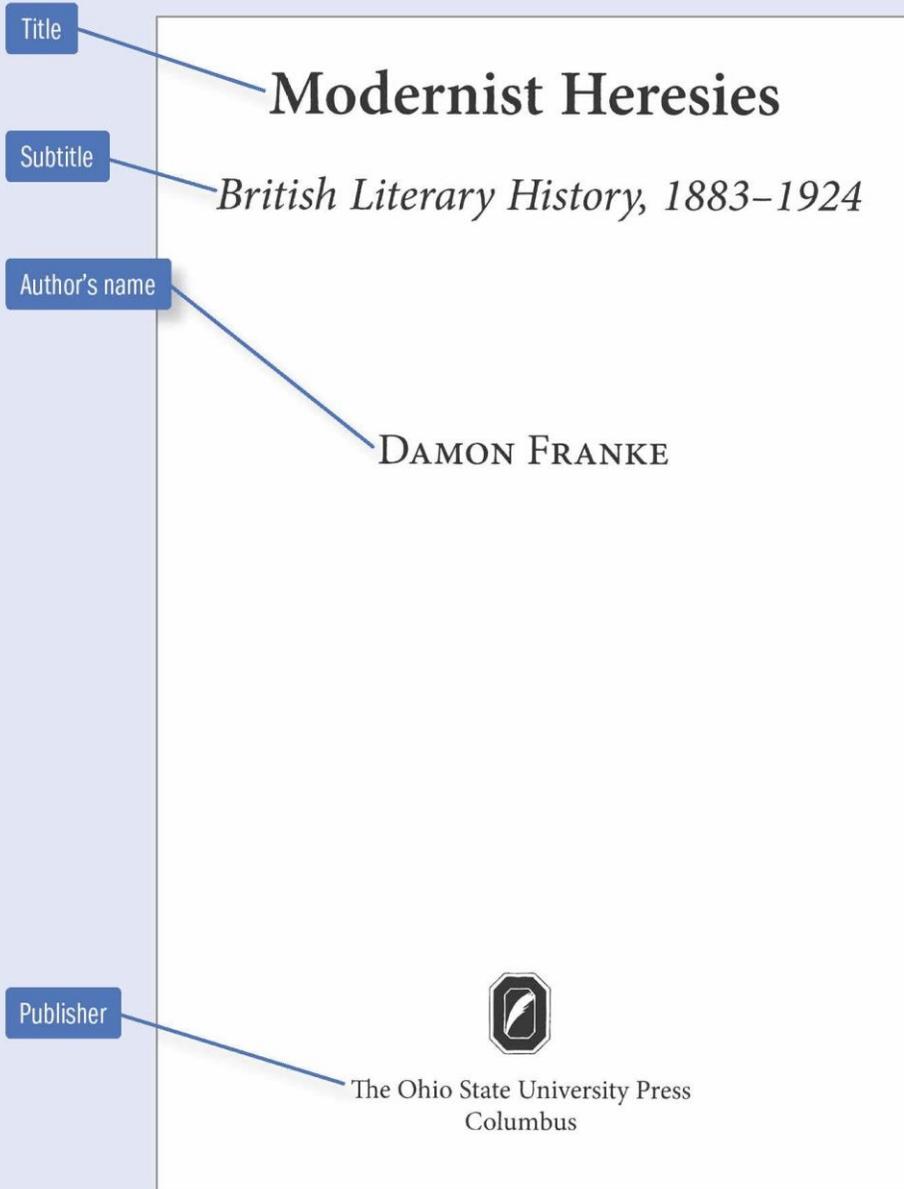

In general, you should look in the places where the source's publisher, editor, or author gives credit for or describes its production. The examples on [pages 14–18](#) show where you can find publication facts about works in various media. We'll go into more detail about what information you need and what you do with it as we discuss organizing your documentation.

Geraldine Lawless

Unknown Futures: Nineteenth-Century Science Fiction in Spain

Title of article

In her *SFS* review of Stelio Cro's edition of the previously unpublished early Spanish utopia called *Sinapia*, Sylvia Winter expressed her excitement at the quality of the work, saying "*Sinapia* may well constitute, up to this point, the only literary utopia written from the perspective of what has been described as the semi-peripheral areas of the modern world system" (100). With the qualification "up to this point," Winter avoids generalizations about the non-existence of literary utopias in certain parts of the globe. Such careful wording does not always characterize literary histories. Her cautious approach raises an important question about the literary histories of Spain and about the history of

Work on the

Web sources may require you to look in more than one place for the information. The Web page on which you found the work will have some facts. Along with other information there, copy the URL of the page into your notes. If the page lacks needed information, such as the name of the site's publisher, look for a link to the publisher's website or a similar site.

Some Web sites specify works-cited-list entries for their contents. Such examples provide you with useful information about the site but will not necessarily conform to the system in this handbook, even if they are labeled "MLA

The Beauty of the Injured Book

Posted on May 2, 2014

Publication date

By Erik Kwakkel (@erik_kwakkel)

Author's name

... eyes are naturally drawn to pages filled with color and gold, those without ... can be equally appealing. Indeed, even damaged goods – mutilated bindings, torn pages, parchment with cuts and holes – can be highly attractive, as I hope to show in this post. The visual power of damage may be generated by close-up photography, with camera and book at just the right angle, catching just the right amount of light. The following images celebrate the beauty of the injured book, the art of devastation.

Work in Film, Video, or

A work in a medium like film, video, or television usually contains credits needed for documentation.

If credits are lacking in the work and you viewed it on a DVD, the missing information on the disc's packaging.

This image shows the opening credits of the 1937 film 'A Star Is Born', continuing from the previous image. The background and font style are consistent. The text lists the screen play authors (Dorothy Alan Parker and Robert Carson), the story authors (William A. Wellman and Robert Carson), and the distributor (United Artists). The top navigation bar and the bottom social media sharing bar are identical to the first image.

ORGANIZE: CREATING YOUR DOCUMENTATION

Once you've evaluated the sources you used in your research and gathered the relevant information about them, it's time to organize the information into entries in the works-cited list and create in-text citations. The purpose of any documentation style is to allow authors to guide their readers quickly and unobtrusively to the source of a quotation, a paraphrased idea, a piece of information, or another kind of borrowed material used in the development of an argument or idea. A citation should provide a roadmap leading to the original source while interrupting the reader's engagement with the text as little as possible.

Minimizing interruptions is a goal in many kinds of writing. If readers are to be engaged and involved in an idea or issue, the reading process should be smooth and unimpeded. Every time readers have to stop and figure something out—whether it's deciphering the intent of stray punctuation, puzzling over a misspelled or misused word, stumbling over an incorrectly structured citation, or wondering about a reference to a source not in the works-cited list—they are distracted from the argument at hand, and their distraction hinders engagement with the author's point. If a piece of writing is as clear and error-free as possible and if its documentation is trustworthy, readers will remain focused on the ideas.

To satisfy the two requirements of completeness and brevity, documentation in MLA style has two parts. The first part is a detailed entry in a list of works cited; the second is a citation in the text, a minimal reference that directs the reader to the entry. We'll discuss each of these in turn.

The List of Works Cited

The list titled “Works Cited” identifies the sources you borrow from—and therefore cite—in the body of your research project. Works that you consult during your research but do not borrow from are not included (if you want to document them as well and your instructor approves their inclusion, give the list a broader title, such as “Works Consulted”). Each entry in the list of works cited is made up of core elements given in a specific order, and there are optional elements that may be included when the situation warrants.

THE CORE ELEMENTS

The core elements of any entry in the works-cited list are given below in the order in which they should appear. An element should be omitted from the entry if it’s not relevant to the work being documented. Each element is followed by the punctuation mark shown unless it is the final element, which should end with a period.

- 1 Author.
- 2 Title of source.
- 3 Title of container,
- 4 Other contributors,
- 5 Version,
- 6 Number,
- 7 Publisher,
- 8 Publication date,
- 9 Location.

In what follows, we'll explain each of these elements, how you'll find them, and how they might differ from one medium to another.

1 Author.

[+ More about authors' names: 2.1](#)

The author's name is usually prominently displayed in a work, often near the title (see [fig. 1](#)). Begin the entry with the author's last name, [+ Multiple works by one author: 2.7.2](#) followed by a comma and the rest of the name, as presented in the work. End this element with a period (unless a period that is part of the author's name already appears at the end).

Baron, Naomi S. "Redefining Reading: The Impact of Digital Communication Media." *PMLA*, vol. 128, no. 1, Jan. 2013, pp. 193-200.

Jacobs, Alan. *The Pleasures of Reading in an Age of Distraction*. Oxford UP, 2011.

Kincaid, Jamaica. "In History." *Callaloo*, vol. 24, no. 2, Spring 2001, pp. 620-26.

When a source has **two authors**, include them in the order in which they are presented in the work (see [fig. 2](#)). Reverse the first of **the names as just described**, [Multiple works by coauthors: 2.7.3](#) follow it with a comma and *and*, and give the second name in normal order.

Dorris, Michael, and Louise Erdrich. *The Crown of Columbus*. HarperCollins Publishers, 1999.

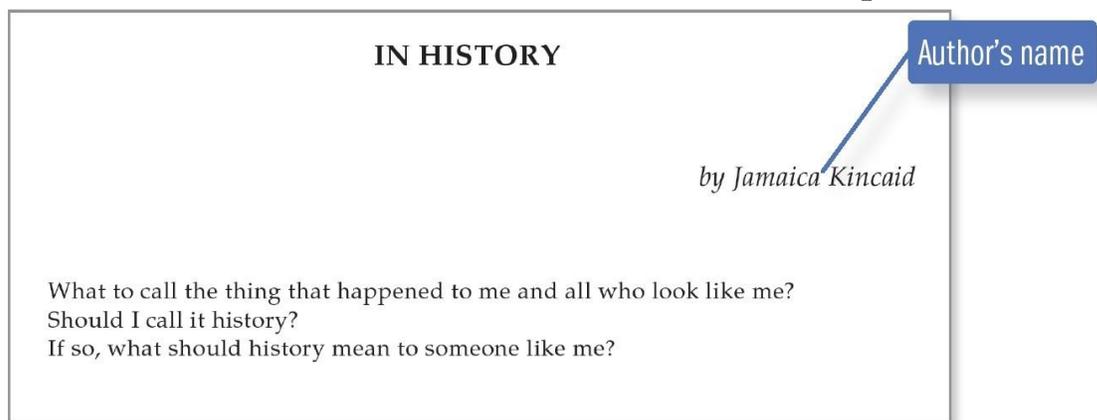

Fig. 1. The top of the first page of an article in a scholarly journal.

Give the author's name as found in the work. Reverse the name for alphabetizing: "Kincaid, Jamaica."

When a source has **three or more authors**, reverse the first of the names as just described and follow it with a comma and *et al.* ("and others").

Burdick, Anne, et al. *Digital Humanities*. MIT P, 2012.

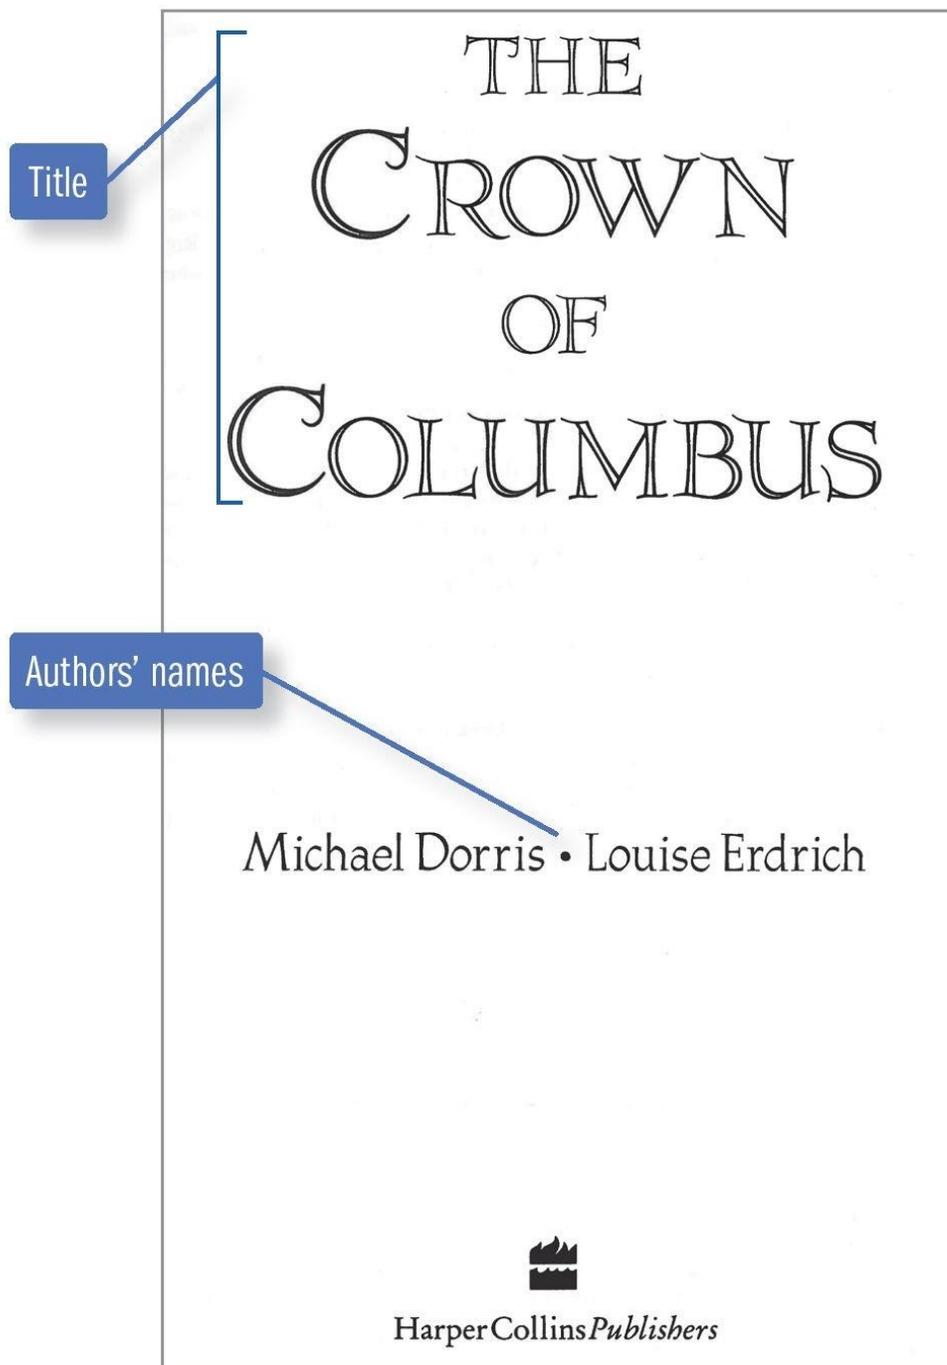

Fig. 2. The title page of a book. Two authors are shown.

Reverse only the first author's name for alphabetizing:
"Dorris, Michael, and Louise Erdrich."

We use the term *author* loosely here: it refers to the person or group primarily responsible for producing the work or the aspect of the work that you focused on. If the role of that person or group was something other than creating the work's main content, follow the name with a label that

describes the role. For example, if the source is an edited volume of essays that you need to document as a whole, the “author” for your purposes is the person who assembled the volume—its **editor**. Since the editor did not create the main content, the name is followed by a descriptive label.

Nunberg, Geoffrey, editor. *The Future of the Book*. U of California P, 1996.

A source with **two or more editors** requires combining the two methods just described (and making the descriptive label plural).

Baron, Sabrina Alcorn, et al., editors. *Agent of Change: Print Culture Studies after Elizabeth L.*

Eisenstein. U of Massachusetts P / Center for the Book, Library of Congress, 2007.

Holland, Merlin, and Rupert Hart-Davis, editors. *The Complete Letters of Oscar Wilde*. Henry Holt, 2000.

When you discuss a source that was **translated from another language** and your focus is on the translation, treat the translator as the author.

Pevear, Richard, and Larissa Volokhonsky, translators. *Crime and Punishment*. By Feodor Dostoevsky, Vintage eBooks, 1993.

Sullivan, Alan, and Timothy Murphy, translators. *Beowulf*. Edited by Sarah Anderson, Pearson, 2004.

If the name of the creator of the work’s main content does not appear at the start of the entry (as in the example for *Crime and Punishment*, above), give that name, preceded by *By*, in the position of other contributors. ±

Works in media such as **film and television** are usually produced by many people playing various roles. If your discussion of such a work focuses on the contribution of a particular person—say, the performance of an actor or the ideas of the screenwriter—begin the entry with his or her name, followed by a descriptive label.

Gellar, Sarah Michelle, performer. *Buffy the Vampire Slayer*. Mutant Enemy, 1997-2003.

Whedon, Joss, creator. *Buffy the Vampire Slayer*. Mutant Enemy, 1997-2003.

If you are writing about a film or television series without focusing on an individual's contribution, begin with the title. You can include information about the director and other key participants in the position of other contributors.

Buffy the Vampire Slayer. Created by Joss Whedon, performance by Sarah Michelle Gellar, Mutant Enemy, 1997-2003.

Pseudonyms, [+ 2.1.1](#) including online usernames, are mostly given like regular author names.

[@persiankiwi](#). "We have report of large street battles in east & west of Tehran now - #Iraelection." *Twitter*, 23 June 2009, 11:15 a.m., twitter.com/persiankiwi/status/2298106072.

Stendhal. *The Red and the Black*. Translated by Roger Gard, Penguin Books, 2002.

Tribble, Ivan. "Bloggers Need Not Apply." *The Chronicle of Higher Education*, 8 July 2005, chronicle.com/article/Bloggers-Need-Not-Apply/45022.

When a work is published **without an author's name**, do not list the author as "Anonymous." Instead, skip the author element and begin the entry with the work's title.

Beowulf. Translated by Alan Sullivan and Timothy Murphy, edited by Sarah Anderson, Pearson, 2004.

Authors do not have to be individual persons. A work may be created by a **corporate author** [2.1.3](#)—an institution, an association, a government agency, or another kind of organization.

United Nations. *Consequences of Rapid Population Growth in Developing Countries*. Taylor and Francis, 1991.

When a work is published by an organization that is also its author, begin the entry with the title, skipping the author element, and list the organization only as publisher.

Reading at Risk: A Survey of Literary Reading in America. National Endowment for the Arts, June 2004.

2 Title of source.

+ [More about titles: 1.2](#) [2.2](#)

After the author, the next element included in the entry in the works-cited list is the title of the source. The title is usually prominently displayed in the work, often near the author (see [fig. 3](#)).

Puig, Manuel. *Kiss of the Spider Woman*. Translated by Thomas Colchie, Vintage Books, 1991.

A subtitle is included after the main title (see [fig. 4](#)).

Joyce, Michael. *Othermindedness: The Emergence of Network Culture.* U of Michigan P, 2000.

Titles are given in the entry in full exactly as they are found in the source, except that capitalization and the punctuation between the main title and a subtitle [1.2.1](#) are standardized.

The appropriate formatting of titles [+](#) [1.2.2](#) helps your reader understand the nature of your sources on sight. A title is placed in quotation marks if the source is part of a larger work. A title is italicized (or underlined if italics are unavailable or undesirable) if the source is self-contained and independent. For example, a **book** is a whole unto itself, and so its title is set in italics.

Jacobs, Alan. *The Pleasures of Reading in an Age of Distraction.* Oxford UP, 2011.

The same is true of a volume that is a **collection of essays, stories, or poems** by various authors.

Baron, Sabrina Alcorn, et al., editors. *Agent of Change: Print Culture Studies after Elizabeth L. Eisenstein.* U of Massachusetts P / Center for the Book, Library of Congress, 2007.

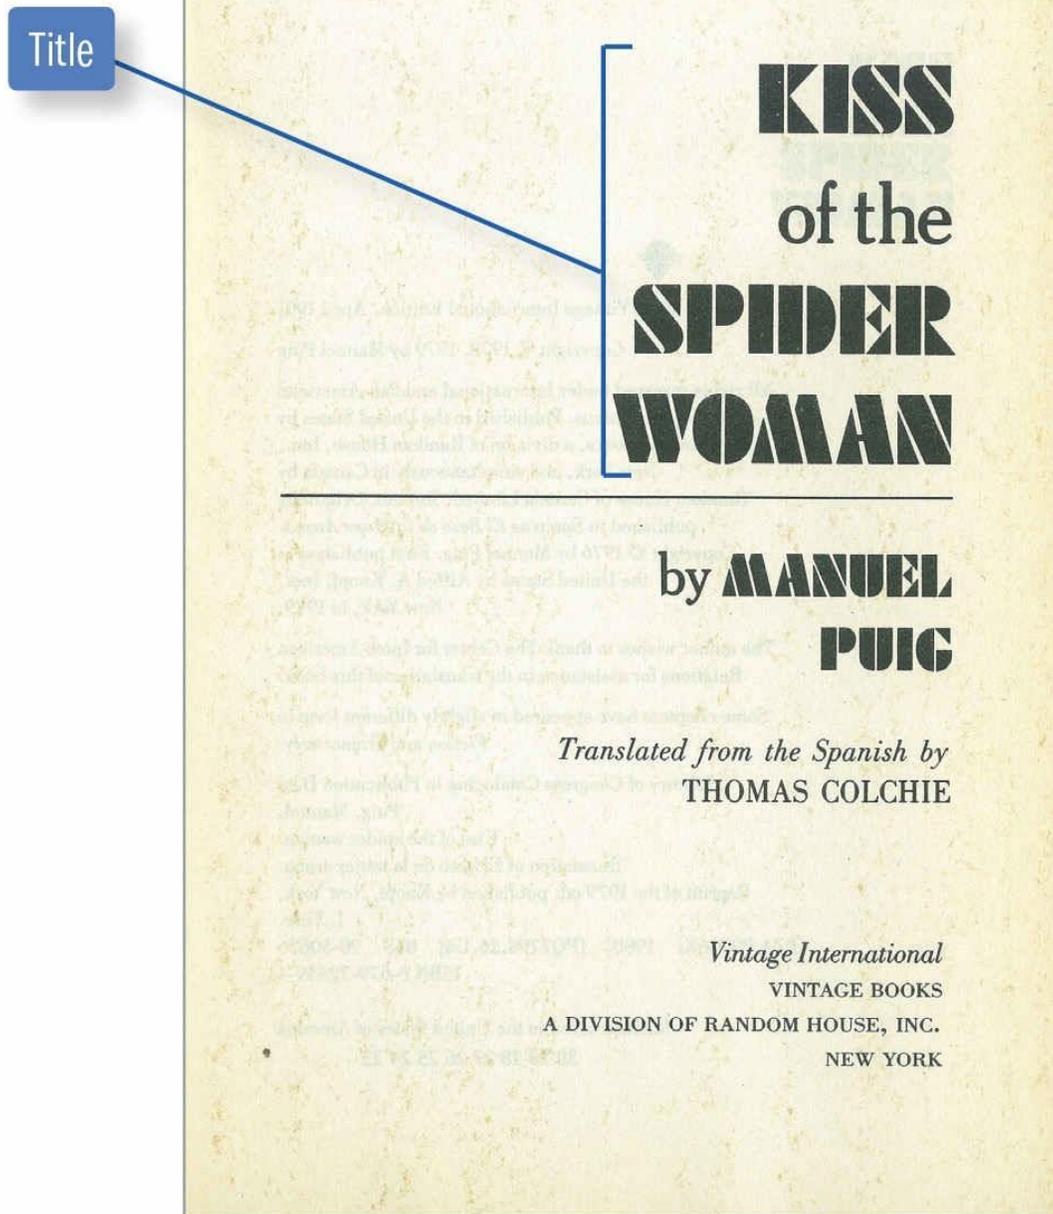

Fig. 3. The title page of a book. (Standardize the capitalization when you copy a title in your text or works-cited list: *Kiss of the Spider Woman*.)

The title of **an essay, a story, or a poem** in a collection, as a part of a larger whole, is placed in quotation marks.

Dewar, James A., and Peng Hwa Ang. "The Cultural Consequences of Printing and the Internet." *Agent of Change: Print Culture Studies after Elizabeth L. Eisenstein*, edited by Sabrina Alcorn

Baron et al., U of Massachusetts P / Center for
the Book, Library of Congress, 2007, pp. 365-77.

When a work that is normally independent (such as a novel or play) appears in a collection (*Ten Plays*, below), the work's title remains in italics.

Euripides. *The Trojan Women*. *Ten Plays*, translated by Paul Roche, New American Library, 1998, pp. 457-512.

When you copy a title and subtitle in your text or works-cited list, add a colon between them:

Othermindedness: The Emergence of Network Culture.

The title of a **periodical** (journal, magazine, newspaper) is set in italics, and the title of an **article** in the periodical goes in quotation marks.

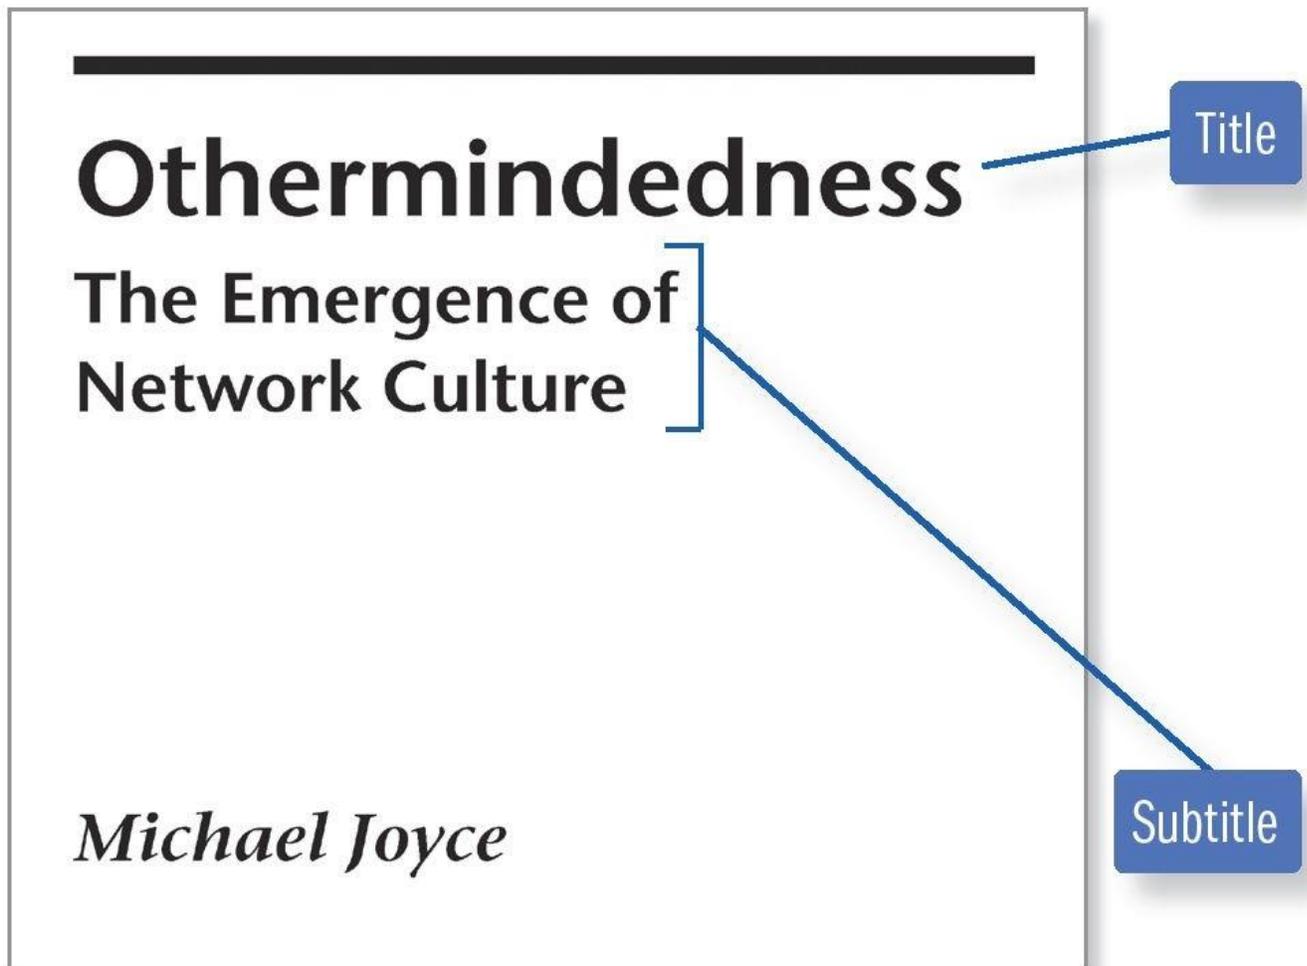

Fig. 4. Part of the title page of a book. The type design makes clear the distinction between the title and subtitle. (When you copy a title and subtitle in your text or works-cited list, add a colon between them: *Othermindedness: The Emergence of Network Culture*.)

Goldman, Anne. "Questions of Transport: Reading Primo Levi Reading Dante." *The Georgia Review*, vol. 64, no. 1, 2010, pp. 69-88.

The rule applies across media forms. The title of a **television series?** Italics.

Buffy the Vampire Slayer. Created by Joss Whedon, performance by Sarah Michelle Gellar, Mutant Enemy, 1997-2003.

The title of an **episode** of a television series? Quotation marks.

“Hush.” *Buffy the Vampire Slayer*, created by Joss Whedon, performance by Sarah Michelle Gellar, season 4, episode 10, Mutant Enemy, 1999.

A **Web site?** Italics.

Hollmichel, Stefanie. *So Many Books*. 2003-13, somanycbooksblog.com.

A **posting or an article** at a Web site? Quotation marks.

Hollmichel, Stefanie. “The Reading Brain: Differences between Digital and Print.” *So Many Books*, 25 Apr. 2013, somanycbooksblog.com/2013/04/25/the-reading-brain-differencesbetween-digital-and-print/.

A **song or other piece of music** on an album? Quotation marks.

Beyoncé. “Pretty Hurts.” *Beyoncé*, Parkwood Entertainment, 2013, www.beyonce.com/album/beyonce/?media_view=songs.

Popular music follows the general rule: the title of a song is placed in quotation marks, and the title of an album is italicized. This remains true even when a track from an album is distributed by itself. If a piece of music released on its own is not originally part of a larger work, however, its title is italicized, regardless of how long the piece is.

When a **source is untitled**, provide a generic description of it, neither italicized nor enclosed in quotation marks, in place of a title. Capitalize the first word of the description and any proper nouns in it.

Mackintosh, Charles Rennie. *Chair of stained oak*. 1897-1900, Victoria and Albert Museum, London.

The description may include the title of another work to which the one being documented is connected. Examples include the description of an untitled comment in an online forum (which incorporates the title of the article commented on) and the description of an untitled review (which incorporates the title of the work under review).

Jeane. Comment on “The Reading Brain: Differences between Digital and Print.” *So Many Books*, 25 Apr. 2013, 10:30 p.m., somanycbooksblog.com/2013/04/25/the-reading-brain-differences-between-digital-and-print/#comment-83030.

Mackin, Joseph. Review of *The Pleasures of Reading in an Age of Distraction*, by Alan Jacobs. *New York Journal of Books*, 2 June 2011, www.nyjournalofbooks.com/bookreview/pleasures-reading-age-distraction.

Identify a short untitled message, such as a tweet, by reproducing its full text, without changes, in place of a title. Enclose the text in quotation marks.

@persiankiwi. “We have report of large street battles in east & west of Tehran now - #Iraelection.” *Twitter*, 23 June 2009, 11:15 a.m., twitter.com/persiankiwi/status/2298106072.

When you document an e-mail message, use its subject as the title. The subject is enclosed in quotation marks and its capitalization standardized.

+ [1.2.1](#)

Boyle, Anthony T. “Re: Utopia.” Received by Daniel J. Cahill, 21 June 1997.

3 Title of container,

When the source being documented forms a part of a larger whole, the larger whole can be thought of as a container that holds the source. The container is crucial to the identification of the source. The title of the container is normally italicized and is followed by a comma, since the information that comes next describes the container.

The container may be a **book** **that is a collection** of essays, stories, poems, or other kinds of works.

Bazin, Patrick. "Toward Metareading." *The Future of the Book*, edited by Geoffrey Nunberg, U of California P, 1996, pp. 153-68.

It may be a **periodical** (journal, magazine, newspaper),

+ Adding city to title of local newspaper: 2.6.1 which holds articles, creative writing, and so on.

Baron, Naomi S. "Redefining Reading: The Impact of Digital Communication Media." *PMLA*, vol. 128, no. 1, Jan. 2013, pp. 193-200.

Williams, Joy. "Rogue Territory." *The New York Times Book Review*, 9 Nov. 2014, pp. 1+.

+ Plus sign with page number: 2.5.1

Or a **television series**, which is made up of episodes.

"Hush." *Buffy the Vampire Slayer*, created by Joss Whedon, performance by Sarah Michelle Gellar, season 4, episode 10, Mutant Enemy, 1999.

Or a **Web site**, which contains articles, postings, and almost any other sort of work.

Hollmichel, Stefanie. "The Reading Brain: Differences between Digital and Print." *So Many Books*, 25 Apr. 2013,

An issue of a **comic book** is contained by the series of which it is part. If the issue also stands on its own, its title is italicized. In the Clowes example below, *David Boring* is the title of a stand-alone issue, while *Eightball* is the title of the series. In the Soule example, the issue and series are both titled *She-Hulk*; stating the issue title alone identifies the source sufficiently.

Clowes, Daniel. *David Boring*. *Eightball*, no. 19, Fantagraphics, 1998.

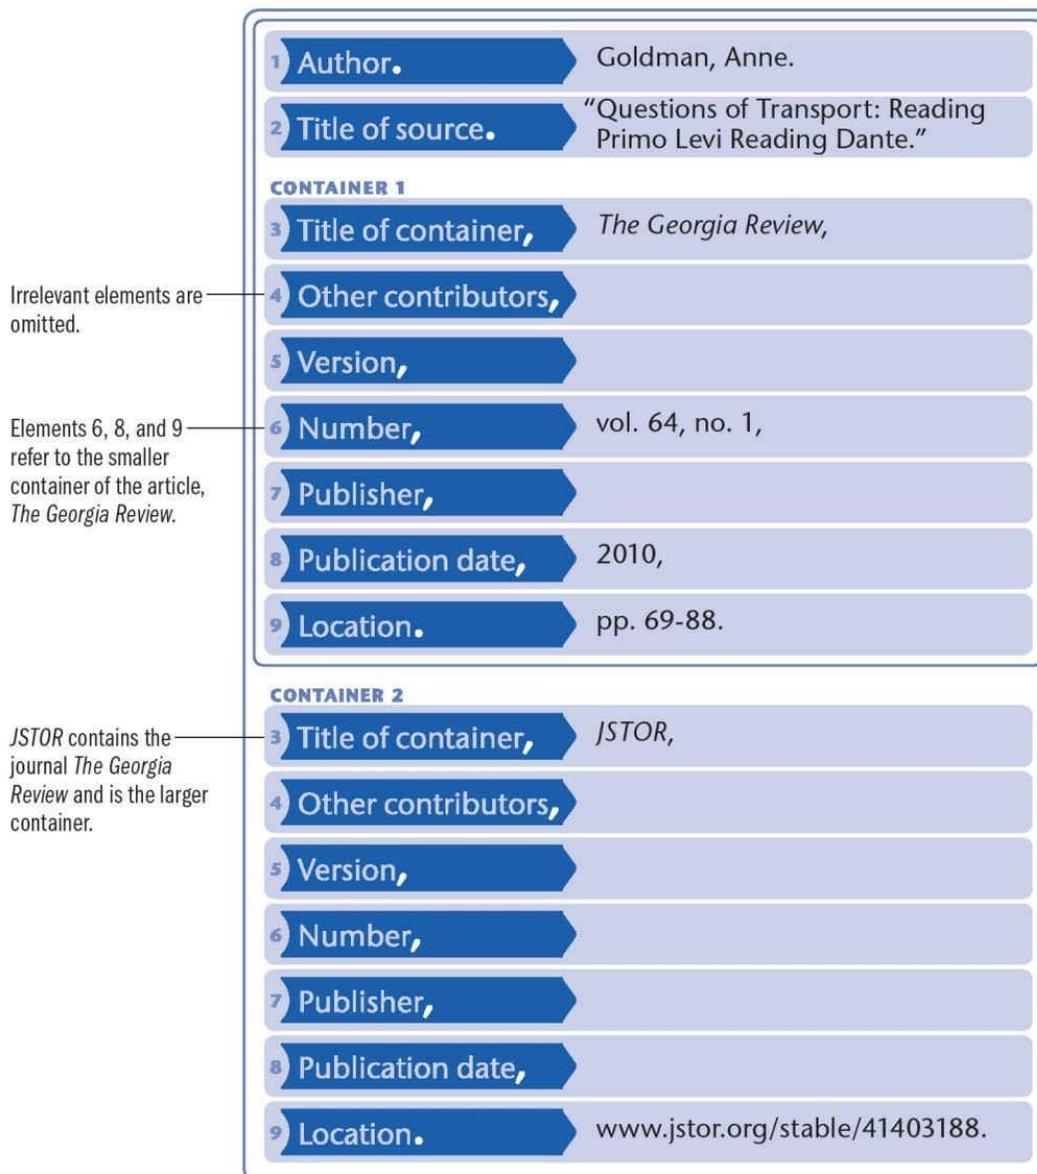

Soule, Charles, et al. *She-Hulk*. No. 1, Marvel Comics, 2014.

The above examples show works with one container. A container can, however, be nested in a larger container. A blog, for instance, may form part of a network of similar blogs. The complete back issues of a journal may be stored on a digital platform such as *JSTOR*. A book of short stories may be read on *Google Books*. A television series may be watched on a network like *Netflix*. Sometimes a source is part of two separate containers, both of which are relevant to your documentation. For example, an excerpt from a novel may be collected in a textbook of readings. Documenting the containers in which sources are found is increasingly important, as more and more works are retrieved through databases. Your reader needs to know where you found your sources since one copy of a work may differ from other copies.

It is usually best to account for all the containers that enclose your source, particularly when they are nested. Each container likely provides useful information for a reader seeking to

understand and locate the original source. Add core elements 3–9 (from “Title of container” to “Location”) to the end of the entry to account for each additional container. The examples on [pages 32–36](#) use a template made up of the core elements to show you how to construct entries composed of two containers. (See the back of the book for a fill-in template that you can use to create entries.)

An article by Anne Goldman appeared in a journal, *The Georgia Review*, in 2010. Back issues of *The Georgia Review* are contained in *JSTOR*, an online database of journals and books.

Goldman, Anne. "Questions of Transport: Reading Primo Levi Reading Dante." *The Georgia Review*, vol. 64, no. 1, 2010, pp. 69-88. *JSTOR*, www.jstor.org/stable/41403188.

"Under the Gun," broadcast in 2013, is an episode in the television series *Pretty Little Liars*. The series was watched online through *Hulu*.

1 Author.

A novel by W. D. Howells takes up all of volume 5 of a multivolume edition of his works published by Indiana University Press. The volumes in the edition were published over a span of years.

When a publication fact applies to more than one container, the fact is cited in the last relevant container. Hence, the publisher is omitted here and included in container 2.

1	Author.	Howells, W. D.
2	Title of source.	<i>Their Wedding Journey.</i>
CONTAINER 1

Howells, W. D. *Their Wedding Journey.* Edited by John K. Reeves, 1968. *A Selected Edition of W. D. Howells,* general editor, Edwin H. Cady, vol. 5, Indiana UP, 1968-83.

There may be more than one correct entry for a source. The facts here about the multivolume edition (container 2) would be useful in some projects, but in a project where the documentation serves only to identify the sources used, this minimal entry would be acceptable:

Howells, W. D. *Their Wedding Journey.* Edited by John K. Reeves, Indiana UP, 1968.

4 Other contributors,

Aside from an author whose name appears at the start of the entry, other people may be credited in the source as contributors. If their participation is important to your research or to the identification of the work, name the other contributors in the entry. Precede each name (or each group of names, if more than one person performed the same function) with a description of the role. Below are common descriptions.

A few other kinds of contributors (e.g., guest editors, general editors) cannot be described with a phrase like those above. The role must instead be expressed as a noun followed by a comma.

general editor, Edwin H. Cady

The **editors** of scholarly editions and of collections and the **translators** of works originally published in another language are usually recorded in documentation because they play key roles.

Chartier, Roger. *The Order of Books: Readers, Authors, and Libraries in Europe between the Fourteenth and Eighteenth Centuries*. Translated by Lydia G. Cochrane, Stanford UP, 1994.

Dewar, James A., and Peng Hwa Ang. "The Cultural Consequences of Printing and the Internet." *Agent of Change: Print Culture Studies after Elizabeth L. Eisenstein*, edited by Sabrina Alcorn Baron et al., U of Massachusetts P / Center for the Book, Library of Congress, 2007, pp. 365-77.

When three or more other contributors perform the same function, give the name that is listed first in the source and follow it with *et al.*

If a source such as a film, television episode, or performance has **many contributors**, include the ones most relevant to your project. For example, if you are writing about a television episode and focus on a key character, you might mention the series creator and the actor who portrays the character.

"Hush." *Buffy the Vampire Slayer*, created by Joss Whedon, performance by Sarah Michelle Gellar, season 4, episode 10, Mutant Enemy, 1999.

A source contained in a collection may have a **contributor who did not play a role in the entire collection**. For instance, stories and poems in an anthology are often translated by various hands. Identify such a contributor after the title of the source rather than after that of the collection.

Fagih, Ahmed Ibrahim al-. *The Singing of the Stars*. Translated by Leila El Khalidi and Christopher Tingley. *Short Arabic Plays: An Anthology*, edited by Salma Khadra Jayyusi, Interlink Books, 2003, pp. 140-57.

5 Version,

+ [More about versions:](#) [2.3](#)

If the source carries a notation indicating that it is a version of a work released in more than one form, identify the version in your entry. Books are commonly issued in versions called *editions*. A revised version of a book maybe labeled *revised edition* or be numbered (*second edition*, etc.). Versions of books are sometimes given other descriptions as well.

The Bible. Authorized King James Version, Oxford UP, 1998.

Cheyfitz, Eric. *The Poetics of Imperialism: Translation and Colonization from The Tempest to Tarzan*. Expanded ed., U of Pennsylvania P, 1997.

Miller, Casey, and Kate Swift. *Words and Women*. Updated ed., HarperCollins Publishers, 1991.

Newcomb, Horace, editor. *Television: The Critical View*. 7th ed., Oxford UP, 2007.

Works in other media may also appear in versions.

Schubert, Franz. *Piano Trio in E Flat Major D 929*. Performance by Wiener Mozart-Trio, unabridged version, Deutsch 929, Preiser Records, 2011.

Scott, Ridley, director. *Blade Runner*. 1982. Performance by Harrison Ford, director's cut, Warner Bros., 1992.

Shakespeare, William. *The Tragedy of Othello*. Edited by Barbara Mowat and Paul Werstine, version 1.3.1, Luminary Digital Media, 2013.

6 Number,

+ [More about numbers:](#) [1.4](#)

The source you are documenting may be part of a numbered sequence. A text too long to be printed in one book, for instance, is issued in multiple volumes, which may be numbered. If you consult **one volume of a numbered multivolume set**, indicate the volume number.

Rampersad, Arnold. *The Life of Langston Hughes*. 2nd ed., vol. 2, Oxford UP, 2002.

Wellek, René. *A History of Modern Criticism, 1750-1950*. Vol. 5, Yale UP, 1986.

Journal issues are typically numbered. Some journals use both **volume and issue numbers**. In general, the issues of a journal published in a single year compose one volume. Usually, volumes are numbered sequentially, while the numbering of issues starts over with 1 in each new volume.

Baron, Naomi S. "Redefining Reading: The Impact of Digital Communication Media." *PMLA*, vol. 128, no. 1, Jan. 2013, pp. 193-200.

Other journals do not use volume numbers but instead number all the issues in sequence.

Kafka, Ben. "The Demon of Writing: Paperwork, Public Safety, and the Reign of Terror." *Representations*, no. 98, 2007, pp. 1-24.

Comic books are commonly numbered like journals—for instance, with issue numbers.

Clowes, Daniel. *David Boring*. *Eightball*, no. 19, Fantagraphics, 1998.

The **seasons of a television series** are typically numbered in sequence, as are the **episodes** in a season. Both numbers should be recorded in the works-cited list if available.

“Hush.” *Buffy the Vampire Slayer*, created by Joss Whedon, performance by Sarah Michelle Gellar, season 4, episode 10, Mutant Enemy, 1999.

If your source uses another numbering system, include the number in your entry, preceded by a term that identifies the kind of division the number refers to.

➤ **Publisher,**

+ [More about publishers: 1.6.3](#) [2.4](#)

The publisher is the organization primarily responsible for producing the source or making it available to the public. If two or more organizations are named in the source and they seem equally responsible for the work, cite each of them, separating the names with a forward slash (/). But if one of the organizations had primary responsibility for the work, cite it alone.

To determine the publisher of a **book**, look first on the title page. If no publisher's name appears there, look on the copyright page (usually the reverse of the title page).

Jacobs, Alan. *The Pleasures of Reading in an Age of Distraction*. Oxford UP, 2011.

Lessig, Lawrence. *Remix: Making Art and Commerce Thrive in the Hybrid Economy*. Penguin Press, 2008.

Films and television series are often produced and distributed by several companies performing different tasks. When documenting a work in film or television, you should generally cite the organization that had the primary overall responsibility for it.

Kuzui, Fran Rubel, director. *Buffy the Vampire Slayer*. Twentieth Century Fox, 1992.

Web sites are published by various kinds of organizations, including museums, libraries, and universities and their departments. The publisher's name can often be found in a copyright notice at the bottom of the home page or on a page that gives information about the site.

Harris, Charles "Teenie." *Woman in Paisley Shirt behind Counter in Record Store*. Teenie Harris Archive, Carnegie Museum of Art, Pittsburgh, teenie.cmoa.org/interactive/index.html#date08.

Manifold Greatness: The Creation and Afterlife of the King James Bible. Folger Shakespeare Library / Bodleian Libraries, U of Oxford / Harry Ransom Center, U of Texas, Austin, manifoldgreatness.org.

A **blog network** may be considered the publisher of the blogs it hosts.

Clancy, Kate. "Defensive Scholarly Writing and Science Communication." *Context and Variation*, Scientific American Blogs, 24 Apr. 2013, blogs.scientificamerican.com/context-and-variation/2013/04/24/defensive-scholarlywriting-and-science-communication/.

A publisher's name may be omitted for the following kinds of publications, either because the publisher need not be given or because there is no publisher.

- A periodical (journal, magazine, newspaper)
- A work published by its author or editor
- A Web site whose title is essentially the same as the name of its publisher

A Web site not involved in producing the works it makes available (e.g., a service for users' content like *WordPress.com* or *YouTube*, an archive like *JSTOR* or *ProQuest*). If the contents of

the site are organized into a whole, as the contents of *YouTube*, *JSTOR*, and *ProQuest* are, the site is named earlier as a container, but it still does not qualify as a publisher of the source.

8 Publication date,

Sources—especially those published online—may be associated with more than one publication date. For instance, an article collected in a book may be accompanied by a note saying that the article appeared years earlier in a journal. A work online may have been published previously in another medium (as a book, a broadcast television program, a record album, etc.).

When a source carries more than one date, cite the date that is most meaningful or most relevant to your use of the source. For example, if you consult an **article on the Web site of a news organization** that also publishes its articles in print, the date of online publication may appear at the site along with the date when the article appeared in print. Since you consulted only the online version of the article, ignore the date of the print publication.

Deresiewicz, William. “The Death of the Artist—and the Birth of the Creative Entrepreneur.” *The Atlantic*, 28 Dec. 2014, www.theatlantic.com/magazine/archive/2015/01/the-death-of-the-artist-and-the-birth-of-the-creative-entrepreneur/383497/.

A reader of the print version would find only one date of publication in the source and would produce the following entry.

Deresiewicz, William. “The Death of the Artist—and the Birth of the Creative Entrepreneur.” *The Atlantic*, Jan.-Feb. 2015, pp. 92-97.

Whether to give the year alone or to include a month and day usually depends on your source: write the full date as you find it there. Occasionally, you must decide how full the cited date will be. For instance, if you are documenting an **episode of a television series**, the year of its original release may suffice.

“Hush.” *Buffy the Vampire Slayer*, created by Joss Whedon, performance by Sarah Michelle Gellar, season 4, episode 10, Mutant Enemy, 1999.

However, if you are discussing, say, the historical context in which the episode originally aired, you may want to supply the month and day along with the year.

“Hush.” *Buffy the Vampire Slayer*, created by Joss Whedon, performance by Sarah Michelle Gellar, season 4, episode 10, WB Television Network, 14 Dec. 1999.

(“Mutant Enemy,” in the first example for “Hush,” is the primary production company. In the second example, we replaced it with “WB Television Network” [on which the episode originally aired], in keeping with the decision to specify the date of airing.)

If you are exploring features of that episode found on the season’s **DVD set**, your entry will be about the discs and thus will include the date of their release. (In the below version, the container title is that of the DVD set.)

“Hush.” 1999. *Buffy the Vampire Slayer: The Complete Fourth Season*, created by Joss Whedon, performance by Sarah Michelle Gellar, episode 10, Twentieth Century Fox, 2003, disc 3.

In this version, the container title is that of the DVD set.

An entry for a **video on a Web site** includes the date when the video was posted there.

“*Buffy the Vampire Slayer: Unaired Pilot 1996.*” *YouTube*, uploaded by Brian Stowe, 28 Jan. 2012, www.youtube.com/watch?v=WR3J-v7QXXw.

(The above example omits the creator, the performer, and other facts about the series because they are not stated in this source.)

Many kinds of **articles on the Web** plainly carry dates of publication.

Hollmichel, Stefanie. “The Reading Brain: Differences between Digital and Print.” *So Many Books*, 25 Apr. 2013, somanycbooksblog.com/2013/04/25/the-reading-brain-differences-between-digital-and-print/.

Comments posted on Web pages are usually dated. If an article, a comment, or another source on the Web includes a time when the work was posted or last modified, include the time along with the date.

Jeane. Comment on “The Reading Brain: Differences between Digital and Print.” *So Many Books*, 25 Apr. 2013, 10:30 p.m., somanycbooksblog.com/2013/04/25/the-reading-brain-differences-between-digital-and-print/#comment-83030.

When you document a **Web project as a whole**, cite a range of dates if the project was developed overtime.

Eaves, Morris, et al., editors. *The William Blake Archive*. 1996-2014,

An **issue of a periodical** (journal, magazine, newspaper) usually carries a date on its cover or title page. Periodicals vary in their publication schedules: issues may appear every year, season, month, week, or day.

Baron, Naomi S. "Redefining Reading: The Impact of Digital Communication Media." *PMLA*, vol. 128, no. 1, Jan. 2013, pp. 193-200.

Belton, John. "Painting by the Numbers: The Digital Intermediate." *Film Quarterly*, vol. 61, no. 3, Spring 2008, pp. 58-65. [Seasons in the works-cited list: 1.5](#)

Kafka, Ben. "The Demon of Writing: Paperwork, Public Safety, and the Reign of Terror." *Representations*, no. 98, 2007, pp. 1-24.

When documenting a **book**, look for the date of publication. [+ Optionally citing a date of original publication](#) on the title page. If the title page lacks a date, check the book's copyright page (usually the reverse of the title page). If more than one date appears on the copyright page, select the most recent one (see [fig. 5](#)).

Ellison, Ralph. *Invisible Man*. Vintage Books, 1995.

The second and later editions of a book may contain the dates of all the editions. Cite the date of the edition you used, normally the date on the title page or the last date listed on the copyright page. Do not take the publication dates of books from an outside resource—such as a bibliography, an online catalog, or a bookseller like *Amazon*—since the information there may be inaccurate (see [fig. 6](#)).

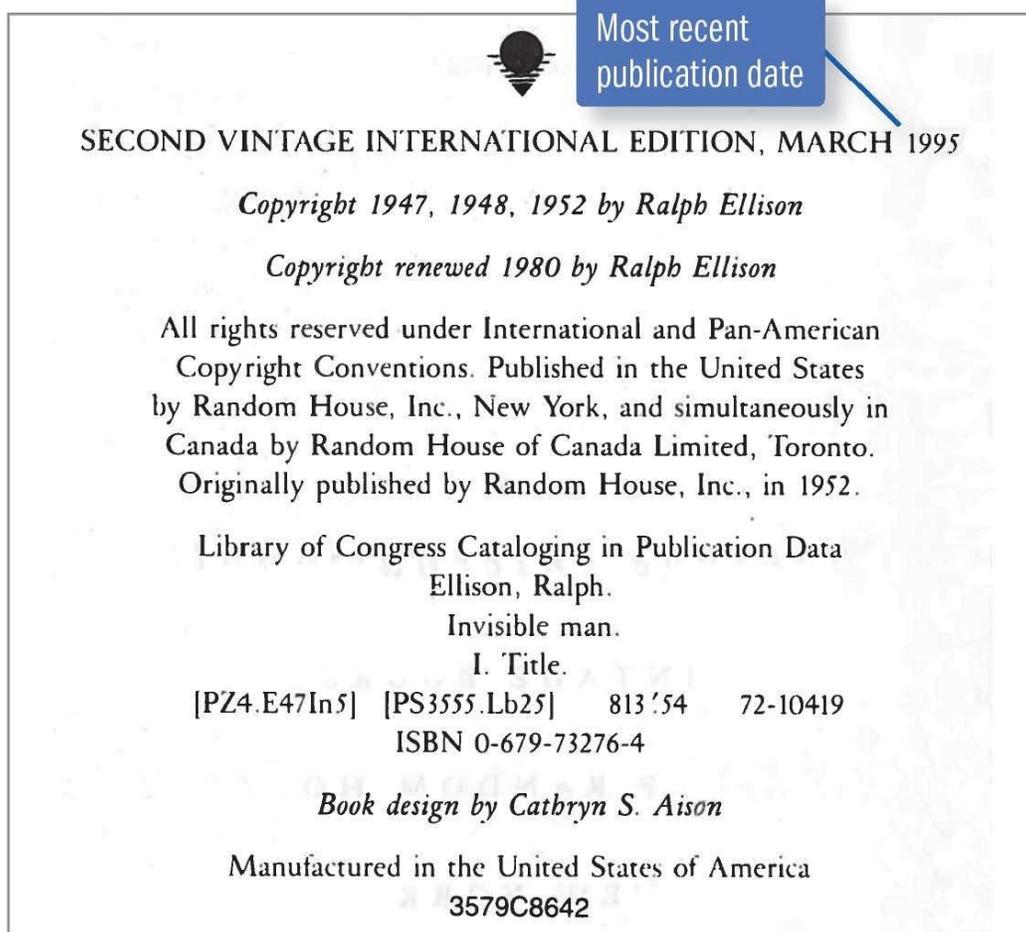

Fig. 5. The copyright page of a book. There is no publication date on the title page of this book.

Location.

+ [More about locations: 2.5](#)

How to specify a work's location depends on the medium of publication. In print sources a **page number** (preceded by *p.*) or a **range of page numbers** (preceded by *pp.*) specifies the location of a text in a container such as a book anthology or a periodical.

Adichie, Chimamanda Ngozi. "On Monday of Last Week." *The Thingaround Your Neck*, Alfred A. Knopf, 2009, pp. 74-94.

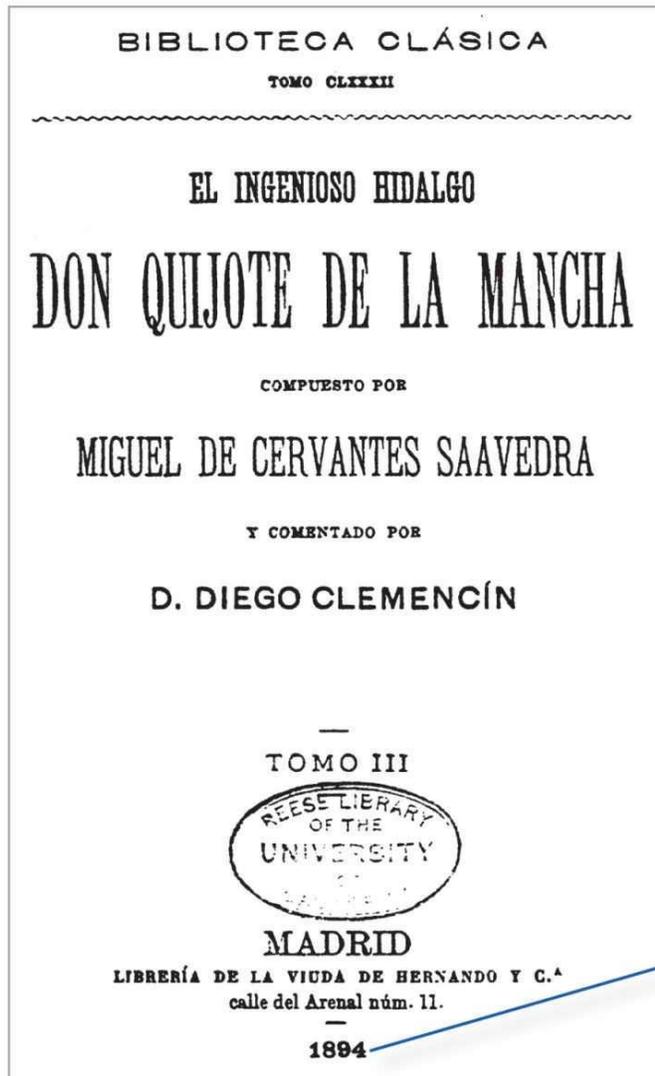

Baron, Naomi S. "Redefining Reading: The Impact of Digital Communication Media." *PMLA*, vol. 128, no. 1, Jan. 2013, pp. 193-200.

Deresiewicz, William. "The Death of the Artist—and the Birth of the Creative Entrepreneur." *The Atlantic*, Jan.-Feb. 2015, pp. 92-97.

El ingenioso hidalgo Don Quijote de la Mancha, compuesto por Miguel de Cervantes Saavedra y comentado por D. Diego Clemencin. v.3
by Cervantes Saavedra, Miguel de, 1547-1616.
Published 1984

Publication date according to online database

Publication date of original work

Fig. 6. The listing for a book in an online database (*above*) and the title page of the book (*below*). The book was published in 1894, but the database incorrectly shows 1984 as the publication date. Publication facts should be taken from the work itself, not from another source.

The location of an online work is commonly indicated by its **URL**, or Web address.

Deresiewicz, William. "The Death of the Artist—and the Birth of the Creative Entrepreneur." *The Atlantic*, 28 Dec. 2014, www.theatlantic.com/magazine/archive/2015/01/the-death-of-the-artist-and-the-birth-of-the-creative-entrepreneur/383497/.

Hollmichel, Stefanie. "The Reading Brain: Differences between Digital and Print." *So Many Books*, 25 Apr. 2013, somanycbooksblog.com/2013/04/25/the-reading-brain-differences-between-digital-and-print/.

Visualizing Emancipation. Directed by Scott Nesbit and Edward L. Ayers, dsl.richmond.edu/emancipation/.

While URLs define where online material is located, they have several disadvantages: they can't be clicked on in print, they clutter the works-cited list, and they tend to become rapidly obsolete. Even an outdated URL can be useful, however, since it provides readers with information about where the work was once found. Moreover, in digital formats URLs may be clickable, connecting your reader directly to your sources. We therefore recommend the inclusion of URLs in the works-cited list, but if your instructor prefers that you not include them, follow his or her directions.

The publisher of a work on the Web can change its URL at any time. If your source offers URLs that it says are stable (sometimes called *permalinks*), use them in your entry (see [fig. 7](#)). Some publishers assign **DOIs**, or digital object identifiers, to their online publications. A DOI remains attached to a source even if the URL changes. When possible, citing a DOI is preferable to citing a URL.

Chan, Evans. "Postmodernism and Hong Kong Cinema." *Postmodern Culture*,
vol. 10, no. 3, May 2000. *Project Muse*, [doi:10.1353/pmc.2000.0021](https://doi.org/10.1353/pmc.2000.0021).
[URLs and DOIs: 2.5.2](#)

Television Network, 2003, **disc**

3.

A physical object that you experienced firsthand (not in a reproduction), such as a work of art in a museum or an artifact in an archive, is located in a **place**, commonly an institution. Give the name of the place and of its city (but omit the city if it is part of the place's name).

Bearden, Romare. *The Train*. 1975, **Museum of Modern Art, New York.**

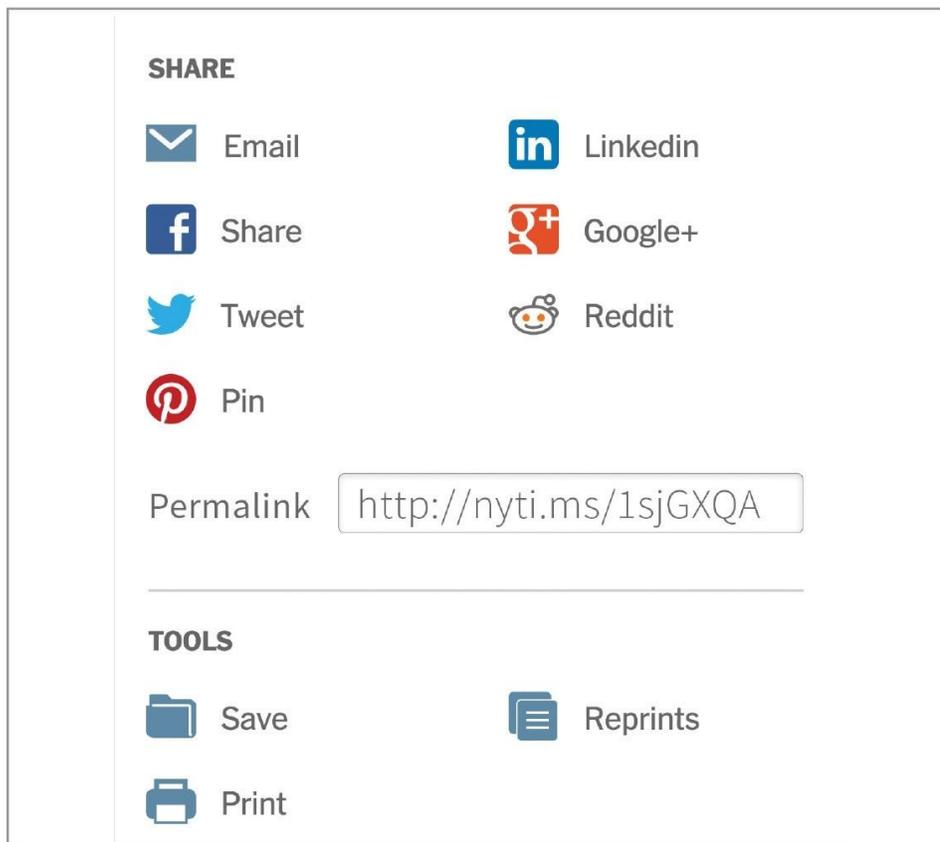

Fig. 7. The stable URL of a Web page. The features for using the page include a “permalink,” a URL that the publisher promises not to change.

The location of an object in an archive may also include a **number or other code** that the archive uses to identify the object.

Chaucer, Geoffrey. *The Canterbury Tales*. Circa 1400-10, British Library, London, Harley MS 7334.

Record the location of a performance, a lecture, or another form of live presentation by naming the **venue and its city** (but omit the city if it is part of the venue’s name).

Atwood, Margaret. “Silencing the Scream.” Boundaries of the Imagination Forum. MLA Annual Convention, 29 Dec. 1993, Royal York Hotel, Toronto.

OPTIONAL ELEMENTS

The core elements of the entry—which should generally be included, if they exist—may be accompanied by optional elements, at the writer’s discretion. Some of the optional elements are added to the end of the entry, while others are placed in the middle, after core elements that they relate to. Your decision whether to include optional elements depends on their importance to your use of the source.

Date of Original Publication

When a source has been republished, consider giving the date of original publication if it will provide the reader with insight into the work’s creation or relation to other works. The date of original publication is placed immediately after the source’s title.

Franklin, Benjamin. “Emigration to America.” 1782. *The Faber Book of America*, edited by Christopher Ricks and William L. Vance, Faber and Faber, 1992, pp. 24-26.

Newcomb, Horace, editor. *Television: The Critical View*. 1976. 7th ed., Oxford UP, 2007.

Scott, Ridley, director. *Blade Runner*. 1982. Performance by Harrison Ford, director’s cut, Warner Bros., 1992.

City of Publication

The traditional practice of citing the city where the publisher of a book was located usually serves little purpose today. There remain a few circumstances in which the city of publication might matter, however.

Books published before 1900 are conventionally associated with their cities of publication. In an entry for a

pre-1900 work, you may give the city of publication in place of the publisher's name.

Goethe, Johann Wolfgang von. *Conversations of Goethe with Eckermann and Soret*. Translated by John Oxenford, new ed., London, 1875.

In addition, a publisher with offices in more than one country may release a novel in two versions—perhaps with different spelling and vocabulary. If you read an unexpected version of a text (such as the British edition when you are in the United States), stating the city of publication will help your readers understand your source. Place the name of the city before that of the publisher.

Rowling, J. K. *Harry Potter and the Philosopher's Stone*. London, Bloomsbury, 1997.

Finally, include the city of publication whenever it might help a reader locate a text released by an unfamiliar publisher located outside North America.

Other Facts about the Source

There may be other information that will help your reader track down the original source. You might, for instance, include the total number of volumes in a **multivolume publication**.

Caro, Robert A. *The Passage of Power*. 2012. *The Years of Lyndon Johnson*, vol. 4, Vintage Books, 1982-. 4 vols.

Rampersad, Arnold. *The Life of Langston Hughes*. 2nd ed., Oxford UP, 2002. 2 vols.

Wellek, René. *A History of Modern Criticism, 1750-1950*. Vol. 8, Yale UP, 1992. 8 vols.

If the title page or a preceding page indicates that a book you are documenting is part of a **series**, you might include the series name, neither italicized nor enclosed in quotation marks, and the number of the book (if any) in the series.

Kuhnheim, Jill S. "Cultures of the Lyric and Lyrical Culture: Teaching Poetry and Cultural Studies." *Cultural Studies in the Curriculum: Teaching Latin America*, edited by Danny J. Anderson and Kuhnheim, MLA, 2003, pp. 105-22. Teaching Languages, Literatures, and Cultures. [Last name only](#)

Neruda, Pablo. *Canto General*. Translated by Jack Schmitt, U of California P, 1991. Latin American Literature and Culture 7.

If the source is an **unexpected type of work**, you may identify the type with a descriptive term. For instance, if you studied a radio broadcast by reading its transcript, the term *Transcript* will indicate that you did not listen to the broadcast.

Fresh Air. Narrated by Terry Gross, National Public Radio, 20 May 2008. Transcript.

Similarly, a **lecture or other address** heard in person maybe indicated as such.

Atwood, Margaret. "Silencing the Scream." Boundaries of the Imagination Forum. MLA Annual Convention, 29 Dec. 1993, Royal York Hotel, Toronto. Address.

When a source was previously published in a form other than the one in which you consulted it, you might include **information about the prior publication**.

Johnson, Barbara. "My Monster / My Self." *The Barbara Johnson Reader: The Surprise of Otherness*, edited by Melissa Feuerstein et al., Duke UP, 2014, pp. 179-90. Originally published in *Diacritics*, vol. 12, no. 2, 1982, pp. 2-10.

When documenting a bill, report, or resolution of the United States Congress, [2.1.3](#) you might include the number and session of Congress from which it emerged and specify the document's type and number.

United States, Congress, House, Permanent Select Committee on Intelligence. *Al-Qaeda: The Many Faces of an Islamist Extremist Threat*. Government Printing Office, 2006. 109th Congress, 2nd session, House Report 615.

Date of Access

Since online works typically can be changed or removed at any time, the date on which you accessed online material is often an important indicator of the version you consulted.

"Under the Gun." *Pretty Little Liars*, season 4, episode 6, ABC Family, 16 July 2013. *Hulu*, www.hulu.com/watch/511318. Accessed 23 July 2013.

The date of access is especially crucial if the source provides no date specifying when it was produced or published.

This list of optional elements is not exhaustive. You should carefully consider the source you are documenting and judge whether other kinds of information might help your reader.

In-Text Citations

The second major component of MLA documentation style is the insertion in your text of a brief reference that indicates the source you consulted. The in-text citation should direct the reader unambiguously to the entry in your works-cited list for the source—and, if possible, to a passage in the source—while creating the least possible interruption in your text.

A typical in-text citation is composed of the element that comes first in the entry in the works-cited list (usually the author's name) and a page number. The page number goes in a parenthesis, which is placed, when possible, where there is a natural pause in the text. A parenthetical citation that directly follows a quotation is placed after the closing quotation mark. The other item (usually the author's name) may appear in the text itself or, abbreviated, before the page number in the parenthesis.

According to Naomi Baron, reading is “just half of literacy. The other half is writing” (194).

One might even suggest that reading is never complete without writing. Or

Reading is “just half of literacy. The other half is writing” (Baron 194). One might even suggest that reading is never complete without writing.

Work Cited

Baron, Naomi S. “Redefining Reading: The Impact of Digital Communication Media.” *PMLA*, vol. 128, no. 1, Jan. 2013, pp. 193-200.

A reader interested in your source can flip to the indicated entry in your list of works cited; a reader not

interested in the source can pass over the citation without being distracted. Rarely should the page number be mentioned in the text (e.g., “As Naomi Baron argues on page 194”) since it would disrupt the flow of ideas.

When a quotation, whether of prose or poetry, is so long that it is set off from the text, [Long prose and poetry quotations: 1.3.2 3](#) type a space after the concluding punctuation mark of the quotation and insert the parenthetical citation.

The forms of writing that accompany reading

can fill various roles. The simplest is to make parts of a text prominent (by underlining, highlighting, or adding asterisks, lines, or squiggles). More-reflective responses are notes written in the margins or in an external location—a notebook or a computer file. (Baron 194)

All these forms of writing bear in common the reader’s desire to add to, complete, or even alter the text.

There are circumstances in which a citation like “(Baron 194)” doesn’t provide enough information to lead unambiguously to a specific entry. If you borrow from works by more than one author with the same last name (e.g., Naomi Baron and Sabrina Alcorn Baron), eliminate ambiguity in the citation by adding the author’s first initial (or, if the initial is shared too, the full first name).

Reading is “just half of literacy. The other half is writing” (N. Baron 194). One might even suggest that reading is never complete without writing.

Even if you cite only one author named Baron in your text, “(Baron 194)” is insufficient if more than one work appears

under that author's name in the works-cited list. In that case, include a short form of the source's title.

+ 3.2.1

Reading is “just half of literacy. The other half is writing” (Baron, “Redefining” 194). One might even suggest that reading is never complete without writing.

When an entry in the works-cited list begins with the title of the work—either because the work is anonymous ⁺ or because its author is the organization that published it 2.1.3—your in-text citation contains the title. The title may appear in the text itself or, abbreviated, before the page number in the parenthesis.

Reading at Risk: A Survey of Literary Reading in America

notes that despite an apparent decline in reading during the same period, “the number of people doing creative writing—of any genre, not exclusively literary works—increased substantially between 1982 and 2002” (3).

or

Despite an apparent decline in reading during the same period, “the number of people doing creative writing—of any genre, not exclusively literary works—increased substantially between 1982 and 2002” (*Reading* 3).

Work Cited

Reading at Risk: A Survey of Literary Reading in America.

National Endowment for the Arts, June 2004. Research Division Report 46.

If your source uses explicit paragraph numbers rather than page numbers—as some publications on the Web do—

give the relevant number or numbers, preceded by the label par. or pars. Using abbreviations: 1.6

Change the label appropriately if another kind of part is numbered in the source instead of pages, such as sections (*sec.*, *secs.*) or chapters (*ch.*, *chs.*). If the author's name begins such a citation, place a comma after the name.

There is little evidence here for the claim that "Eagleton has belittled the gains of postmodernism" (Chan, par. 41).

When a source has no page numbers or any other kind of part number, no number should be given in a parenthetical citation. Do not count unnumbered paragraphs or other parts.

"As we read we . . . construct the terrain of a book" (Hollmichel), something that is more difficult when the text reflows on a screen.

In parenthetical citations of a literary work available in multiple editions, such as a commonly studied novel, play, or poem, 3.3.2 it is often helpful to provide division numbers in addition to, or instead of, page numbers, so that readers can find your references in any edition of the work.

Austen begins the final chapter of *Mansfield Park* with a dismissive "Let other pens dwell," thereby announcing her decision to avoid dwelling on the professions of love made by Fanny and Edmund (533; vol. 3, ch. 17).

For works in time-based media, such as audio and video recordings, cite the relevant time or range of times. Give the numbers of the hours, minutes, and seconds as displayed in your media player, separating the numbers with colons.

Buffy's promise that "there's not going to be any incidents like at my old school" is obviously not one on which she can follow through ("*Buffy*" 00:03:16-17).

Identifying the source in your text is essential for nearly every kind of borrowing—not only quotations but also facts and paraphrased ideas. (The only exception is common knowledge.) + The parenthetical citation for a fact or paraphrased idea should be placed as close as possible after the borrowed material, at a natural pause in your sentence, so that the flow of your argument is not disrupted.

While reading may be the core of literacy, Naomi Baron argues that literacy can be complete only when reading is accompanied by writing (194).

OR

While reading may be the core of literacy, literacy can be complete only when reading is accompanied by writing (Baron 194).

The second version above is usually preferable when a single fact or paraphrased idea is attributable to more than one source. List all the sources in the parenthetical citation, separating them with semicolons.

While reading may be the core of literacy, literacy can be complete only when reading is accompanied by writing (Baron 194; Jacobs 55).

Remember that the goal of the in-text citation is to provide enough information to lead your reader directly to the source you used while disrupting the flow of your argument as little as possible.

PART 2

Details of MLA Style

INTRODUCTION

Part 1 of this handbook describes the general principles for documenting research sources in any medium or format. While this mode of citation provides a great deal of flexibility, it nonetheless requires that writers be consistent to avoid confusing the reader. In part 2, accordingly, we address the role of consistency by shifting our emphasis from the descriptive to the prescriptive, first offering recommendations about the mechanics of prose in a research project and then discussing advanced aspects of the works cited list and in-text citations in MLA style. Finally, part 2 considers citations in projects other than the research paper.

1 THE MECHANICS OF SCHOLARLY PROSE

Conventions in academic writing enable readers to focus their attention on what is most important: the author's argument. Following are some of the conventions commonly accepted in scholarly writing.

1.1 Names of Persons

1.1.1 FIRST AND SUBSEQUENT USES OF NAMES

With the exception of very famous persons (such as Shakespeare or Dante), state someone's name fully the first time you use it in your discussion. Write the name accurately, exactly as it appears in your source or in a reference work.

Gabriel García Márquez

Li Ang

Arthur George Rust, Jr.

Victoria M. Sackville-West

Do not change Arthur George Rust, Jr., to Arthur George Rust, for example, or drop the hyphen in Victoria M. Sackville-West. In subsequent uses, you may refer to a person by his or her family name only (unless, of course, you refer to two or more persons with the same family name).

Family names are treated differently in different languages.

[1.1.4](#) In some languages (e.g., Chinese, Hungarian, Japanese, Korean, and Vietnamese), family names precede given names.

1.1.2 TITLES OF AUTHORS

If the name of the author of a source you consulted is given in the source with a title—such as *Dr.*, *Saint*, or *Sir*—generally omit the title in the works-cited list. Similarly, a title should usually not be included when the name is mentioned in the text discussion.

Augustine (not Saint Augustine)

Samuel Johnson (not Dr. Johnson)

Philip Sidney (not Sir Philip Sidney)

1.1.3 NAMES OF AUTHORS AND FICTIONAL CHARACTERS

It is common and acceptable to use simplified names of famous authors.

Dante (Dante Alighieri)

Virgil (Publius Vergilius Maro)

Also acceptable are pseudonyms of authors.

+ [Pseudonyms in the works-cited list: 2.1.1](#)

Molière (Jean-Baptiste Poquelin)

George Eliot (Mary Ann Evans)

Mark Twain (Samuel Clemens)

Refer to fictional characters in your text in the same way that the work of fiction does. You need not always use their full names, and you may retain titles as appropriate (Dr. Jekyll, Madame Defarge).

1.1.4 NAMES IN LANGUAGES OTHER THAN ENGLISH

Asian Languages

The name of the author of a work published in Chinese, Japanese, Korean, or Vietnamese probably appears on the publication with the family name first. If so, in the works-cited list the author's name should be given in that order and not reversed. Since the name is not reversed, no comma is added to it. When the author of a work in English has a Chinese, Japanese, Korean, or Vietnamese name, the name might appear on the publication with the family name first or last. Determine which part is the family name, and reverse the author's name in the works-cited list only if the family name is not first. The following examples are names of writers as they might appear in the source.

Gao Xingjian (family name first)

Kenzaburō Ōe (family name last)

This is how they would appear in the list of works cited.

Gao Xingjian

Ōe, Kenzaburō

And this is how they would appear in a text discussion after the initial use of the full name.

Gao

Ōe

In an English-language context, names of persons, places, and organizations in Asian languages are romanized—spelled in the Latin alphabet as they are pronounced. Various systems of romanization have been devised for most of these languages. For example, the Wade-Giles system was once widely used for Chinese, but pinyin, the official romanization system in mainland China, is now standard among English speakers. In your sources, you may find the same Chinese names written in both systems—for instance, Mao Tse-tung (Wade-Giles) and Mao

Zedong (pinyin). The pinyin forms are preferable, but the names of a few historical figures remain better known in older spellings, which may appear in reference works (e.g., Lao-tzu, Li Po). If you are uncertain how to romanize terms in a particular language, ask your instructor or consult *The Chicago Manual of Style* or [ALA-LC Romanization Tables](#).

French

French *de* following a first name or a title such as *Mme* or *duc* is usually not treated as part of the last name.

La Boétie, Étienne de
Maupassant, Guy de
Nemours, Louis-Charles d'Orléans, duc de

When the last name has only one syllable, however, *de* is usually retained.

de Gaulle, Charles

The preposition also remains, in the form *d'*, when it elides with a last name beginning with a vowel.

d'Arcy, Pierre

The forms *du* and *des*—combinations of *de* with *le* and *les*—are always used with last names and are capitalized.

Des Périers,
Bonaventure Du Bos,
Charles

In English-language contexts, *de* is often treated as part of the last name. De Quincey, Thomas

German

German *von* is generally not treated as part of the last name.

Droste-Hülshoff, Annette von
Kleist, Heinrich von

Some exceptions exist, especially in English-language contexts.

Von Braun, Wernher
Von Trapp, Maria

Italian

The names of many Italians who lived before or during the Renaissance are alphabetized by first name.

Dante Alighieri

But other names of the period follow the standard practice.

Boccaccio, Giovanni

The names of members of historic families are also usually alphabetized by last name.

Medici, Lorenzo de'

In modern times, Italian *da*, *de*, *del*, *della*, *di*, and *d'* are usually capitalized and treated as part of the last name.

D'Annunzio, Gabriele
Da Ponte, Lorenzo
Del Buono, Oreste
Della Robbia, Andrea
De Sica, Vittorio
Di Costanzo, Angelo

Latin

Use the forms of Roman names most common in English. You may include the full name in a parenthesis in the works-cited list.

Cicero (Marcus Tullius Cicero)
Horace (Quintus Horatius Flaccus)
Julius Caesar (Gaius Julius Caesar)
Livy (Titus Livius)
Ovid (Publius Ovidius Naso)
Virgil (Publius Vergilius Maro)

Some medieval and Renaissance figures are best known by their adopted or assigned Latin names.

Albertus Magnus (Albert von Bollstädt)
Copernicus (Mikołaj Kopernik)

Spanish

Spanish *de* is usually not treated as part of the last name.

Madariaga, Salvador de
Rueda, Lope de
Timoneda, Juan de

Spanish *del*, however, which is formed from the fusion of the preposition *de* and the definite article *el*, is capitalized and used with the last name. Del Río, Ángel

A Spanish surname may include both the paternal name and the maternal name, with or without the conjunction *y*. The surname of a married woman usually includes her paternal surname and her husband's paternal surname, connected by *de*. Consult a biographical dictionary for guidance in distinguishing surnames and given names.

Carreño de Miranda, Juan
Cervantes Saavedra, Miguel de
Díaz del Castillo, Bernal

García Márquez, Gabriel
 Larra y Sánchez de Castro, Mariano José
 López de Ayala, Pero
 Matute, Ana María
 Ortegay Gasset, José
 Quevedo y Villegas, Francisco Gómez de
 Sinués de Marco, Maríadel Pilar
 Zayas y Sotomayor, Maríade

Authors commonly known by the maternal portions of their surnames, such as Galdós and Lorca, should nonetheless be alphabetized by their full surnames.

García Lorca, Federico
 Pérez Galdós, Benito

1.2 Titles of Sources

Whenever you use the title of a source in your writing, take the title from an authoritative location in the work, ± not, for example, from the cover or the top of a page. Copy the title without reproducing any unusual typography, such as special capitalization or lowercasing of all letters.

1.2.1 CAPITALIZATION AND PUNCTUATION

When you copy an English title or subtitle, capitalize the first word, the last word, and all principal words, including those that follow hyphens in compound terms. Therefore, capitalize the following parts of speech:

- Nouns (e.g., *flowers*, as in *The Flowers of Europe*)
- Pronouns (e.g., *our*, as in *Save Our Children*; *it*, as in *Some Like It Hot*)
- Verbs (e.g., *watches*, as in *America Watches Television*; *is*, as in *What Is Literature?*)
- Adjectives (e.g., *ugly*, as in *The Ugly Duckling*)

Adverbs (e.g., *slightly*, as in *Only Slightly Corrupt*; *down*, as in *Go Down, Moses*)

Subordinating conjunctions (e.g., *after*, *although*, *as if*, *as soon as*, *because*, *before*, *if*, *that*, *unless*, *until*, *when*, *where*, *while*, as in *One If by Land*)

Do not capitalize the following parts of speech when they fall in the middle of a title:

- Articles (*a*, *an*, *the*, as in *Under the Bamboo Tree*)
- Prepositions (e.g., *against*, *as*, *between*, *in*, *of*, *to*, *as*, *in*, *The Merchant of Venice* and “A Dialogue between the Soul and Body”)
- Coordinating conjunctions (*and*, *but*, *for*, *nor*, *or*, *so*, *yet*, as in *Romeo and Juliet*) The *to* in infinitives (as in *How to Play Chess*)

Capitalize quotations in titles according to the guidelines above.

“I’m Ready for My Close-Up’: Lloyd Webber on Screen”

When an untitled poem is known by its first line or when a short untitled message is identified in the works-cited list by its full text,⁺ the line or full text is reproduced exactly as it appears in the source.

Dickinson’s poem “I heard a Fly buzz—when I died—” contrasts the everyday and the momentous.

Use a colon and a space to separate a title from a subtitle, unless the title ends in a question mark or an exclamation point. Include other punctuation only if it is part of the title or subtitle.

Storytelling and Mythmaking: Images from Film and Literature Whose Music? A Sociology of Musical Language

The following examples illustrate how to capitalize and punctuate a variety of titles:

The Teaching of Spanish in English-Speaking Countries

Life As I Find It (Here *as* is a subordinating conjunction.)

The Artist as Critic (Here *as* is a preposition.)

“Italian Literature before Dante”

“What Americans Stand For”

“Why Fortinbras?”

“Marcel Proust: Archetypal Music—an Exercise in Transcendence”

1.2.2 ITALICS AND QUOTATION MARKS

Most titles + Handling titles within titles: 1.2.4 should be italicized or enclosed in quotation marks. In general, italicize the titles of sources that are self-contained and independent (e.g., books) and the titles of containers (e.g., anthologies); use quotation marks for the titles of sources that are contained in larger works (e.g., short stories).

The Awakening (book)

The Metamorphosis (novella)

“Literary History and Sociology” (journal article)

Stanford Encyclopedia of Philosophy (Web site)

“Free Will” (article on a Web site)

This convention has a few exceptions. Names in the following categories are capitalized like titles but are not italicized or enclosed in quotation marks.

Scripture

Bible

Old Testament

Genesis

Gospels

Talmud

Koran *or* Quran *or* Qur'an

Upanishads

Titles of individual published editions of scriptural writings, however, should be italicized and treated like any other published work.

The Interlinear Bible

The Talmud of the Land of Israel: A Preliminary Translation and Explanation
The Upanishads: A Selection for the Modern Reader

Laws, Acts, and Similar Political Documents

Magna Carta

Declaration of Independence

Bill of Rights

Treaty of Trianon

Musical Compositions Identified by Form, Number, and Key

Beethoven's Symphony no. 7 in A, op. 92

Vivaldi's Concerto for Two Trumpets and Strings in C, RV539

Series

Critical American Studies

Bollingen Series

Conferences, Seminars, Workshops, and Courses

International Symposium on Cultural Diplomacy 2015

Introduction to Calculus

Words designating the divisions of a work are also not italicized or put in quotation marks, nor are they capitalized when used in the text (“The author says in her preface . . . ,” “In canto 32 Ariosto writes . . .”).

scene 7 stanza

20 chapter 2

bibliography canto

32 act 4

index

1.2.3 SHORTENED TITLES

When you refer to a title in your discussion, state the title in full, though you may omit a nonessential subtitle. If you refer to a title often in your discussion, you may, after stating **the title in full at least once**, use an abbreviation, [Abbreviating titles in in-text citations: 3.2.1](#) preferably a familiar or obvious one (e.g., “Nightingale” for “Ode to a Nightingale”). If the abbreviation may not be clear on its own, introduce it in a parenthesis when the title is first given in full: “In *All’s Well That Ends Well* (AWW), Shakespeare. . . .”

It is common in legal scholarship to refer to a law case by the first nongovernmental party. For instance, when commenting on a case named *NLRB v. Yeshiva University* (involving the National Labor Relations Board, a federal

agency), scholars are likely to use *Yeshiva* as a short title. But in MLA style, readers need the first part of the name (*NLRB*) to locate the full citation in the list of works cited. Thus, if you follow the standard practice of using *Yeshiva* in your text discussion, you will need to include *NLRB* in your parenthetical citation.

1.2.4 TITLES WITHIN TITLES

Italicize a title normally indicated by italics when it appears within a title enclosed in quotation marks.

“*Romeo and Juliet* and Renaissance Politics” (an article about a play)

“Language and Childbirth in *The Awakening*” (an article about a novel)

When a title normally indicated by quotation marks appears within another title requiring quotation marks, enclose the inner title in single quotation marks.

“Lines after Reading ‘Sailing to Byzantium’” (a poem about a poem)

“The Uncanny Theology of ‘A Good Man Is Hard to Find’” (an article about a short story)

Use quotation marks around a title normally indicated by quotation marks when it appears within an italicized title.

“*The Lottery*” and *Other Stories* (a book of stories)

New Perspectives on “The Eve of St. Agnes” (a book about a poem)

If a period is required after an italicized title that ends with a quotation mark, place the period before the quotation mark.

The study appears in *New Perspectives on “The Eve of St. Agnes.”*

When a normally italicized title appears within another italicized title, the title within is neither italicized nor enclosed in quotation marks; it is in roman.

Approaches to Teaching Murasaki Shikibu's The Tale of Genji (a book about a novel)

From The Lodger to The Lady Vanishes: Hitchcock's Classic British Thrillers (a book about films)

1.2.5 TITLES OF SOURCES IN LANGUAGES OTHER THAN ENGLISH

If your readers are unlikely to understand the title of a non-English language work in your text discussion, provide a translation

[Translations of titles in the works-cited list: 2.2.2](#) in a parenthesis.

Isabel Allende based her novel *La casa de los espíritus* (*The House of the Spirits*) on a letter she had written to her dying grandfather.

French

In prose and verse, French capitalization is the same as English except that the following terms are not capitalized in French unless they begin sentences or, sometimes, lines of verse: (1) the subject pronoun *je* (“I”), (2) the names of months and days of the week, (3) the names of languages, (4) adjectives derived from proper nouns, (5) titles preceding personal names, and (6) the words meaning “street,” “square,” “lake,” “mountain,” and so on, in most place-names.

In a title or a subtitle, capitalize only the first word and all words normally capitalized.

La chambre claire: Note sur la photographie

Du côté de chez Swann

La guerre de Troie n'aura pas lieu

Nouvelle revue d'onomastique

German

In German capitalize all nouns—including adjectives, infinitives, pronouns, prepositions, and other parts of speech used as nouns—as well as the pronoun *Sie* (“you”) and its possessive, *Ihr* (“your”), and their inflected forms. The following terms are generally not capitalized unless they begin sentences or, usually, lines of verse: (1) the subject pronoun *ich* (“I”), (2) the names of languages and of days of the week used as adjectives, adverbs, or complements of prepositions, and (3) adjectives and adverbs formed from proper nouns, except when the proper nouns are names of persons and the adjectives and adverbs refer to the persons’ works or deeds.

In a title or a subtitle, capitalize only the first word and all words normally capitalized.

Lethé: Kunst und Kritik des Vergessens

Ein treuer Diener seines Herrn

Zeitschrift für vergleichende Sprachforschung

Italian

In prose and verse, Italian capitalization is the same as English except that in Italian, centuries and other large divisions of time are capitalized (*il Seicento*) and the following terms are not capitalized unless they begin sentences or, usually, lines of verse: (1) the subject pronoun *io* (“I”), (2) the names of months and days of the week, (3) the names

of languages and nationalities, (4) nouns, adjectives, and adverbs derived from proper nouns, (5) titles preceding personal names, and (6) the words meaning “street,” “square,” and so on, in most place-names.

In a title or a subtitle, capitalize only the first word and all words normally capitalized.

L'arte tipografica in Urbino

Bibliografia della critica pirandelliana

Collezione di classici italiani

Luigi Pulci e la Chimera: Studi sull'allegoria nel

Morgante Studi petrarcheschi

Latin

Although practice varies, Latin most commonly follows the English rules for capitalization, except that *ego* (“I”) is not capitalized. In the title or subtitle of a classical or medieval work, however, capitalize only the first word and all words normally capitalized.

De senectute

Pro Marcello

Titles of postmedieval works in Latin are often capitalized like English titles.  [1.2.1](#)

Tractatus de Intellectus Emendatione

Spanish

In prose and verse, Spanish capitalization is the same as English except that the following terms are not capitalized in

Spanish unless they begin sentences or, sometimes, lines of verse: (1) the subject pronoun *yo* (“I”), (2) the names of months and days of the week, (3) the names of languages and nationalities, (4) nouns and adjectives derived from proper nouns, (5) titles preceding personal names, and (6) the words meaning “street,” “square,” and so on, in most place-names.

In a title or a subtitle, capitalize only the first word and all words normally capitalized.

Breve historia del ensayo hispanoamericano

Cortejo a lo prohibido: Lectoras y escritoras en la España moderna

Extremos de América

La gloria de don Ramiro

Historia verdadera de la conquista de la

Nueva España Revista de filología española

Romanized Languages

If you discuss works in a language not written in the Latin alphabet (e.g., Arabic, Chinese, Greek, Hebrew, Japanese, Russian), give their titles and quotations from them [1.3.8](#) consistently in the original writing system or in romanization. In a romanized title or subtitle, capitalize the first word and any words that would be capitalized in English prose.

ثرثرة فوق النيل (*Adrift on the Nile*)

or

Thartharah fawqa al-Nīl (*Adrift on the Nile*)

If you are uncertain how to romanize terms in a particular language, ask your instructor or consult *The Chicago Manual of Style* or *ALA-LC Romanization Tables*.

Other Languages

When you copy a title or a subtitle in nearly any language using the Latin alphabet not discussed above, it is appropriate to capitalize only the first word and all words capitalized in regular prose in the same work.

1.3 Quotations

1.3.1 USE AND ACCURACY OF QUOTATIONS

Quotations are most effective in research writing when used selectively. Quote only words, phrases, lines, and passages that are particularly apt, and keep all quotations as brief as possible. Your project should be about your own ideas, and quotations should merely help you explain or illustrate them.

The accuracy of quotations is crucial. They must reproduce the original sources exactly. Unless indicated in [square brackets or parentheses](#), [1.3.6](#) changes must not be made in the spelling, capitalization, or interior punctuation of the source. You must construct a clear, grammatically correct sentence that allows you to introduce or incorporate a quotation with complete accuracy. Alternatively, you may paraphrase the original and quote only fragments, which may be easier to integrate into the flow of your writing. If you change a quotation in any way, make the alteration clear to the reader by following the rules and recommendations below.

1.3.2 PROSE

If a prose quotation runs no more than four lines and requires no special emphasis, put it in quotation marks and incorporate it into the text.

“It was the best of times, it was the worst of times,” wrote Charles Dickens of the eighteenth century.

You need not always reproduce complete sentences. Sometimes you may want to quote just a word or phrase as part of your sentence.

For Charles Dickens the eighteenth century was both “the best of times” and “the worst of times.”

(The sample sentences so far in this section include quotations but don’t end with citations. Not every sentence with borrowed material has to contain a citation. If you draw repeatedly from a source without referring to another one, you can often wait to provide the citations until you’re done using the source in your text (see [sec. 3.5](#)). Some sources (especially online publications) lack page numbers or fixed part numbers and so offer no numbers to be cited.)

You may put a quotation at the beginning, middle, or end of your sentence or, for the sake of variety or better style, divide it by your own words.

Joseph Conrad writes of the company manager in *Heart of Darkness*, “He was obeyed, yet he inspired neither love nor fear, nor even respect.”

or

“He was obeyed,” writes Joseph Conrad of the company manager in *Heart of Darkness*, “yet he inspired neither love nor fear, nor even respect.”

If a quotation ending a sentence requires a parenthetical reference, place the sentence period after the reference.

[Punctuation with quotations: 1.3.7](#)

For Charles Dickens the eighteenth century was both “the best of times” and “the worst of times” (35).

“He was obeyed,” writes Joseph Conrad of the company manager in *Heart of Darkness*, “yet he inspired neither love nor fear, nor even respect” (87).

If a quotation extends to more than four lines when run into your text, set it off from the text as a block indented half an inch from the left margin. Do not indent the first line an extra amount or add quotation marks not present in the original. A colon introduces a quotation displayed in this way except when the grammatical connection between your introductory wording and the quotation requires a different mark of punctuation or none at all. A parenthetical reference for a prose quotation set off from the text follows the last line of the quotation.

At the conclusion of *Lord of the Flies*, Ralph, realizing the horror of his actions, is overcome by great, shuddering spasms of grief that seemed to wrench his whole body. His voice rose under the black smoke before the burning wreckage of the island; and infected by that emotion, the other little boys began to shake and sob too. (186)

If a new paragraph begins in the middle of the quotation, indent its first line.

In *Moll Flanders* Defoe follows the picaresque tradition by using a pseudoautobiographical narration:

My true name is so well known in the records, or registers, at Newgate and in the Old Bailey, and there are some things of such consequence still depending there relating to my particular conduct, that it is not to be expected I should set my name or the account of my family to this work. . . .

It is enough to tell you, that . . . some of my worst comrades, who are out of the way of doing me harm . . . know me by the name of Moll Flanders. . . .

(1)

+ Ellipses in quotations: 1.3.5

1.3.3 POETRY

If you quote part or all of a line of verse that does not require special emphasis, put it in quotation marks within your text, just as you would a line of prose. You may also incorporate two or three lines in this way, using a forward slash with a space on each side (/) to indicate to your reader where the line breaks fall.

Bradstreet frames the poem with a sense of mortality: “All things within this fading world hath end. . . .”

Reflecting on the “incident” in Baltimore, Cullen concludes, “Of all the things that happened there / That’s all that I remember.”

If a stanza break occurs in the quotation, mark it with two forward slashes (//).

The *Tao te ching*, in David Hinton’s translation, says that the ancient masters were “so deep beyond knowing / we can only

describe their appearance:// perfectly cautious, as if crossing winter streams. . . .”

Verse quotations of more than three lines should be set off from your text as a block. Unless the quotation involves unusual spacing, indent it half an inch from the left margin. Do not add quotation marks not present in the original. A verse quotation may require citing line and other division numbers, a page number, or no number, [In-text citations for verse:3.3.2](#) depending on its length and whether it is published in editions with numbered lines. The in-text citation for a verse quotation set off from the text in this way, if required, follows the last line of the quotation (as it does with prose quotations). If the citation will not fit on the same line as the end of the quotation, it should appear on a new line, flush with the right margin of the page.

In Walt Whitman's "When Lilacs Last in the Dooryard Bloom'd," the poet's gaze sweeps across the nation from east to west like the sun:

Lo, body and soul—this land,
My own Manhattan with spires, and the sparkling and
hurrying tides, and the ships,
The varied and ample land, the South and the North in
the light, Ohio's shores and flashing Missouri,
And ever the far-spreading prairies cover'd with grass
and corn. (canto 12)

A line too long to fit within the right margin should be formatted with hanging indentation, so that its continuation is indented more than the rest of the block.

If the layout of the lines in the original text, including indentation and spacing within and between them, is unusual, reproduce it as accurately as possible.

E. E. Cummings concludes the poem with this vivid description of a carefree scene, reinforced by the carefree form of the lines themselves:

it's

spring

and

the

goat-footed

balloonMan whistles

far

and

wee (16-24)

When a verse quotation begins in the middle of a line, the partial line should be positioned where it is in the original and not shifted to the left margin.

In "I Sit and Sew," by Alice Dunbar-Nelson, the speaker laments that social convention compels her to sit uselessly while her male compatriots lie in need on the battlefield:

My soul in pity flings

Appealing cries, yearning only to go

There in that holocaust of hell, those fields of woe—

But—I must sit and sew.

1.3.4 DRAMA

If you quote dialogue in a play or screenplay, set the quotation off from your text. Begin each part of the dialogue with the appropriate character's name, indented half an inch from the left margin and written in all capital letters: HAMLET. Follow the name with a period and then start the quotation. Indent all subsequent lines in that character's speech an additional amount. When the dialogue shifts to another character, start a new line indented half an inch. Maintain this pattern throughout the entire quotation.

ellipsis points, or three spaced periods. When you quote only a word or phrase, no ellipsis points are needed before or after the quotation because it is obvious that you left out some of the original sentence.

In his inaugural address, John F. Kennedy spoke of a “new frontier.”

When your quotation reads like a complete sentence, however, an ellipsis is needed at the end if the original sentence does not end there, as the following examples show. An omission in the middle of a quotation always requires an ellipsis. Whenever you omit words from a quotation, the resulting passage—your prose and the quotation integrated into it—should be grammatically complete and correct.

Omission within a Sentence

Identify an omission within a sentence by using three periods with a space before each and a space after the last (. . .).

Original

Medical thinking, trapped in the theory of astral influences, stressed air as the communicator of disease, ignoring sanitation or visible carriers.

From Barbara W. Tuchman's *A Distant Mirror: The Calamitous Fourteenth Century* (Ballantine, 1979)

Quotation with an Ellipsis in the Middle

In surveying various responses to plagues in the Middle Ages, Barbara W. Tuchman writes, “Medical thinking . . . stressed air as the communicator of disease, ignoring sanitation or visible carriers” (101-02).

When the ellipsis coincides with the end of your sentence, place a period after the last word of the quotation and then add three periods with a space before each.

Quotation with an Ellipsis at the End

In surveying various responses to plagues in the Middle Ages, Barbara W. Tuchman writes, “Medical thinking, trapped in the theory of astral influences, stressed air as the communicator of disease. . . .”

If a parenthetical reference follows the ellipsis at the end of your sentence, use three periods with a space before each, and place the sentence period after the final parenthesis.

Quotation with an Ellipsis at the End Followed by a Parenthetical Reference

In surveying various responses to plagues in the Middle Ages, Barbara W. Tuchman writes, “Medical thinking, trapped in the theory of astral influences, stressed air as the communicator of disease” (101-02).

Omission in a Quotation of More Than One Sentence

An ellipsis in the middle of a quotation can indicate the omission of any amount of text.

Original

Presidential control reached its zenith under Andrew Jackson, the extent of whose attention to the press even before he became a candidate is suggested by the fact that he subscribed to twenty newspapers. Jackson was never content to have only one organ grinding out his tune. For a time, the *United States Telegraph* and the *Washington Globe* were almost equally favored as party organs, and there were fifty-seven journalists on the government payroll.

Quotation Omitting a Sentence

In discussing the historical relation between politics and the press, William L. Rivers notes: Presidential control reached its zenith under Andrew Jackson, the extent of whose attention to the press even before he became a candidate is suggested by the fact that he subscribed to twenty newspapers. . . . For a time, the *United States Telegraph* and the *Washington Globe* were almost equally favored as party organs, and there were fiftyseven journalists on the governmentpayroll. (7)

Quotation with an Omission from the Middle of One Sentence to the End of Another

In discussing the historical relation between politics and the press, William L. Rivers notes, “Presidential control reached its zenith under Andrew Jackson. . . . For a time, the *United States Telegraph* and the *WashingtonGlobe* were almost equally favored as party organs, and there were fifty-seven journalists on the governmentpayroll” (7).

By convention, the period that marks the end of the sentence beginning “Presidential control” in the above example is placed before the ellipsis.

Quotation with an Omission from the Middle of One Sentence to the Middle of Another

In discussing the historical relation between politics and the press, William L. Rivers notes that when presidential control “reached its zenith under Andrew Jackson, . . . there were fifty-seven journalists on the governmentpayroll” (7).

Omission in a Quotation of Poetry

Use three or four spaced periods in quotations of poetry, as in quotations of prose.

Original

In Worcester, Massachusetts,
I went with Aunt Consuelo
to keep her dentist's appointment
and sat and waited for her
in the dentist's waiting room.
It was winter. It got dark
early. The waiting room
was full of grown-up people,
arctics and overcoats,
lamps and magazines.

From Elizabeth Bishop's "In the Waiting Room" (Poets.org, Academy of American Poets, www.poets.org/poetsorg/poem/waiting-room)

Quotation with an Ellipsis at the End

Elizabeth Bishop's "In the Waiting Room" is rich in evocative detail:

In Worcester, Massachusetts,
I went with Aunt Consuelo
to keep her dentist's appointment
and sat and waited for her
in the dentist's waiting room.
It was winter. It got dark
early. The waiting room
was full of grown-up people. . . .

An ellipsis is needed in this example because without it the reader would think that “people” was the last word of the original sentence.

The omission of a line or more in the middle of a poetry quotation that is set off from the text is indicated by a line of spaced periods approximately the length of a complete line of the quoted poem.

Quotation Omitting a Line or More in the Middle

Elizabeth Bishop’s “In the Waiting Room” is rich in evocative detail:

In Worcester, Massachusetts,
I went with Aunt Consuelo
to keep her dentist’s appointment
.....
It was winter. It got dark
early.

In this example, no ellipsis is needed at the end because “early” is the last word of the original sentence. The reader will not misunderstand the poem’s sentence structure. You do not need to indicate that more material appears on the line in the original.

An Ellipsis in the Source

If the author you are quoting uses ellipsis points, you should distinguish them from your ellipses by putting square brackets around the ones you add or by including an explanatory phrase in a parenthesis after the quotation.

Original

“We live in California, my husband and I, Los Angeles. . . . This is beautiful country; I have never been here before.”
From N. Scott Momaday’s *House Made of Dawn* (Harper and Row, 1977)

Quotation with an Added Ellipsis

In N. Scott Momaday’s *House Made of Dawn*, when Mrs. St. John arrives at the rectory, she tells Father Olguin, “We live in California, my husband and I, Los Angeles. . . . This is beautiful country [. . ..]” (29).

OR

In N. Scott Momaday’s *House Made of Dawn*, when Mrs. St. John arrives at the rectory, she tells Father Olguin, “We live in California, my husband and I, Los Angeles. . . . This is beautiful country” (29; 1st ellipsis in original).

1.3.6 OTHER ALTERATIONS OF QUOTATIONS

Occasionally, you may decide that a quotation will be unclear or confusing to your reader unless you provide supplementary information. For example, you may need to insert material missing from the original or add “sic” (an English word—hence not italicized—from the Latin for “thus” or “so”) to assure readers that the quotation is accurate even though the spelling or logic might make them think otherwise. You may also italicize words for emphasis. Keep such alterations to a minimum and distinguish them from the original.

A comment or an explanation that immediately follows the closing quotation mark appears in a parenthesis.

Shaw admitted, “Nothing can extinguish my interest in Shakespear” (sic).

Lincoln specifically advocated a government “for the people” (emphasis added).

A comment or an explanation that goes inside the quotation must appear within square brackets.

He claimed he could provide “hundreds of examples [of court decisions] to illustrate the historical tension between church and state.”

Milton’s Satan speaks of his “study [pursuit] of revenge.”

Similarly, if a pronoun in a quotation seems unclear, you may add an identification in square brackets.

In the first act he soliloquizes, “Why, she would hang on him [Hamlet’s father] / As if increase of appetite had grown / By what it fed on. . . .”

1.3.7 PUNCTUATION WITH QUOTATIONS

Whether incorporated into or set off from the text, quoted material is usually preceded by a colon if the quotation is formally introduced and by a comma or no punctuation if the quotation is an integral part of the sentence structure.

Shelley held a bold view: “Poets are the unacknowledged legislators of the World” (794).

“Poets,” according to Shelley, “are the unacknowledged legislators of the World” (794).

Shelley thought poets “the unacknowledged legislators of the World” (794).

Do not use opening and closing quotation marks to enclose quotations set off from the text, but reproduce any quotation marks that are in the passage quoted.

In "Memories of West Street and Lepke," Robert Lowell, a conscientious objector (or "C.O."), recounts meeting a Jehovah's Witness in prison:

I was so out of things, I'd never heard
of the Jehovah's Witnesses.

"Are you a C.O.?" I asked a fellow jailbird.

"No," he answered, "I'm a J.W." (36-39)

Use double quotation marks around quotations incorporated into the text and single quotation marks around quotations within those quotations.

In "Memories of West Street and Lepke," Robert Lowell, a conscientious objector (or "C.O."), recounts meeting a Jehovah's Witness in prison: "Are you a C.O.?" I asked a fellow jailbird. / 'No,' he answered, 'I'm a J.W.'" (38-39).

When a quotation consists entirely of material enclosed by quotation marks in the source work, usually one pair of double quotation marks is sufficient, provided that the introductory wording makes clear the special character of the quoted material.

Meeting a fellow prisoner, Lowell asks, "Are you a C.O.?" (38).

Except for changing internal double quotation marks to single ones when you incorporate quotations into your text, you should reproduce internal punctuation exactly as in the original. The closing punctuation, though, depends on where the quoted material appears in your sentence. Suppose, for example, that you want to quote the following sentence: "You've got to be carefully taught." If you begin your

sentence with this line, you need to replace the closing period with a punctuation mark appropriate to the new context.

“You’ve got to be carefully taught,” wrote Oscar Hammerstein II about how racial prejudice is perpetuated.

If the quotation ends with a question mark or an exclamation point, however, the original punctuation is retained, and no comma is required.

“How can I describe my emotions at this catastrophe, or how delineate the wretch whom with such infinite pains and care I had endeavoured to form?” wonders Victor Frankenstein in Mary

Shelley’s

Frankenstein (42).

[Preserving original](#)

[spelling:](#)

[1.3.1](#)

“What a wonderful little almanac you are, Celia!” Dorothea Brooke responds to her sister (7).

By convention, commas and periods that directly follow quotations go inside the closing quotation marks. When a quotation is directly followed by a parenthetical citation, however, any required comma or period follows the citation. Thus, if a quotation ends with a period and falls at the end of your sentence, the period appears after the reference.

N. Scott Momaday’s *House Made of Dawn* begins with an image that also concludes the novel: “Abel was running” (7).

If a quotation ends with both single and double quotation marks, the comma or period precedes both.

“The poem alludes to Stevens’s ‘Sunday Morning,’” notes Miller.

All other punctuation marks—such as semicolons, colons, question marks, and exclamation points—go outside a closing quotation mark, except when they are part of the quoted material.

Original

Have you felt so proud to get at the meaning of poems?
From Walt Whitman's "Song of Myself," in *Leaves of Grass* (McKay, 1892)

Quotations

Whitman refers to "the meaning of poems."

Where does Whitman refer to "the meaning of poems"?

but

Whitman asks, "Have you felt so proud to get at the meaning of poems?"

If a quotation ending with a question mark or an exclamation point concludes your sentence and requires a parenthetical reference, retain the original punctuation within the quotation mark and follow with the reference and the sentence period outside the quotation mark.

In Mary Shelley's *Frankenstein*, Victor Frankenstein wonders, "How can I describe my emotions at this catastrophe, or how delineate the wretch whom with such infinite pains and care I had endeavoured to form?" (42).

Dorothea Brooke responds to her sister, "What a wonderful little almanac you are, Celia!" (7).

1.3.8 TRANSLATIONS OF QUOTATIONS

If you believe that a significant portion of your audience will not understand the language of a quotation you

present, you should add a translation. Give the source of the translation in addition to the source of the quotation. In general, the translation should immediately follow the quotation whether the two passages are incorporated into or set off from the text, although the order may be reversed if it is unlikely that readers will be able to read the original. If the pair of passages are incorporated into the text, distinguish them from each other by placing the second one in double quotation marks and parentheses or in single quotation marks and not in parentheses. Separate elements in parentheses with semicolons.

At the opening of Dante's *Inferno*, the poet finds himself in "una selva oscura" ("a dark wood"; 1.2; Ciardi 28). [Citing verse by division numbers: 3.3.2](#) OR

At the opening of Dante's *Inferno*, the poet finds himself in "una selva oscura" 'a dark wood' (1.2; Ciardi 28).

If you created the translation, insert *my trans.* in place of a source in the parenthetical citation.

Sévigné responds to praise of her much admired letters by acknowledging that "there is nothing stiff about them" ("pour figées, elles ne le sont pas"; my trans.; 489).

OR

Sévigné responds to praise of her much admired letters by acknowledging that "there is nothing stiff about them" 'pour figées, elles ne le sont pas' (my trans.; 489).

If your project includes many translations that you created, it may be more convenient to introduce an endnote describing which translations are yours. The endnote would be located

immediately after your first translation. Then *my trans.* would not appear after any translation covered by the note.

Do not use quotation marks around quotations and translations set off from the text.

Dante's *Inferno* begins literally in the middle of things:

Nel mezzo del cammin di nostra vita

mi ritrovai per una selva oscura,

ché la diritta via era smarrita.

Ahi quanto a dir qual era è cosa dura

esta selva selvaggia e aspra e forte

che nel pensier rinova la paura! (1.1-6)

Midway in our life's journey, I went astray

from the straight road and woke to find myself

alone in a dark wood. How shall I say

what wood that was! I never saw so drear,

so rank, so arduous a wilderness!

Its very memory gives a shape to fear. (Ciardi 28)

Quotations from works in a language not written in the Latin alphabet (e.g., Arabic, Chinese, Greek, Hebrew, Japanese, Russian), as well as the works' titles, should be given consistently in the original writing system or in romanization. Names of persons, places, and organizations, however, are usually romanized.

As Chekhov's *The Cherry Orchard* (Вишнёвый сад) opens, Lopakhin remembers being called a "little peasant" ("мужичок") when he was a boy (4; 117-18; act 1).

Genesis 6.4 looks back to an earlier state of society: “...
”הנפלים היו בארץ בימים ההם ‘There were giants in the earth in those
days . . .’ (*Bible Hub*).

1.4 Numbers

Although there are a few well-established uses for roman numerals,

+ 1.4.4 numbers not spelled out are commonly represented by arabic numerals.

1.4.1 USE OF NUMERALS OR WORDS

In discussions that require few numbers, you may spell out numbers written in a word or two and represent other numbers by numerals (*one, thirty-six, ninety-nine, one hundred, fifteen hundred, two thousand, three million*, but $2\frac{1}{2}$, 101, 137, 1,275). To form the plural of a spelled-out number, treat the word like an ordinary noun (*sixes, sevens*).

If your project calls for frequent use of numbers, use numerals for all numbers that precede technical units of measurement (*30 inches, 5 kilograms*). In such a project, also use numerals for numbers that are presented together and that refer to similar things, such as in comparisons or reports of experimental data. Spell out other numbers if they can be written in one or two words. Large numbers may be expressed in a combination of numerals and words (*4.5 million*).

Use numerals with abbreviations or symbols (*6 lbs., 4:00 p.m., \$3.50*); in street addresses (*4401 13th Avenue*); in dates (*11 April 2006*); in decimal fractions (*8.3*); and for items in numbered series (*year 3, chapter 9, volume 1*—or, in documentation, *ch. 1* and *vol. 1*). When a

numeral falls at the start of a sentence, either spell out the number (if doing so is not awkward) or revise the sentence to place the numeral later in it.

1.4.2 COMMAS IN NUMBERS

Commas are usually placed between the third and fourth digits from the right, the sixth and seventh, and so on.

1,000

20,000

7,654,321

Commas are not used in page and line numbers, in street addresses, or in four-digit years.

1.4.3 INCLUSIVE NUMBERS

In a range of numbers, give the second number in full for numbers up to ninety-nine.

2-3

10-12

21-48

89-99

For larger numbers, give only the last two digits of the second number, unless more are necessary for clarity.

96-101

103-04

395-401

923-1,003

1,003-05

1,608-774

In a range of years beginning AD 1000 or later, omit the first two digits of the second year if they are the same

as the first two digits of the first year. Otherwise, write both years in full.

2000-03

1898-1901

In a range of years beginning from AD 1 through 999, follow the rules for inclusive numbers in general. Do not abbreviate ranges of years that begin before AD 1.

1.4.4 ROMAN NUMERALS

Use capital roman numerals for the primary divisions of an outline and as suffixes for the names of persons.

Elizabeth II

John D. Rockefeller IV

Use lowercase roman numerals for citing pages of a book that are so numbered (e.g., the pages in a preface).

Write out inclusive roman numerals in full: *xxv–xxvi*, *xlvi–xlix*.

1.5 Dates and Times

In the body of your writing, do not abbreviate dates, and be consistent in your use of either the day-month-year style (*12 January 2014*) or the month-day-year style (*January 12, 2014*). In the latter style, the comma before the year has to be balanced by one after if there is no other punctuation after the year.

October 28, 1466, is Erasmus's likely date of birth (Gleason 76).

In the list of works cited, use the day-month-year style (*12 Jan. 2014*) to minimize the number of commas. Months **maybe** abbreviated. [1.6.1](#) Dates in the works-cited list should be

given as fully as they appear in your sources. When times are available, include them as well. Times should be expressed consistently in either the twelve-hour or the twenty-four-hour clock. Include timezone information when provided.

Uncertain dates are usually indicated by a question mark.

Dickinson, Emily. "Distance Is Not the Realm of Fox." 1870?, Pierpont Morgan Library, New York. Manuscript.

Dates that are only generally known maybe described; use lowercase words rather than numerals to designate a century.

Chaucer, Geoffrey. *The Canterbury Tales*. Early fifteenth century, Bodleian Library, Oxford, Corpus Christi College MS 198.

Though lowercase in the body of your writing, seasons of the year are capitalized when part of a publication date in the works-cited list.

Belton, John. "Painting by the Numbers: The Digital Intermediate." *Film Quarterly*, vol. 61, no. 3, Spring 2008, pp. 58-65.

1.6 Abbreviations

Abbreviations are used regularly in the list of works cited and in in-text citations but rarely in the text of academic writing. If you use abbreviations, always choose accepted forms. While economy of space is important, clarity is more so. Spell out a term if the abbreviation may puzzle your readers.

Use neither periods after letters nor spaces between letters for abbreviations made up predominantly of capital letters.

BC
DVD
NJ
PhD
US

The chief exception is the initials used in the names of persons: a period and a space follow each initial unless the name is entirely reduced to initials.

JFK
J. R. R. Tolkien

Most abbreviations that end in lowercase letters are followed by periods.

ed.
pp.
vol.

In most abbreviations made up of lowercase letters that each represent a word, a period follows each letter, but no space intervenes between letters. a.m.

e.g.
i.e.

1.6.1 MONTHS

The names of months that are longer than four letters are abbreviated in the works-cited list.

Jan.
Feb.
Mar.
Apr.
Aug.
Sept.
Oct.
Nov.
Dec.

1.6.2 COMMON ACADEMIC ABBREVIATIONS

The following abbreviations are recommended for use in the works-cited list and in in-text citations. Where confusion may result, spell out the words instead. The plurals of the noun abbreviations given here other than *p.* are formed through the addition of *s* (e.g., *chs.*).

ch. chapter dept.

department ed.

edition

e.g. for example (from the Latin *exempli gratia*; set off by commas, unless preceded by a different punctuation mark) et al. and others (from the Latin *et alii*, *et aliae*, *et alia*) etc. and so forth (from the Latin *et cetera*; like most abbreviations, not appropriate in text)

i.e. that is (from the Latin *id est*; set off by commas, unless preceded by a different punctuation mark)

no. number

P Press (used in documentation in names of academic presses: “MITP”) p., pp. page, pages par. paragraph

translation

U University (also French *Université*, German *Universität*, Italian *Università*, Spanish

Universidad, etc.; used in documentation: “U of Tennessee, Knoxville”)

UP University Press (used in documentation: “Columbia

UP”) vol. volume

1.6.3 PUBLISHERS' NAMES

When you give publishers' names in the list of works cited, omit business words like *Company* (*Co.*), *Corporation* (*Corp.*), *Incorporated* (*Inc.*), and *Limited* (*Ltd.*). In the names of

academic presses, replace *University Press* with *UP* (or, if the words are separated by other words or appear alone, replace them with *U* and *P*: “U of Chicago P,” “MIT P,” “Teachers College P”). Otherwise, write publishers’ names in full.

1.6.4 TITLES OF WORKS

A title in a parenthetical citation often has to be abbreviated. [3.2.1](#) Usually the title is shortened to its initial noun phrase. Because the books of the Bible and works of Shakespeare are cited often, there are well-established abbreviations for their titles.

Bible

The following abbreviations and spelled forms are commonly used for parts of the Bible (which may be abbreviated as *Bib.*). While the Hebrew Bible and the Protestant Old Testament include the same parts in slightly different arrangements, Roman Catholic versions of the Old Testament also include works listed here under “Selected Apocrypha.”

2 WORKS CITED

Following are details and special situations not covered in part 1.

2.1 Names of Authors

The author's name should be presented last name first in the works-cited list and be copied from an authoritative location in your source. ± The guidelines below cover exceptions and complications that can crop up as you format authors' names.

2.1.1 VARIANT FORMS

The name of an author may be spelled in various ways in works you consult (e.g., Virgil, Vergil). Names from languages that do not use the Latin alphabet, like Chinese and Russian, may vary because of the systems of romanization ± used (e.g., Zhuang Zhou, Zhuangzi; Dostoyevsky, Dostoevsky). If an author's name varies, choose the variant preferred by your dictionary or another authority and list all the works by the author under that variant in your works-cited list.

A pseudonym that takes the traditional form of a first and last name should be given last name first in the works-cited list, like an author's real name. A pseudonym that does not take the traditional form should be given unchanged.

Film Crit Hulk
Tribble, Ivan

If you know the real name of an author listed under a pseudonym, you may add it in a parenthesis. Adding the real name is not essential for famous pseudonyms, like George Eliot,

Stendhal, and Mark Twain, but maybe useful for less familiar pseudonyms and is particularly desirable for online usernames.

Benton, Thomas H. (William Pannacker)
@jmittell (Jason Mittell)

If your sources include works published under an author's real name and other works published under a pseudonym of the author, either consolidate the entries under the better-known name (e.g., Mark Twain rather than Samuel Clemens) or list them separately, with a cross-reference at the real name and with the real name in a parenthesis after the pseudonym.

Bakhtin, M. M. (*see also* Vološinov, V. N.). *The Dialogic Imagination: Four Essays*. Edited by Michael Holquist, translated by Caryl Emerson and Holquist, U of Texas P, 1981.

Vološinov, V. N. (M. M. Bakhtin). *Marxism and the Philosophy of Language*. Translated by Ladislav Matejka and I. R. Titunik, Harvard UP, 1986.

In the example for *The Dialogic Imagination: Four Essays*, one of the translators' names appears as a surname alone (Holquist), because his name has previously been given in full in the entry.

If works are published under an author's married and birth names, list each work under the appropriate name; you may include cross-references at both names.

Penelope, Julia (*see also* Stanley, Julia P.). "John Simon and the 'Dragons of Eden.'" *College English*, vol. 44, no. 8, Dec. 1982, pp. 848-54. *JSTOR*, www.jstor.org/stable/377341.

Stanley, Julia P. (*see also* Penelope, Julia). "'Correctness,' 'Appropriateness,' and the Uses of

2.1.2 TITLES AND SUFFIXES

In general, omit titles, affiliations, and degrees that precede or follow names.

In Source Work

Anthony T. Boyle, PhD

Sister Jean Daniel

Sir Walter Scott

Saint Teresa de Jesús

In Works-Cited List

Boyle, Anthony T.

Daniel, Jean

Scott, Walter

Jr.

2.1.3 CORPORATE AUTHORS

+ [Corporate authors in in-text citations: 3.1.2](#)

A work maybe created by a corporate author—an institution, an association, a government agency, or another kindof organization. When a work’s author and publisher are separate organizations, givebothnames, starting the entry withthe one that is the author. When an organization is both author and publisher, begin the entry withthe work’s title,

skipping the author element, and list the organization only as publisher. Do not include *The* before the name of any organization in the works-cited list.

When an entry starts with a government agency as the author, begin the entry with the name of the government, followed by a comma and the name of the agency. Between them, name any organizational units of which the agency is part (as, e.g., the House of Representatives is part of Congress). All the names are arranged from the largest entity to the smallest.

California, Department of Industrial Relations
United States, Congress, House

If you are documenting two or more works by the same government, substitute three hyphens for any name repeated from the author in the previous entry.

United States, Congress,
House. ---, ---, Senate.
---, Department of Health and Human Services, Centers for Disease
Control and Prevention.

Below are sample entries for government publications.

The Adirondack Park in the Twenty-First Century. Commission on the
Adirondacks in the Twenty-First Century, New York State, 1990.

*Foreign Direct Investment, the Service Sector, and International
Banking.* Centre on Transnational Corporations, United Nations,
1987.

Great Britain, Ministry of Agriculture, Fisheries, and Food. *Our
Countryside, the Future: A Fair Deal for Rural England.* Her
Majesty's Stationery Office, 2000.

New York State, Committee on State Prisons. *Investigation of the New
York State Prisons.*
1883. Arno Press, 1974.

United Nations. *Consequences of Rapid Population Growth in Developing Countries*. Taylor and Francis, 1991.

At the end of entries for congressional publications, you may optionally include the number and session of Congress, the chamber (Senate or House of Representatives), and the type and number of the publication. Types of congressional publications include bills, resolutions, reports, and documents. If your project involves the use of many congressional publications, consult *The Chicago Manual of Style* for specialized guidelines on documenting them.

Poore, Benjamin Perley, compiler. *A Descriptive Catalogue of the Government Publications of the United States, September 5, 1774-March 4, 1881*. Government Printing Office, 1885. 48th Congress, 2nd session, Miscellaneous Document 67.

United States, Congress, House, Permanent Select Committee on Intelligence. *Al-Qaeda: The Many Faces of an Islamist Extremist Threat*. Government Printing Office, 2006. 109th Congress, 2nd session, House Report 615.

2.2 Titles

Titles should be stated in full in the works-cited list, including any subtitles. Regardless of where a title appears in your project—in the main text or in the works-cited list—its capitalization, punctuation, and presentation in italics or in quotation marks [1.2](#) should be consistent.

2.2.1 INTRODUCTION, PREFACE, FOREWORD, OR AFTERWORD

To document an introduction, a preface, a foreword, or an afterword that is titled only with a descriptive term, capitalize the term in the works-cited list but neither italicize it nor enclose it in quotation marks.

Felstiner, John. Preface. *Selected Poems and Prose of Paul Celan*, by Paul Celan, translated by Felstiner, W. W. Norton, 2001, pp. xix-xxxvi. Last name only

The descriptive term remains capitalized if needed in an in-text citation

3.2.2

if

discussion.

but is lowercase used in a text

1.2.2

If the introduction, preface, foreword, or afterword has a unique title as well as a descriptive one, give the unique title, enclosed in quotation marks, immediately before the descriptive one.

Wallach, Rick. "Cormac McCarthy's Canon as Accidental Artifact." Introduction. *Myth, Legend, Dust: Critical Responses to Cormac McCarthy*, edited by Wallach, Manchester UP, 2000, pp. xiv-xvi.

Then the unique title (or a short version of it) is given in an in-text citation if a title is needed.

2.2.2 TRANSLATIONS OF TITLES

In the works-cited list, translations of titles not in English, when needed for clarification, are placed in square brackets.

Šklovskij, Viktor. “Искусство, как прием” [“Art as Device”]. О теории прозы [*On the Theory of Prose*], 2nd reprint, 1929, Ardis Publishers, 1985, pp. 7-23.

2.3 Versions

+ Definition of a version

When citing versions in the works-cited list, write ordinal numbers with arabic numerals (*2nd*, *34th*) and abbreviate *revised* (*rev.*) and *edition* (*ed.*).

+ 1.6.2 Descriptive terms for versions, such as *expanded ed.* and *2nd ed.*, are written all lowercase, except that an initial letter directly following a period is capitalized.

Cheyfitz, Eric. *The Poetics of Imperialism: Translation and Colonization from The Tempest to Tarzan*. Expanded ed., U of Pennsylvania P, 1997.

By contrast, names like Authorized King James Version and Norton Critical Edition are proper nouns (names of unique things) and are therefore capitalized like titles. [1.2.1 Words in them](#) are not abbreviated.

The Bible. Authorized King James Version, Oxford UP, 1998.

Wollstonecraft, Mary. *A Vindication of the Rights of Woman*. Edited by Deidre Shauna Lynch, Norton Critical Edition, 3rd ed., W. W. Norton, 2009.

2.4 Publisher

The identity of a book’s publisher maybe unclear if more than one organization is named on the title page. The examples on [pages 108–09](#) show how you can use evidence on the title page to determine the publisher.

Determining the Publisher of a Book

Copublisher

If more than one independent organization is identified in the source the names, following the order shown in the source and separating the slash. Below, for example, are two excerpts from title pages, followed by the publishers' names as recorded in the works-cited

Divisi

If the title page contains the names of a parent company and of only the division. In the example at right, "Group" indicates that "Taylor name of a combination of companies, of which Routledge is

LIVERIGHT PUBLISHING CORPORATION
A Division of W. W. Norton & Company
New York • London

 **Routledge**
Taylor & Francis Group
LONDON AND NEW YORK

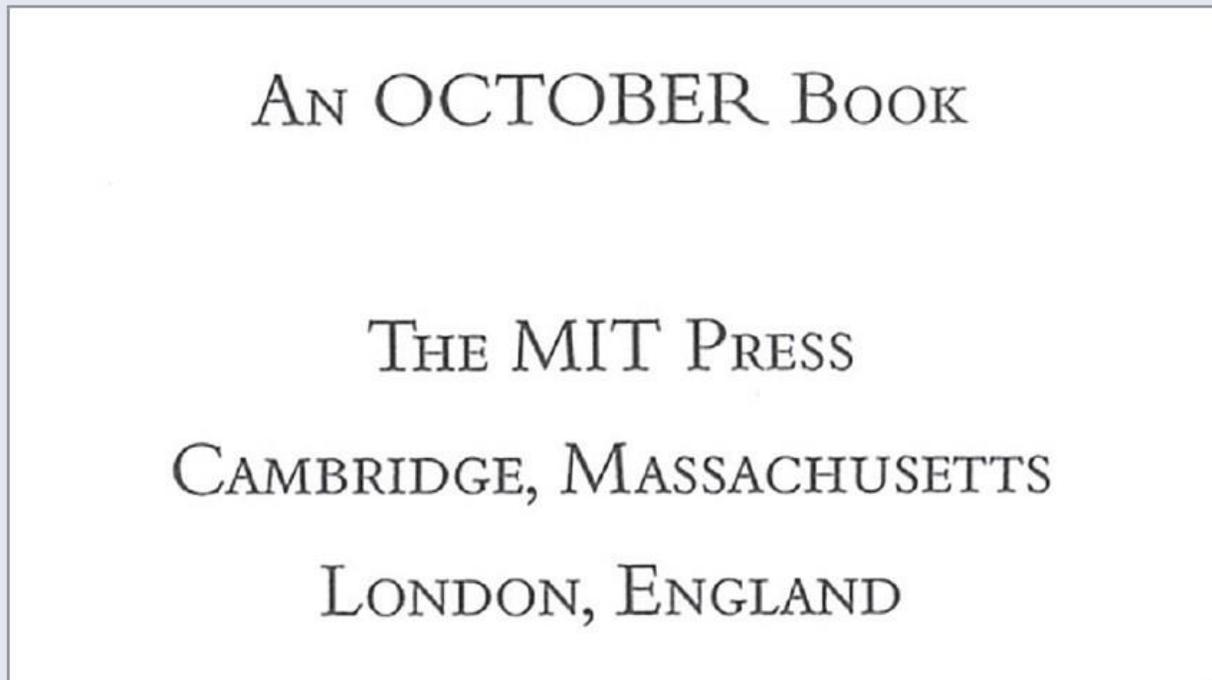

Liveright Publishing

Routledge

Imp

If the title page contains an imprint (a kind of brand name that the publisher uses for its publications), as well as the publisher's name, omit the imprint. The imprint on the title page may help you identify imprints. Given a title page with the imprint "An October Book" you would omit "An October Book"—an imprint.

MIT P

The wording and design of the excerpt below suggest that Vintage is a brand name named along with a division (Vintage Books) and a parent company. The name of the division should be

2.5 Locational Elements

+ Definition of a location

2.5.1 PLUS SIGN WITH PAGE NUMBER

If a work in a periodical (journal, magazine, newspaper) is not printed on consecutive pages, include only the first page number and a plus sign, leaving no intervening space.

Williams, Joy. "Rogue Territory." *The New York Times Book Review*, 9 Nov. 2014, pp. 1+.

2.5.2 URLS AND DOIS

When giving a URL, copy it in full from your Web browser, but omit *http://* or *https://*. Avoid citing URLs produced by shortening services (like bit.ly), since such a URL may stop working if the service that produced it disappears.

Articles in journals are often assigned DOIs, or digital object identifiers. A DOI will continue to lead to an object online even if the URL changes. DOIs consist of a series of digits (and sometimes letters), such as 10.1353/pmc.2000.0021. When possible, cite a DOI (preceded by *doi:*) instead of a URL.

Chan, Evans. "Postmodernism and Hong Kong Cinema." *Postmodern Culture*, vol. 10, no. 3, May 2000. *Project Muse*, doi:10.1353/pmc.2000.0021.

2.6 Punctuation in the Works-Cited List

With a few exceptions, listed below, the punctuation in entries in the works-cited list is restricted to commas and periods. Periods are used after the author, after the title of the source, and at the end of the information for each container.

Commas are used mainly with the author's name ± and between elements within each container.

2.6.1 SQUARE BRACKETS

When a source does not indicate necessary facts about its publication, such as the name of the publisher or the date of publication, supply as much of the missing information as you can, enclosing it in square brackets to show that it did not come from the source. If a publication date that you supply is only approximated, put it after *circa* (“around”).

[circa 2008]

If you are uncertain about the accuracy of the information that you supply, add a question mark.

[2008?]

If the city of publication is not included in the name of a locally published newspaper, add the city, not italicized, in square brackets after the name.

The Star-Ledger [Newark]

You need not add the city of publication to the name of a nationally published newspaper (e.g., *The Wall Street Journal*, *The Chronicle of Higher Education*).

2.6.2 FORWARD SLASH

When a source presents multiple pieces of information for a single element in the entry—for instance, when more than one publisher is named [2.4](#)—separate them with a forward slash.

Tomlinson, Janis A., editor. *Goya: Images of Women*. National Gallery of Art / Yale UP, 2002.

2.7 Formatting and Ordering the Works-Cited List

The entries you create for your sources are gathered into a list, with the heading “Works Cited.” (If the list contains only one entry, make the heading “Work Cited.”) In a research paper, this list is usually placed at the end, after any endnotes. In other forms of academic work, the list may appear elsewhere. [4](#)

Format the works-cited list so that the second and subsequent lines of each entry are indented half an inch from the left margin. This format, called *hanging indention*, helps the reader spot the beginning of each entry. When the creation of hanging indention is difficult—in certain digital contexts, for instance—leaving extra space between entries will serve the same purpose. The list is arranged in alphabetical order by the term that comes first in each entry: usually the author’s last name but sometimes, when there is no author name, the title of the source.

2.7.1 LETTER-BY-LETTER ALPHABETIZATION

The alphabetical ordering of entries that begin with authors’ names is determined by the letters that come before the commas

separating the authors' last and first names. Other punctuation marks and spaces are ignored. The letters following the commas are considered only when two or more last names are identical.

Descartes, René
De Sica, Vittorio

MacDonald, George
McCullers, Carson

Morris, Robert
Morris, William
Morrison, Toni

Saint-Exupéry, Antoine
de St. Denis, Ruth

Accents and other diacritical marks should be ignored in alphabetization: for example, *é* is treated the same as *e*. Special characters, such as @ in an online username, are also ignored.

2.7.2 MULTIPLE WORKS BY ONE AUTHOR

To document two or more works by the same author, give the author's name in the first entry only. Thereafter, in place of the name, type three hyphens. They stand for exactly the same name as in the preceding entry.

The three hyphens are usually followed by a period and then by the source's title. If the person named performed a role other than creating the work's main content, however, place a comma after the three hyphens and enter a term describing the role (*editor*, *translator*, *director*, etc.) before moving on to the title. If the same person performed such a role for two or more listed works, a suitable label

for that role must appear in each entry. Multiple sources by the same person are alphabetized by their titles; terms describing the person's roles are not considered in alphabetization.

- Boroff, Marie. *Language and the Poet: Verbal Artistry in Frost, Stevens, and Moore*. U of Chicago P, 1979.
- , translator. *Pearl: A New Verse Translation*. W. W. Norton, 1977.
- . "Sound Symbolism as Drama in the Poetry of Robert Frost." *PMLA*, vol. 107, no. 1, Jan. 1992, pp. 131-44. *JSTOR*, www.jstor.org/stable/462806.
- , editor. *Wallace Stevens: A Collection of Critical Essays*. Prentice-Hall, 1963.

If a single author cited in one entry is also the first of multiple authors in the next entry, repeat the name in full; do not substitute three hyphens. Repeat the name in full whenever you cite the same person as part of a different team of authors.

- Tannen, Deborah. *Talking Voices: Repetition, Dialogue, and Imagery in Conversational Discourse*. 2nd ed., Cambridge UP, 2007. *Studies in Interactional Sociolinguistics* 26.
- . *You're Wearing That? Understanding Mothers and Daughters in Conversation*. Ballantine Books, 2006.
- Tannen, Deborah, and Roy O. Freedle, editors. *Linguistics in Context: Connecting Observation and Understanding*. Ablex Publishing, 1988.
- Tannen, Deborah, and Muriel Saville-Troike, editors. *Perspectives on Silence*. Ablex Publishing, 1985.

2.7.3 MULTIPLE WORKS BY COAUTHORS

If two or more entries citing coauthors ± begin with the same name, alphabetize them by the last names of the second authors listed.

Scholes, Robert, and Robert Kellogg
Scholes, Robert, and Eric S. Rabkin

To document two or more works by the same coauthors whose names appear in a consistent order in the works, give the names in the first entry only. Thereafter, in place of the names, type three hyphens, followed by a period and the title. The three hyphens stand for exactly the same names, in the same order, as in the preceding entry.

Gilbert, Sandra M., and Susan Gubar, editors. *The Female Imagination and the Modernist Aesthetic*. Gordon and Breach Science Publishers, 1986.

---. "Sexual Linguistics: Gender, Language, Sexuality." *New Literary History*, vol. 16, no. 3, Spring 1985, pp. 515-43. *JSTOR*, www.jstor.org/stable/468838.

If the coauthors' names do not appear in the same order in the source works, record the names as found in the works and alphabetize the entries accordingly.

2.7.4 ALPHABETIZING BY TITLE

The alphabetization of an entry is based on the work's title in two situations. When no author is named at the start of the entry, ± the title determines the placement of the entry in the works-cited list. When the work's author appears at the start of more than one entry, [2.7.2](#) the title determines the placement of the entry under the author's name.

Alphabetize titles letter by letter, [2.7.1](#) ignoring any initial *A*, *An*, or *The* or the equivalent in other languages. For example, the title *An Encyclopedia of the Latin American Novel* would be alphabetized under *e* rather than *a* and the title *Le théâtre en France au Moyen Âge* under *t* rather than *l*.

If the title begins with a numeral, alphabetize the title as if the numeral were spelled out. For instance, *1914: The Coming of the First World War* should be alphabetized as if it began with “Nineteen Fourteen.”

2.7.5 CROSS-REFERENCES

To avoid unnecessary repetition in citing two or more sources from a collection of works such as an anthology, you may create a complete entry for the collection and cross-reference individual pieces to that entry. In a cross-reference, give the author and the title of the source; a reference to the full entry for the collection, usually consisting of the name or names starting the entry, followed by a short form of the collection’s title, if needed; a comma; and the inclusive page or reference numbers.

Agee, James. “Knoxville: Summer of 1915.” Oates and Atwan, pp. 171-75.

Angelou, Maya. “Pickin Em Up and Layin Em Down.” Baker, *Norton Book*, pp. 276-78.

- Walker, Alice. "Looking for Zora." Oates and Atwan, pp. 395-411.

3 IN-TEXT CITATIONS

The goals of the in-text citation are brevity and clarity, guiding the reader as unobtrusively as possible to the corresponding entry in the works-cited list. Following are special situations not covered in part 1.

3.1 Author

3.1.1 COAUTHORS

If the entry in the works-cited list begins with the names of two authors, ± include both last names in the in-text citation, connected by *and*.

(Dorris and Erdrich 23)

If the source has three or more authors, ± the entry in the works-cited list begins with the first author's name followed by *et al*. The in-text citation follows suit.

(Burdick et al. 42)

3.1.2 CORPORATE AUTHOR

When a corporate author 2.1.3 is named in a parenthetical citation, abbreviate terms that are commonly abbreviated, 1.6.2 such as *Department (Dept.)*. If the corporate author is identified in the works-cited list by the names of administrative units separated by commas, give all the names in the parenthetical citation.

In 1988 a federal report observed that the “current high level of attention to child care is directly attributable to the new workforce trends” (United States, Dept. of Labor 147).

United States, Department of Labor. *Child Care: A Workforce Issue*.
 Government Printing Office, 1988.

3.2 Title

3.2.1 ABBREVIATING TITLES OF SOURCES

When a title is needed in a parenthetical citation, abbreviate the title if it is longer than a noun phrase. For example, *Faulkner's Southern Novels* consists entirely of a noun phrase (a noun, *novels*, preceded by two modifiers) and would not be shortened. By contrast, *Faulkner's Novels of the South* can be shortened to its initial noun phrase, *Faulkner's Novels*. The abbreviated title should begin with the word by which the title is alphabetized. If possible, give the first noun and any preceding adjectives, while excluding any initial article: *a*, *an*, *the*.

And Quiet Flows the Don

Abbreviations

And
Can
Under

In some kinds of studies, it is necessary to cite the books of the Bible or the works of Shakespeare frequently—for instance, studies tracing a theme in the Bible or in Shakespeare’s plays. There are well-established abbreviations for the titles of these works, [1.6.4](#) which you may use to make your citations concise. First, create an entry in the works-cited list for the edition of the Bible or of Shakespeare’s works that you used. Then, when you borrow from the edition, use the relevant title abbreviation, along with the part numbers, [3.3.2](#) in the parenthetical citation (unless you’ve mentioned the title in your text): for example, “1 Chron. 21.8” or “Rev. 21.3,” for the Bible, and “*Oth.* 4.2.7–13” or “*Mac.* 1.5.17,” for

Shakespeare.

3.2.2 DESCRIPTIVE TERMS IN PLACE OF TITLES

If a work is identified in the works-cited list by a descriptive term,

+ When a source is untitled [2.2.1](#) not by a unique title, cite the term or a shortened version of it [3.2.1](#) in place of the title if a title needs to be included in a parenthetical citation. The descriptive term should be capitalized exactly as in the works-cited list and be neither italicized nor enclosed in quotation marks.

Margaret Drabble describes how publishers sometimes pressured Lessing to cut controversial details from her work—or to add them (Introduction xi-xii).

Americans’ “passion for material objects” reached a “climactic moment in the 1880sand 1890s” (Werner, Review 622).

3.3 Numbers in In-Text Citations

3.3.1 STYLE OF NUMERALS

When you cite pages in a print work, use the same style of numerals as in the source—whether roman (traditionally used in the front matter of books), arabic, or a specialized style, like *AI* (sometimes found in newspapers). Use arabic numerals in all your other references to divisions of works (volumes, sections, books, chapters, acts, scenes, etc.), even if the numbers appear otherwise in the source.

If you borrow from only one volume of a multivolume work, the number of the volume is specified in the entry

in the works-cited list + and does not need to be included in the in-text citations. If you borrow from more than one volume, include a volume number as well as a page reference in the in-text citations, separating the two with a colon and a space. Use neither the words *volume* and *page* nor their abbreviations. The functions of the numbers in such a citation are understood.

As Wellek admits in the middle of his multivolume history of modern literary criticism, “An evolutionary history of criticism must fail. I have come to this resigned conclusion”(5: xxii).

Work Cited

Wellek, René. *A History of Modern Criticism, 1750-1950*. Yale UP, 1955-92. 8 vols.
+ Total number of volumes

If you refer parenthetically to an entire volume of a multivolume work, place a comma after the author’s name and include the abbreviation *vol.*

Between 1945 and 1972, the political-party system in the United States underwent profound changes (Schlesinger, vol. 4).

Work Cited

Schlesinger, Arthur M., Jr., general editor. *History of U.S. Political Parties*. Chelsea House Publishers, 1973. 4 vols.

If you integrate such a reference into a sentence, spell out *volume*: “In volume 2, Wellek deals with”

3.3.2 NUMBERS IN WORKS AVAILABLE IN MULTIPLE EDITIONS

Commonly studied literary works are frequently available in more than one edition. In citations of a work available in

multiple editions, it is often helpful to provide division numbers in addition to, or instead of, page numbers, so that readers can find your references in any edition of the work.

Modern Prose Works

In a reference to a commonly studied modern prose work, such as a novel or a play in prose, give the page number first, add a semicolon, and then give other identifying information, using appropriate abbreviations:

+ [1.6.2](#) “(130; ch. 9),” “(271; book 4, ch. 2).”

In *A Vindication of the Rights of Woman*, Mary Wollstonecraft recalls many “women who, not led by degrees to proper studies, and not permitted to choose for themselves, have indeed been overgrown children” (185; ch. 13, sec. 2).

Willy Loman admits to his wife, “I have such thoughts, I have such strange thoughts” (Miller 9; act 1).

Modern Verse Works

Editions of commonly studied poems and verse plays sometimes provide line numbers in the margins. In citing works in verse with line numbering, omit page numbers altogether and cite by division (act, scene, canto, book, part) and line, separating the numbers with periods—for example, “*Iliad* 9.19” refers to book 9, line 19, of Homer’s *Iliad*. If you are citing only line numbers, do not use the abbreviation *l.* or *ll.*, which can be confused with numerals. Instead, in your first citation, use the word *line* or *lines* and then, having

established that the numbers designate lines, give the numbers alone.

According to the narrator of Felicia Hemans's poem, the emerging prisoners "had learn'd, in cells of secret gloom, / How sunshine is forgotten!" (lines 131-32).

One Shakespearean protagonist seems resolute at first when he asserts, "Haste me to know't, that I, with wings as swift / As meditation . . . / May sweep to my revenge" (*Ham.* 1.5.35-37), but he soon has second thoughts; another tragic figure, initially described as "too full o' th' milk of human kindness" (*Mac.* 1.5.17), quickly descends into horrific slaughter.

Do not count lines manually if no line numbers are present in the source; doing so would obligate your reader to do the same. Instead, cite page numbers or another explicit division numbering, if available (e.g., "canto 12"). If the work is a poem that occupies a page or less in the source edition, there is no need to cite line numbers or any other numbers in your text. (The poem's page number will appear in the works-cited list if the source is printed.)

If the work contains a mixture of prose and verse, determine which form of writing is predominant and use the corresponding citation format. For example, Shakespeare's plays are usually treated as works in verse, although they contain prose passages.

Greek, Roman, and Medieval Works

Works in prose and verse from ancient Greece and Rome, as well as some medieval texts, are generally not cited by page number alone. The text's division numbers are given.

The divisions cited may differ from one work to another. For example, Aristotle's works are commonly cited by the page, column, and line in a landmark 1831 edition of the Greek text. Thus, "1453a15–16" means lines 15–16 of the left-hand column ("a") on page 1453 of the 1831 edition. These indicators appear in the margins of modern editions of Aristotle's works.

Scripture

When documenting scripture, provide an entry in the works-cited list for the edition you consulted. While general terms like Bible, Talmud, and Koran are not italicized, full and shortened titles of specific editions are italicized. [1.2.2](#) The first time you borrow from a particular work of scripture in your project, state in the text or in a parenthetical citation the element that begins the entry in the works-cited list (usually the title of the edition but sometimes an editor's or a translator's name). Identify the borrowing by divisions of the work—for the Bible, give the abbreviated name of the book [3.2.1](#) and chapter and verse numbers—rather than by a page number. Subsequent citations of the same edition may provide division numbers alone.

In one of the most vivid prophetic visions in the Bible, Ezekiel saw "what seemed to be four living creatures," each with the faces of a man, a lion, an ox, and an eagle (*New Jerusalem Bible*, Ezek. 1.5-10). John of Patmos echoes this passage when describing his vision (Rev. 4.68).

Work Cited

The New Jerusalem Bible. General editor, Henry Wansbrough, Doubleday, 1985.

3.3.3 OTHER CITATIONS NOT INVOLVING PAGE NUMBERS

Other kinds of sources may employ location indicators besides page numbers. An e-book (a work formatted for reading on an electronic device) may include a numbering system that tells users their location in the work. Because such numbering may vary from one device to another, do not cite it unless you know that it appears consistently to other users. If the work is divided into stable numbered sections like chapters, the numbers of those sections may be cited, with a label identifying the type of part that is numbered.

According to Hazel Rowley, Franklin and Eleanor Roosevelt began their honeymoon with a week's stay at Hyde Park (ch. 2).

Part numbers in any source should be cited only if they are explicit (visible in the document) and fixed (the same for all users of the document). Do not count unnumbered parts manually. A source without page numbers or any other form of explicit, fixed part numbering must be cited as a whole: include in the text or in a parenthesis enough information for the reader to find the corresponding entry in the works-cited list—usually the author's last name.

3.4 Indirect Sources

Whenever you can, take material from the original source, not a secondhand one. Sometimes, however, only an indirect source is available—for example, an author's published account of someone's spoken remarks. If what you quote or paraphrase is itself a quotation, put the abbreviation *qtd. in* (“quoted in”) before the indirect source you cite in your parenthetical

reference. (You may wish to clarify the relation between the original and secondhand sources in a note.)

Samuel Johnson admitted that Edmund Burke was an “extraordinary man” (qtd. in Boswell 2: 450).

3.5 Repeated Use of Sources

When you borrow from a source several times in succession, you may be able to make your citations more concise by using one of the following techniques. Always give your citations in full, however, if these techniques would create ambiguity about your sources.

If you borrow more than once from the same source within a single paragraph and no other source intervenes, you may give a single parenthetical reference after the last borrowing.

Romeo and Juliet presents an opposition between two worlds: “the world of the everyday . . . and the world of romance.” Although the two lovers are part of the world of romance, their language of love nevertheless becomes “fully responsive to the tang of actuality” (Zender 138, 141).

This structure makes clear that the first page number in the parenthesis applies to the first quotation and the second number to the second quotation.

But suppose you decide to break the first quotation into two parts, instead of using an ellipsis. Then the parenthetical citation will be ambiguous, because three quotations will be followed by two numbers. It will not be clear how the page numbers should be matched to the borrowings. In that case, the

citations should be separated. You can use another technique for making citations more economical—not repeating what is understood.

Romeo and Juliet presents an opposition between two worlds: “the world of the everyday,” associated with the adults in the play, and “the world of romance,” associated with the two lovers (Zender 138). Romeo and Juliet’s language of love nevertheless becomes “fully responsive to the tang of actuality” (141).

The second parenthetical citation, “(141),” omits the author’s name. This omission is acceptable because the reader can only conclude that the author is Zender. If you include material from a different source between the two borrowings, however, you must repeat this author’s name in the second citation: “(Zender 141).”

A third technique is to define a source in the text at the start.

According to Karl F. Zender, *Romeo and Juliet* presents an opposition between two worlds: “the world of the everyday,” associated with the adults in the play, and “the world of romance,” associated with the two lovers (138). Romeo and Juliet’s language of love nevertheless becomes “fully responsive to the tang of actuality” (141).

This technique can be useful when an entire paragraph is based on material from a single source. When a source is stated in this way and followed by a sequence of borrowings, it is important to signal at the end of the borrowings that you are switching to another source or to your own ideas.

According to Karl F. Zender, *Romeo and Juliet* presents an opposition between two worlds: “the world of the everyday,” associated

with the adults in the play, and “the world of romance,” associated with the two lovers (138). Romeo and Juliet’s language of love nevertheless becomes “fully responsive to the tang of actuality” (141). I believe, in addition, that . . .

3.6 Punctuation in the In-Text Citation

No punctuation is used in a basic parenthetical citation, consisting of a number or of an author’s last name and a number. When parenthetical citations are more complex, they must be punctuated for clarity.

Citations of multiple sources in a single parenthesis are separated by semicolons.

(Baron 194; Jacobs 55)

Citations of different locations in a single source are separated by commas.

(Baron 194, 200, 197-98)

In a citation of multiple works by the same author, [2.7.2](#) the titles (shortened if necessary) [3.2.1](#) are joined by *and* if there are two; otherwise, they are listed with commas and *and*.

(Glück, “Ersatz Thought” and “For”)

(Glück, “Ersatz Thought,” “For,” and Foreword)

Your explanation of how you altered a quotation is separated from the citation by a semicolon.

(Baron 194; my emphasis) [1.3.6](#)

(29; 1st ellipsis in original) [1.3.5](#)

If the number in a citation is not a page number or line number, ± it is usually preceded by a label

identifying the type of part that is numbered. A comma separates such a reference from the author's name.

(Chan, par. 41)

(Rowley, ch. 2)

In a citation of commonly studied literature, [3.3.2](#) a semicolon separates a page number from other part references. The other part references are separated by a comma.

(185; ch. 13, sec. 2)

When a quotation from a non-English work is given bilingually, [1.3.8](#) a parenthesis may begin with the translation or the original version and continue with the sources of the two versions. All these elements are separated by semicolons.

At the opening of Dante's *Inferno*, the poet finds himself in "una selva oscura" ("a dark wood"; 1.2; Ciardi 28).

If a parenthetical citation falls in the same place in your text as another kind of parenthesis, do not put the two parentheses side by side. Instead, enclose both pieces of information in a single parenthesis, placing the more immediately relevant one first and enclosing the other in square brackets.

In *The American Presidency*, Sidney M. Milkis and Michael Nelson describe how "the great promise of the personal presidency was widely celebrated" during Kennedy's time in office—a mere thousand days (20 January 1961–22 November 1963 [325]).

4 CITATIONS IN FORMS OTHER THAN PRINT

Throughout its history, the *MLA Handbook* has focused on the production of scholarship in traditional, printed form. Before the eighth edition, the title declared that the handbook was for “writers of research papers,” and the contents gave advice on structuring and formatting such papers. Today academic work can take many forms other than the research paper. Scholars produce presentations, videos, and interactive Web projects, among other kinds of work. Where these projects rely on the work of other authors, however, they should still include information about their sources.

How to include such information in projects other than the research paper is not yet a settled matter, but we offer a few suggestions. The standards for source documentation in nonprint forms are certain to change as media themselves change, but the aims will remain the same: providing the information that enables a curious reader, viewer, or other user to track down your sources and giving credit to those whose work influenced yours.

In a **slide-based presentation** using software such as *PowerPoint* or *Keynote*, we suggest including brief citations on each slide that uses borrowed material (quotations, paraphrases, images, videos, and whatever else you copy or adapt) and adding a works-cited list on a slide at the end. You might also offer printed copies of your works-cited list to your audience, if the venue of the presentation allows for them, or post the list online and include its URL on your works-cited slide.

In a **video**, you might overlay text at the bottom of the screen to provide your viewers with brief information about

what they're seeing (the producer and title of a borrowed video clip, for instance, or the name of a person being interviewed) and include full documentation in your closing credits.

In a **project on the Web**, you might link from your citations to the online materials you cite, allowing a reader to follow references of interest. A works-cited list remains desirable as an appendix to the project, since it gives the reader an organized account of the full range of your sources.
